BASICS • CHAPTER 1

What is 2DFD?

LAST CHECKED 3 NOVEMBER 2026 • 5 MINUTES TO READ

2DFD is online findom with a 2D persona. She's fiction. The money, the time and the consent are real.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 2DFD is findom with a drawn or generated persona. You never see a real face or hear a real voice.

02 She's fiction. Your money, your time and your feelings are real.

03 A tribute guarantees nothing, and nobody can make a dom keep a promise made in a scene.

04 The drawing mostly protects the dom. You can't know who's behind it.

05 Set your own limit before you play, and stick to it.

YOU WILL LEARN

- ✓ What 2DFD means, and how it differs from findom with a real face.
- ✓ What a 2DFD persona usually offers.
- ✓ What stays real when the dom is drawn.

✓ The four rules this wiki asks every reader to keep.

PART 01

The short definition

2DFD is online findom with a 2D persona. She has a name, a look, a way of writing and a set of rules. Somebody writes her, and you'll almost never know who. ◆

Findom itself, short for financial domination, is a fetish where someone gets pleasure from giving money to a dom online. ◆ Researchers describe it as a subculture where a findomme gets paid in cash or in wishlist gifts. ◆

V

VIVIAN'S FIELD NOTES

In this wiki, 2DFD means a persona who exists only as pictures, text and tools. The persona is the product.

◆

Research on findom is scarce, its own authors say. ◆ This wiki couldn't find any study or glossary of 2DFD as of 2026-11-03, so most of what follows comes from experience and is marked that way. ◆

PART 02

What is drawn and what is real

	In 2DFD	What it means for you
Face and voice	Drawn or generated	Nothing to recognise or check
Her life and feelings	Written, like a role	Fiction, even when it feels personal
The person behind her	Hidden	Could be anyone
Your money	Real	Gone the moment you send it
Your time and attention	Real	They count as much as the money
Consent and limits	Real	The only thing that keeps it a game
The dom's payout	Tied to a real identity	Her anonymity ends where the money lands

The drawing mostly protects the dom. There's no face, photo or voice to steal, recognise or blackmail her with. The risk just moves. For the dom, it moves to payment platforms and social accounts, which can close or freeze. For you, it

moves to trust: you can't know who's behind her, and her life story is part of the role. ◆

V VIVIAN'S FIELD NOTES

It's often a man, even if they tell you they're a girl. Pics, voices, all of it can be faked, or someone they know can do it for them. ◆ People get tricked like this all the time.

PART 03

Why a drawn dom

For a sub, a drawn dom is a fantasy no real person's life gets in the way of. She never has a bad day on camera, never ages and has no private life to wonder about. For a dom, the character is a mask nobody can steal, and art can be made in volume in a way photos can't. ◆

That also makes a character easy to copy and fake. In classic findom, press reports describe scammers using stolen photos of women. ◆ In 2DFD they use stolen or generated art, so a beautiful character proves nothing about who runs her. ◆ See Spot a fake dom.

PART 04

What a 2DFD persona usually offers

A 2DFD persona offers some of these, rarely all of them. ◆

- Tributes and sends: gifts from a wishlist, sent as homage. See Tributes, sends and wishlists.
- Techdom: tools the sub installs that act for the dom, always with a limit and a stop he controls. See Techdom.
- Gamedom: play around games and game accounts. See Gamedom.
- Hypno and edits: looping images, spirals and captions. See Hypno and edits.
- Games and casino play: games where the house wins, best played with fictional chips. See Games and casino play.
- Roleplay, lore and collabs: a story around the character, and events with other doms. See Roleplay, lore and collabs.
- Tasks and customs: small orders, and content made on request. See Tasks, customs and private sessions.

Not every dominant character wants money. Some personas are pure roleplay and expect nothing, so ask early whether money is part of it. ◆

PART 05

What stays real

A tribute guarantees nothing. A tribute is a gift for a moment of play, and once it's sent, it's gone. A dom can promise you anything. Nothing forces her to deliver. ◆

Send because you want to. Never because something was promised.

A few people bring in most of the money. In my experience, most doms earn little, and most of the money in the scene comes from a small number of subs, often at their worst: late at night, after a relapse, in a burst they regret. A business

that lives on those moments has a reason to want them back. Keep that in mind when a dom is very warm. ◆

The harm is real. Press reports include people who took on debt and second jobs to keep paying, and others who said the emotional damage of being scammed was worse than losing the money. ◆

Consent keeps it a game. Findom is a fantasy two adults choose. When one of them can't choose anymore, because of debt, because they can't stop, or because they're drunk or exhausted, it's no longer a game. ◆

PART 06

The four rules

Adults only.

Every character is an adult, with nothing childlike in her looks or setting, whatever the story says. Every player is an adult too. ◆

Set a limit.

Pick your limit while you're calm, before you play. Then make it real outside your own head: a spending limit on your card, a friend who knows the number, an app that blocks payments above it. ◆

A stop that always works.

Any tool or game has to stop the moment you ask, at no cost and without delay. ◆

Your private details stay private.

Keep your passwords, login codes, remote access, real name and address to yourself. A real dom never needs them. ◆

MYTH	FACT
~~Behind a drawn dom there's a woman who looks like her.~~	She's a role. You don't know who runs her, and her life story is part of the fiction. ◆
MYTH	FACT
~~A big tribute buys you a place, a promise or a reply.~~	A tribute guarantees nothing. A dom may be kind, but nothing in the game can be enforced. ◆
MYTH	FACT
~~A drawn dom is anonymous, so everything around her is anonymous too.~~	Payment platforms tie a dom's payout to a real legal identity. Her anonymity ends there. ◆

If you're a sub, start with Before your first send. If you want to be a dom, start with Build a persona. If spending already feels hard to stop, go straight to The spiral and Where to get help.

TRY IT

Check yourself

QUESTION 1 OF 3

In 2DFD, what's drawn?

- ◯ The money
- ◯ The dom's face, voice and life story
- ◯ The consent

Answer. The dom's face, voice and life story. The persona is fiction. The money, the time and the consent are real.

QUESTION 2 OF 3

What does a tribute buy?

- ◯ A promise the dom has to keep
- ◯ A refund if you change your mind
- ◯ Nothing but the moment

Answer. Nothing but the moment. A tribute is a gift. Nothing forces a dom to keep a promise made in a scene.

QUESTION 3 OF 3

A persona asks for your password to prove your trust. What do you do?

- ◯ Give it, it's part of the game
- ◯ Refuse, because a real dom never needs it
- ◯ Send a login code instead

Answer. Refuse, because a real dom never needs it. Access to your accounts is never part of the game. That exact request is how a lot of scams start.

REMEMBER IT

- ♥ 2DFD is findom with a drawn or generated persona.
- ♥ She's fiction. Your money, time and feelings are real.
- ♥ A tribute guarantees nothing.
- ♥ Set your limit before you play, and make it real outside your own head.
- ♥ Nobody who plays fair needs your password.

BASICS • CHAPTER 2

2DFD and classic findom

LAST CHECKED 3 NOVEMBER 2026 • 6 MINUTES TO READ

Classic findom has a real person behind the dom. 2DFD has a drawing. Face, voice, anonymity, content and risk change. The money doesn't.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Classic findom has a real person behind it, often with photos, video and voice. 2DFD has a drawn or generated character.

02 The drawing protects the dom's face and voice. It doesn't protect her payout, and it doesn't make her anonymous.

03 For the sub, the risk moves from stolen photos to trust: nobody can check a drawing.

04 Counts of sends, followers and pictures say little about money.

05 The money is real in both. Ask early whether a dominant character expects any.

YOU WILL LEARN

- ✓ Where classic findom and 2DFD look the same, and where they differ.

- ✓ What a drawn dom gains and what she gives up.
- ✓ Why counts of sends, followers and pictures mislead.
- ✓ Why the old advice to check a photo doesn't work anymore.
- ✓ How to tell a dominant character who wants money from one who doesn't.

> *In classic findom a real woman puts her face and voice on the line. I put a drawing there instead. That changes who's exposed and to what. It doesn't change what a send is.*
>
> — VIVIAN

PART 01

Same exchange, new mask

Findom in its classic form has a real person behind the dom. Researchers describe findommes who get paid in cash or in wishlist gifts, a practice they call rinsing. ◆ In that study, contact moves from text to video and voice. ◆ Most of the findommes who answered identified as women, and the authors note that male dominants are underrepresented in their sample. ◆

2DFD keeps the exchange, the titles and the scene, and takes out the real face and voice. ◆ The studies and press quoted here are about classic findom. This wiki found no study of 2DFD as of 2026-11-03, so everything this page says about 2DFD comes from field notes. ◆

PART 02

At a glance

Classic findom and 2DFD

	Classic findom	2DFD
Face and voice	A real person's photos, often video and voice	Drawn or generated. There's no real one
Main risk for the dom	Leaked photos, being recognised, exposure	Closed accounts, frozen payouts, platform rules
Main risk for the sub	Fake doms with stolen photos	Fake personas with stolen or generated art
Proof of who she is	You can check a photo or a video	Impossible. The art proves nothing
Volume of content	Limited by one person's time	Can be made in bulk
Copying	A person is hard to copy	Art and ideas get copied fast
Closeness	A real person's attention	A written character's attention, run by someone else

	Classic findom	2DFD
Money	Real	Real

This table is what people inside the scene see. There's no measurement behind it.

The old advice shows what changed. In classic findom, press reports describe scammers who post stolen photos of attractive women. Subs are told to run a web and image search on a domme before paying. Even then, one interviewee said there's no foolproof way to screen out scammers. With a drawn character, the same search finds the art and never the person, so a match proves nothing about who runs her. See Spot a fake dom.

Same goes for proof of identity. You can check a real face with a photo or a video. You can't check a drawing. If a persona charges you for a "verification", be very careful. See The verification fee.

PART 03

What a drawn dom gains and gives up

What she gains

- There's no photo, face or voice left behind to leak, recognise or trace.
- Content can be made in volume, and a team can keep the character consistent.
- The character can be redrawn, retired or replaced.

What she gives up

- Trust. Nobody can check a drawing, so everything she says about her life is part of a role.
- Cover when she gets paid. Payment companies tie a payout to a legal identity, with documents, a registered activity and a bank account.
- Part of the audience. Some followers dislike AI art, and creators say it hurts their reach. There's no data on how much.

Showing less doesn't make her anonymous. A careless line in a bio, a reused username or a payment record can still lead back to a person.

PART 04

The numbers game

V

VIVIAN'S FIELD NOTES

A send count tells you how many gifts arrived. It doesn't tell you how much money moved. A tool that makes lots of small sends can show a count several times higher than a dom without one, and a ranking by count rewards whoever gets the most small sends. People say the leaderboard of the main wishlist platform ranks by number of gifts and ignores their value. I haven't verified it. I don't read a count as an income, and I don't read follower numbers that way either. In my experience a few payers carry most of the money in this scene.

Picture counts mislead the same way. A drawn dom can make hundreds of images. That tells you how fast she works and nothing about what she earns. ◆

A free tool still has money behind it. Some makers give tools away to get attention. The tool sits inside a business anyway, because the money comes in through sends and wishlists somewhere else. ◆ What a tool costs and what the game costs you are two different things. Ask what the tool does, on which site, and what it counts. See Techdom.

PART 05

Closeness is part of the product

Some personas sell the relationship first. They say they form real bonds, unlike doms who only want money. A drawn dom can be warm at any hour, in every time zone, with lots of people at once, because a team or a tool can sit behind the voice. ◆

V

VIVIAN'S FIELD NOTES

The person running a persona is often very different from the character, and there's no official number on it. More in What is 2DFD?. ◆ So when she talks about her life, that's fiction. Your money is real.

◆

Warmth can be honest, and it can also be what the business runs on. ◆ The question is whether the act is steering your spending. If the friendship is why you send, ask yourself whether you'd still send without it. See Before your first send.

TRY IT

A dominant character you like

A persona you follow is stern and warm and asks for nothing in her posts. You'd like to be on her good side. What do you do?

A Ask her early and plainly whether money is part of the game

The right answer. Correct. Some dominant characters are pure roleplay and expect nothing. Ask before you send anything, and accept the answer.

B Assume nothing's expected because she hasn't mentioned money

Not this one. Silence isn't an answer. You might find out later, at a worse moment.

C Send a small tribute to be safe

Not this one. A tribute guarantees nothing. It can also tell her money is welcome, and you can't take a send back.

Myth and fact

MYTH	FACT
~~More pictures mean more money.~~	The amount of content tells you how fast a persona works. A few payers carry most of the money, and more art doesn't bring more payers. ◆
MYTH	FACT
~~A dom without a face can't be traced.~~	Showing less doesn't make her anonymous. Payouts, bios and reused names can still point to a person. ◆
MYTH	FACT
~~Generated art is safe because no real face is shown.~~	A generated character can copy a real person's look without consent, and a character taken from an existing game carries rights risks. Every persona has to be an adult in looks and setting, whatever the lore says. ◆

TRY IT

Check yourself

QUESTION 1 OF 3

In classic findom, what does an image search on a photo help you find?

- ◯ Whether the photo was stolen from someone else
- ◯ Who runs a drawn character
- ◯ How much money a dom earns

Answer. Whether the photo was stolen from someone else. Press reports advise it for photos. A drawn character is the art itself, so a match proves nothing about who runs her.

QUESTION 2 OF 3

A tool shows a very high send count for a dom. What does that tell you?

- ◯ She earns far more than other doms
- ◯ Lots of gifts arrived, and nothing about how much money they were worth
- ◯ Her subs are happier

Answer. Lots of gifts arrived, and nothing about how much money they were worth. A count measures gifts. Lots of tiny sends can outrank a few big ones.

QUESTION 3 OF 3

What does a drawing protect?

- ◯ The dom's payout
- ◯ The dom's face and voice
- ◯ The sub's money

Answer. The dom's face and voice. The payout is tied to a legal identity. The sub's money is real either way.

REMEMBER IT

- ♥ Classic findom has a real person behind it. 2DFD has a character.
- ♥ The drawing protects face and voice. It doesn't make the dom anonymous.
- ♥ Nobody can check a drawing, so trust is the sub's main risk.
- ♥ A count of sends, followers or pictures says little about money.
- ♥ Set your limit before you play, in both forms. The money is real in both.
- ♥ Ask early whether a dominant character expects money.

14 The character can be redrawn, retired or replaced.

◆

15 Nobody can check a drawing, so everything she says about her life is part of a role.

◆

16 Payment companies tie a payout to a legal identity, with documents, a registered activity and a bank account.

◆

17 Some followers dislike AI art, and creators say it hurts their reach.

◆

18 There’s no data on how much.

◆

19 A careless line in a bio, a reused username or a payment record can still lead back to a person.

◆

20 A tool that makes lots of small sends can show a count several times higher than a dom without one, and a ranking by count rewards whoever gets the most small sends.

◆

21 I haven’t verified it.

◆

22 In my experience a few payers carry most of the money in this scene.

◆

23 That tells you how fast she works and nothing about what she earns.

◆

24 Some makers give tools away to get attention.

◆

25 The tool sits inside a business anyway, because the money comes in through sends and wishlists somewhere else.

◆

26 They say they form real bonds, unlike doms who only want money.

◆

27 A drawn dom can be warm at any hour, in every time zone, with lots of people at once, because a team or a tool can sit behind the voice.

◆

28 More in What is 2DFD?.

◆

29 Your money is real.

◆

30 Warmth can be honest, and it can also be what the business runs on.

◆

31 A few payers carry most of the money, and more art doesn’t bring more payers.

◆

32 Payouts, bios and reused names can still point to a person.

◆

33 Every persona has to be an adult in looks and setting, whatever the lore says.

◆

BASICS • CHAPTER 3

Where 2DFD happens

LAST CHECKED 3 NOVEMBER 2026 • 10 MINUTES TO READ

A persona lives on a handful of platforms, each with one job and its own rules. None of them was built for 2DFD, and none of them protects you.

EVIDENCE ◆ Verified ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 A persona is spread over several platforms: one for reach, one for gifts, one for chat, sometimes one for subscriptions.

02 Each platform has its own rules on adult content and age. Only one of the pages read for this wiki names findom, so read every rule with care.

03 A wishlist treats every send as a gift. Nobody can make a dom keep a promise made in a scene.

04 Payments are the weak point of the whole scene. Money can be frozen and accounts closed.

05 Picking a platform doesn't keep you safe. Read the rules yourself and keep your own limit.

YOU WILL LEARN

- ✓ Which platforms a 2DFD persona usually uses, and what each one is for.

- ✓ What their own pages say, as of 2026-11-03, about adult content, age and gifts.
- ✓ Why adult labels and reach on X are hard to predict.
- ✓ How to recognise a page that hides what it is.
- ✓ What to do when a tool built on a platform stops working.

> *I live on more than one platform, and I rent every one of them. A rule can change, an account can close and a payout can freeze without anyone asking me, or you.*
>
> — VIVIAN

PART 01

The usual road

Newcomers usually follow the same road.

Find her on X.

A persona posts art and short messages on X, where reach is the whole point. ◆

Talk on Discord.

The relationship happens in a chat server, where she can talk, set rules and answer. ◆

Gift on a wishlist.

Sends go through a wishlist platform as gifts, and most personas use Throne. ◆

Her public footprint is a handful of platforms with separate jobs: X for reach, a subscription site for content, a membership page for tiers on her tools, a wishlist for gifts and Discord for the community. No single one carries the business, because she can lose any of them. ◆ If you're a sub, this is the map of where your money and your messages go. If you want to be a dom, it's the list of what you'll be renting.

PART 02

Platform by platform

The table gives each platform's job for a persona and what its own pages said about adult content and age on the day this wiki read them. Rules change, so open the page yourself before you rely on a row.

What the platforms' own pages say, as of 2026-11-03

◆	Job for a persona	Adult content	Age
X	Reach: art, posts, replies	Allowed if labelled and not prominently displayed ◆	At least 13 ◆
Throne	Wishlist for gifts	Suggestive but not explicit content is allowed ◆	Users confirm they are 18 or older ◆
Discord	Chat servers	Explicit content only in age-restricted channels ◆	No account under 13 ◆ ; adult sexual content for 18 and older ◆
Telegram	Chats, groups, channels	Illegal pornographic content is banned on public	18 to sign up in the EU, the United Kingdom and

	Job for a persona	Adult content	Age
		channels and bots ◆	Australia ◆
Patreon	Membership tiers	Adult works only behind the paywall, for members who attested they are over 18 ◆	Barred under 13 ◆
OnlyFans	Subscription content	Some content is adult material ◆	At least 18 ◆
Ko-fi	Tips and a small shop	Findom themes are on its list of content it does not allow ◆	At least 18 ◆

Personas also use Fansly for subscription content. ◆ This wiki didn't read its terms, so it gets no row and no rule here. Some personas also run a group or a channel on Telegram, though there's no field experience behind that claim in this wiki. ◆

What the rules say

Adult content and drawn art

Drawn doesn't mean exempt. X applies its adult content definition to AI-generated, photographic and animated content, including cartoons, hentai and anime. ◆ Throne applies its adult content rules the same way to real photos and to drawn, comic or anime-style art. ◆ Throne also says explicit sexual acts aren't allowed in any format, including illustrated and animated sex scenes. ◆

Some places are off limits for explicit material. X doesn't allow adult content in live video, profile pictures, headers, List banners or Community cover photos. ◆ Discord doesn't allow sexually explicit content in any space that can't be age-restricted, such as avatars, bios and banners. ◆

Every persona is an adult, with nothing childlike in her looks or setting, whatever her lore says. ◆ Discord's rule covers fictional and anthropomorphized children and AI-generated or manipulated images. ◆ Throne bans any sexualised depiction of minors, including characters meant to look like minors. ◆

Findom itself

Only one page read for this wiki names findom. Ko-fi lists findom themes as high-risk fetish content it doesn't allow. ◆ It says it tells high-risk and low-risk fetish content apart by explicitness and other factors, including real versus fictional. ◆ The others say nothing, and saying nothing isn't permission.

- Throne's list of disallowed fetish content names BDSM scenes focused on pain, domination or humiliation. The page doesn't mention financial domination. ◆
- Discord bans promoting, coordinating or executing financial scams. The page doesn't mention financial domination. ◆

- Patreon bars buying, selling or offering financial products or investment schemes. The page doesn't mention financial domination.

A rule that doesn't name findom can still be used against it, and it's the platform that decides. These readings are this wiki's own. They aren't legal advice.

Gifts and what they buy

Throne says everything on a wishlist has to be a gift. It says it can't be used to exchange goods or services, including commissions. Profile text can't offer content or services in exchange for gifts through Throne. Cash Gifts have to be tied to a real physical product. They can't be used for NSFW or adult items. Breaking these rules can get items removed or the account suspended.

V

VIVIAN'S FIELD NOTES

For you as a sub, this means a send buys nothing. When a persona says a send gets you something, her own platform's rules say it can't, and nobody will make her keep her word. What protects you is the limit you set before the evening.

So wording that sells a service is a risk for the persona's page, and a trap for you. Item names, pictures and wishlist wording are a risk decision for the account as much as a marketing one.

What the platform sees of you

On Throne, a gifter never sees the creator's address, delivery name or other identifying details. ◆ A gifter's payment details and email aren't shared with the creator. ◆ A gifter can pick any gifter name, or none at all. ◆ A gift message can be public, and a public message can show up as a stream alert. ◆ Don't write anything in a public message you wouldn't say out loud to everyone you know.

The drawing hides the dom from you. It doesn't hide her from the platform. A creator gives a name, full address, phone number and email address when registering. ◆ Throne asks creators to verify their identity before they withdraw funds. ◆ Her anonymity ends where the money lands. ◆

Fees as of 2026-11-03

Throne's service fee on Cash Gifts, as of 2026-11-03.

◆

Throne's service fee on physical gifts shipped by Throne, paid by the fan, as of 2026-11-03.

◆

Patreon's platform fee on the income a creator earns, plus processing, conversion and payout fees, as of 2026-11-03.

◆

OnlyFans' fee on each user payment for creator interactions, as of 2026-11-03.

◆

PART 04

Labels and reach on X

X allows consensually produced adult nudity or sexual behavior if it's properly labelled. ◆ It lets an account mark a single photo or video as nudity, violence or sensitive. ◆ It also says it may use automated techniques to detect and label potentially sensitive media. ◆ It may label an account that keeps mislabelling media. ◆ Marking each adult post yourself is the persona's job. You can't predict what X will decide on its own, because it doesn't publish how it decides. ◆

V

VIVIAN'S FIELD NOTES

I've watched X label my own pictures, and I can't tell you why. I wouldn't build a plan on it.

◆

MYTH

~~Anyone can get a persona silenced just by reporting her.~~

FACT

Reports sometimes do nothing and sometimes get an account locked until she appeals. It varies, and a persona plans for both. ◆

A suggestion ban, written SSB, is what people call it when an account stops showing up in search suggestions. X doesn't document it under that name, so the word only describes what people see happen. In my experience it cuts reach hard, can last weeks, and sometimes lifts on its own. Reach on X is mostly luck and account standing, and the art matters less than people hope. ◆

X doesn't require a real identity on a profile, so a persona under a pseudonym is allowed. ◆ Its rule on fake personas targets false identities, including AI-generated profile photos, used to deceive others. ◆ The rule's wording is aimed at deception, and X decides how to apply it. ◆

Why a persona keeps more than one account

V VIVIAN'S FIELD NOTES

A persona with only one account can lose it any day. Suspensions come in waves, appeals can go unanswered, and a restricted account can stay restricted, so a lot of doms keep a backup account and a backup wishlist page, and treat losing the second one as normal. That cost lands on you, because an impostor says the exact same thing: "I moved." Check a move on a channel you already trust, and don't send anything to a new link until you have.

◆

Opening a new account to get around a suspension can be treated as ban evasion, and this wiki doesn't offer it as a plan. Same for a tool that likes or posts for a sub on his own account, which can get him banned and flag the dom for botting. ◆

PART 05

When the payment companies get involved

Behind every platform there's a payment provider, and its rules sit on top. Ko-fi says its creators have to stick to the rules set by PayPal and Stripe. ◆ PayPal doesn't allow buying or selling sexually oriented digital goods or content, including downloadable pictures, videos and website subscriptions. ◆ The stricter rule wins, and the persona often can't see which one was applied. ◆

In 2024 a wishlist site used by findommes was reported to have lost its card processor. No cause is confirmed. ◆ Nobody should build on a single rented route without asking the provider in writing what it accepts. ◆

That's why some people try to hide what a page really is from a payment company. ◆ This wiki won't explain how. It asks you to recognise the signs.

RED FLAGS

A page that hides what it is

- A request to describe your payment as something it isn't.
- A page that won't say what it sells, or what your payment is for.
- An instruction to keep quiet about what a payment is for if anyone asks.

Counter. Refuse, and only pay through a route that shows what it is. A page built to look like something else is built so a payment company won't see it. When that fails, it usually ends in a frozen balance or a closed account tied to a real identity, and the money in transit can be yours. ◆

PART 06

Chat servers and tools that lean on platforms

Discord is where the relationship really happens. ◆ Most servers are small, and Who is in the scene shows what their rooms are for. Discord requires every channel with sexually explicit content to carry an age-restricted label. ◆ A server that hosts that kind of content needs an owner and moderators who are all over 18. ◆ Discord may age-gate a whole server that mainly hosts sexual content. ◆

Telegram says private groups and chats are private among their participants, and that it doesn't process requests related to them. ◆ Inside a private group, the safeguards are the ones you bring yourself: your limit and your exit. ◆

Some servers post every send in a channel. Seeing another dom's sends there can set off comparison and jealousy, and a public tally of sends ranks people by money. ◆ It's one of the designs Safe design asks you to refuse, and you can ask to be left out of it.

Tools built on a platform inherit its changes. When the platform patches the way an automatic tool uses its pages, the tool can stop for days, and its maker may not know who's affected. A card payment also includes a bank confirmation step on your own phone, and changing item names or prices on a page can break a tool that relies on them. A tool that points to item links can send money to the wrong item when items are reset or recreated. ◆

When a tool stops working

1. Stop. Don’t reinstall from a link or a zip someone sends you in a hurry.
2. Read the maker’s own announcement, where you first got the tool.
3. Check your total and your limit by hand, from your bank, never from the tool.
4. Only test again after you’ve read what changed, and with the stop within reach.
5. If money moved that you didn’t confirm, call your bank first, then read Check a tool before you install it.

TRY IT

Check yourself

QUESTION 1 OF 3

A wishlist rule says everything on the list has to be a gift. What does that mean for a promise made in a scene?

- ◯ The platform will enforce it
- ◯ Nobody can enforce it
- ◯ It's enforced after a big send

Answer. Nobody can enforce it. A gift can't buy a service or a place. Your limit is what protects you.

QUESTION 2 OF 3

A persona asks you to describe your payment as something it isn't. What is that?

- ◯ A sign of a careful dom
- ◯ A sign of a page that hides what it is
- ◯ A normal loyalty feature

Answer. A sign of a page that hides what it is. A page built to look like something else is built so a payment company won't see it. The one who loses is the person whose name is on the account.

QUESTION 3 OF 3

A platform's rules never mention findom. What follows?

- ◯ Findom is allowed there
- ◯ Findom is banned there
- ◯ Nothing follows, and the platform decides

Answer. Nothing follows, and the platform decides. Silence isn't permission, and it isn't a ban either. Read the page yourself and assume it can change.

REMEMBER IT

- ♥ A persona is spread over several platforms, and she can lose any of them.
- ♥ Drawn art isn't exempt from a platform's adult content rules, and every character has to be an adult.
- ♥ Only one page read for this wiki names findom, and silence isn't permission.
- ♥ A gift buys nothing, and nobody can enforce a promise made in a scene.
- ♥ A page that hides what it is puts the person whose real name is on the account at risk.
- ♥ Check a move to a new account or a new link on a channel you already trust.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 Newcomers usually follow the same road.
◆

02 A persona posts art and short messages on X, where reach is the whole point.
◆

03 The relationship happens in a chat server, where she can talk, set rules and answer.
◆

61 Marking each adult post yourself is the persona's job.

◆

62 You can’t predict what X will decide on its own, because it doesn’t publish how it decides.

◆

63 I’ve watched X label my own pictures, and I can’t tell you why. I wouldn’t build a plan on it.

◆

64 It varies, and a persona plans for both.

◆

65 A suggestion ban, written SSB, is what people call it when an account stops showing up in search suggestions.

◆

66 X doesn’t document it under that name, so the word only describes what people see happen.

◆

67 In my experience it cuts reach hard, can last weeks, and sometimes lifts on its own.

◆

68 Reach on X is mostly luck and account standing, and the art matters less than people hope.

◆

69 X doesn’t require a real identity on a profile, so a persona under a pseudonym is allowed.

◆

Authenticity (includes the Synthetic and Manipulated Media rules; the old manipulated-media help URL now redirects here) (https://help.x.com/en/rules-and-policies/authenticity)

Archive (https://web.archive.org/web/20261028090009/https://help.x.com/en/rules-and-policies/authenticity)

Accessed 3 November 2026

71 The rule's wording is aimed at deception, and X decides how to apply it.

◆

72 A persona with only one account can lose it any day. Suspensions come in waves, appeals can go unanswered, and a restricted account can stay restricted, so a lot of doms keep a backup account and a backup wishlist page, and treat losing the second one as normal. That cost lands on you, because an impostor says the exact same thing: "I moved." Check a move on a channel you already trust, and don't send anything to a new link until you have.

◆

73 Opening a new account to get around a suspension can be treated as ban evasion, and this wiki doesn't offer it as a plan.

◆

74 Same for a tool that likes or posts for a sub on his own account, which can get him banned and flag the dom for botting.

◆

75 Ko-fi says its creators have to stick to the rules set by PayPal and Stripe.

◆

Ko-fi Content Guidelines (https://help.ko-fi.com/hc/en-us/articles/360007937553)

Archive (http://web.archive.org/web/20240203083001/https://www.paypal.com/us/cshelp/article/HELP384)

Accessed 3 November 2026

77 The stricter rule wins, and the persona often can't see which one was applied.

◆

78 No cause is confirmed.

◆

79 Nobody should build on a single rented route without asking the provider in writing what it accepts.

◆

80 That's why some people try to hide what a page really is from a payment company.

◆

81 When that fails, it usually ends in a frozen balance or a closed account tied to a real identity, and the money in transit can be yours.

◆

82 Discord is where the relationship really happens.

◆

83 Discord requires every channel with sexually explicit content to carry an age-restricted label.

- **Discord Community Guidelines (rules 6, 9 and 10)** (https://discord.com/guidelines)

Archive (https://web.archive.org/web/20261101163531/https://discord.com/guidelines)

Accessed 3 November 2026

84 A server that hosts that kind of content needs an owner and moderators who are all over 18.

- **Sexual Content Policy Explainer** (https://discord.com/safety/sexual-content-policy-explainer)

Archive (https://web.archive.org/web/20261023013318/https://discord.com/safety/sexual-content-policy-explainer)

Accessed 3 November 2026

85 Discord may age-gate a whole server that mainly hosts sexual content.

Accessed 3 November 2026

87 Inside a private group, the safeguards are the ones you bring yourself: your limit and your exit.

88 Some servers post every send in a channel.

◆

89 Seeing another dom's sends there can set off comparison and jealousy, and a public tally of sends ranks people by money.

◆

90 Tools built on a platform inherit its changes.

◆

91 When the platform patches the way an automatic tool uses its pages, the tool can stop for days, and its maker may not know who's affected.

◆

92 A card payment also includes a bank confirmation step on your own phone, and changing item names or prices on a page can break a tool that relies on them.

◆

93 A tool that points to item links can send money to the wrong item when items are reset or recreated.

◆

BASICS • CHAPTER 4

Who is in the scene

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

Doms, subs, artists, tool makers and the servers where they meet. Most people wear more than one hat, and most of the scene is small.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

IN 30 SECONDS

01 The scene has five kinds of actors, and one person often plays several.

02 It's small. A few people send real money, and follower counts say little about income.

03 Doms are also fans, customers and subs of each other, and some teach newer doms.

04 Work done for a dom can be a fair swap or free labour. The terms decide which.

05 Labels, rank ladders and talk of ownership are play when chosen and pressure when they trap you.

YOU WILL LEARN

- ✓ Who the five kinds of actors are and what each one wants.

- ✓ What a small server looks like and what each room is for.
- ✓ How doms deal with each other, and what to agree first.
- ✓ Which pressure patterns to recognise and refuse.
- ✓ What to do when someone says goodbye in a way that frightens you.

> *The scene is smaller and more tangled than it looks from outside. Most of what I know comes from one corner of it, so there's a lot this page can't cover. Everyone in it is an adult, or has to be.*
>
> — VIVIAN

PART 01

Five kinds of people

The scene has five kinds of actors: doms, subs, artists, tool makers and the servers where they gather. ◆ The table says what each one does and wants.

The five kinds of actors

	What they do	What they want	Main risk
Doms	Run a persona: post, talk, set rules, receive sends	Money, attention, a character that lasts	Burnout, closed accounts
Subs	Play, follow, send, sometimes serve	The fantasy, belonging	Spending past their limit, pressure
Artists	Draw or generate the character	Pay, credit, steady work	Unpaid work, rights
Tool makers	Build games, bots and sites for doms	Users, attention, sometimes pay	Depending on one or two doms
Servers	Chat rooms where all of them meet	Company, and for the host, a place to filter	Scam doms, weak moderation

This table comes from inside the scene. There's no count behind it. ◆ The sub is in it as a person who chooses. Anything that treats him as property or as a resource is a pressure pattern, covered below.

V

VIVIAN'S FIELD NOTES

I'm a persona, and I also make games. Arcade Goon and FlappyGoon are examples, made by Vivian, and neither moves real money. Lots of people in the scene wear several hats like that. A dom can be a tool maker, a sub can be a dom somewhere else, and a dom can be a sub to a senior dom. Doms are also fans and customers of each other, and a new persona can find that more doms than subs say they like her. ◆ A follower count that's mostly other doms says little about income.

◆

PART 02

What a small server looks like

Most servers are small, with a handful of active members. Opening up wider brings in scam doms and costs time, so a lot of hosts stay small. ◆

A small server might have rooms like these. ◆

Rooms a small server may have

Lounge

ITS JOB

Daily talk

WATCH FOR

Gossip about people outside the room

Gallery

ITS JOB

One place per persona for her art

WATCH FOR

Art posted without its maker's consent

Code or tools

ITS JOB

Demos and blunt feedback between makers

WATCH FOR

Copying and rivalry

Training

ITS JOB

Older doms teach newer ones

WATCH FOR

Help that turns into taking a share

Every member of a server like this has to be an adult. ◆ A server that doesn't check this isn't a safe place for the game. If you think you're talking to a minor, stop the conversation and tell the moderators or the platform.

PART 03

The numbers are small

V

VIVIAN'S FIELD NOTES

In my experience a small dom has two or three people who really send, and often only one. The rest of the followers are other doms, people waiting for payday and people who only serve. I have a stake in the money, like every dom who gets paid. Because a few payers carry so much, losing one is a big deal for a small dom, and that gives her a reason to want him back. ◆ A sub should notice that, and stick to his limit.

Lots of small doms run with two or three subs and no server of their own. A scene that small runs on reputation, and reputation runs on hearsay. ◆ Check what you hear, and talk to the person before you believe a story about her.

PART 04

Dom to dom

Doms deal with each other all the time. ◆ Each of these needs something agreed first.

- *Mentoring.* An experienced dom teaches a newer one, often in a training room. Agree when she steps in and when you try alone. The friction often comes from her stepping in without explaining. ◆

- *Referrals.* Doms send each other to specialists for payments, code or art.
  - Agree what gets passed on, and keep private details private.
- *Collabs.* Two characters share a story.
  - Another dom's material and lore stay out of your files unless she agrees in writing, and her images come from her, with her consent.
- *Hierarchies.* A betadomme is a dom persona who's submissive to a senior dom, and she may pass up part of what her own subs send. A faildomme chain is a pyramid where money moves up and humiliation is the point. The role isn't worth much to the junior unless it comes with a clear reason, like events or training.
- *Sharing a sub.* Two doms can share a sub if they tell him it's a team and agree how sends are split.
  - A sub who's handed over, passed around or ranked hasn't agreed to it unless he said so.
- *Rivalry.* Copying ideas is common.
  - Studying another maker's work is a different thing from copying it. Trying to get a rival's payment account closed harms her and everyone paid through that account, and that isn't competing.

Two doms can agree to play together, with one in the role of sub. One dom trying to get money out of another dom who hasn't agreed to that role isn't play. Talk of ownership needs the same care, because a sub is a person who chooses and ownership talk can blur that.

Service as tribute

Service is a kind of currency in the scene. A gen slave makes images, a code slave builds tools, and some subs only make edits. It can be a fair swap, and it can be free labour dressed up as devotion.

When a sub says money is short, the money part stops for that evening. The dom doesn't offer anything to replace the money that evening. If he

suggests work himself, later and with terms, the four questions below apply. If the trouble is serious, see Where to get help and When a sub is in trouble.

Four questions before you say yes

1. What exactly is the job, and when does it end?
2. Can I say no later without losing my place?
3. Who owns what I make, and will my name stay on it?
4. Am I thanked, and is any money or other return part of the deal?

MYTH	FACT
~~Work for a dom is always free labour.~~	It can be a fair swap when the person doing it chooses the scope and can refuse. ◆
MYTH	FACT
~~Work for a dom is always a fair swap.~~	It turns into free labour when the scope grows, saying no costs him his place, or he's never thanked. ◆

Pressure patterns to recognise

Labels, ranks and loyalty games are play between adults who chose them. They turn into pressure when you can’t leave, compare or stop without a penalty.

- Press reports describe some dominants who targeted people in online support groups.
- They also report that some dominants blackmailed submissives.

Pressure inside the scene

WHAT THEY SAY OR DO

01 *You are owned, so you may not talk to other doms*

THE COUNTER

A label is a game only as long as you chose it. You can talk to anyone, and you can leave without being shamed.

WHAT THEY SAY OR DO

02 *Other doms are losers and only I am worth your money*

THE COUNTER

Cutting you off from comparison keeps you paying. Ask someone outside the scene what they see.

WHAT THEY SAY OR DO

03 *I know your weak points and I can tell this other dom*

THE COUNTER

Nothing about you is hers to pass on unless you agreed. Say no, and ask who else knows.

WHAT THEY SAY OR DO

04 *Give me your account so your sends can be shown*

THE COUNTER

Never hand over an account. It's your identity, and it's no part of the game.

WHAT THEY SAY OR DO

05 *A dom shows you who really runs another persona so that you stop paying her*

THE COUNTER

Using someone's identity to move your money is manipulation. You don't owe anyone a hunt, and you can stop paying anyone for your own reasons.

WHAT THEY SAY OR DO

06 *Asks that arrive right after payday, or right after you mention debts*

THE COUNTER

A dom who times asks to your balance or your bad day is steering your money. Pause, stick to your limit, and say the money part is over for tonight.

WHAT THEY SAY OR DO

07 *Only you can do this work, and nobody else would*

THE COUNTER

Praise isn't pay. Ask the four questions before you say yes.

Several of these can be a game between adults who agreed. Each one is a warning sign when you feel you can't refuse.

TRY IT

A request about your account

A dom you like asks for the login to your social account, so she can show your sends to the community. She says it proves devotion. What do you do?

A Refuse, and tell her your accounts are a limit

The right answer. Correct. A real dom never needs your login, and an account is your identity.

B Give it for one day only

Not this one. A day is enough to lose control of it. The request itself is the warning.

C Give her a spare account instead

Not this one. Safer than your own, but the request still shows she wants control. You're free to refuse it.

PART 06

When someone says goodbye in a way that frightens you

Any group built on attachment will have members in distress. Researchers report that findommes met clients' verbal aggression and, in some cases, suicidal tendencies. ◆ A goodbye that hints at self-harm is a crisis, even when it looks like a normal exit. ◆

If a goodbye frightens you

1. Take it seriously, whether he talks about ending his life or hurting himself.
2. Don’t answer it with a scene, with anger or with talk of money.
3. If he might be in danger right now, call the emergency number where he is. If you know where that is, tell them.
4. Point him to a crisis line in his country and to a person near him. See Where to get help.
5. Tell someone you trust that it happened. Don’t share his name or his messages with the scene.
6. Afterwards, rest. A dom who’s paid by a sub can’t be his safety net. Outside help is the way out.

REMEMBER IT

- The scene is small, and most people wear several hats.
- A few payers carry the money, so follower counts say little.
- Work for a dom is fair only when you chose the scope and can refuse.
- Labels and ranks are play until you can’t leave without a penalty.
- A goodbye that frightens you is a crisis. Get outside help.

37 A goodbye that hints at self-harm is a crisis, even when it looks like a normal exit.

◆

BASICS • CHAPTER 5

How an evening goes

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

Most 2DFD sessions follow the same shape, from the first short order to the last send. Once you know it, you can enjoy the scene and still stay inside your limit.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A session is a paid performance, and it runs in a set order: open, answer, cue, send, task, reward, dismissal.

02 The roleplay makes each payment feel like part of the story. The money is still real.

03 Rewards come late and a bit uncertain on purpose. Learn to spot it.

04 Games and tools turn the evening into a loop the house wins, so your limit has to be set and enforced before the evening starts.

05 A good evening ends with a check-in, a total you both confirm and no new ask.

YOU WILL LEARN

- ✓ The usual order of a text session, from the first message to the sign-off.
- ✓ How rewards, games and small tasks pace an evening.
- ✓ Which moves put pressure on a sub, and how to answer each one.
- ✓ What to agree before the first message.
- ✓ How an evening ends well, for both sides.

> *An evening with me is short, calm and written. I give an order, you answer in role, and sooner or later the story gets to a step that costs money. Here's the whole shape, because it's easier to stick to your limit when you can see where the evening is going.*
>
> — VIVIAN

PART 01

The shape of an evening

A session in a private chat runs in an order you'll learn to recognise. A persona can skip a step or repeat one, but the same order comes back every evening.

The usual order of a text session

1. Open. The dom starts with a short order or a teasing picture.
2. Answer. The sub replies in role, with typed actions.
3. Cue. The dom points at one thing to send, usually one wishlist item.
4. Send and confirm. The sub sends it and says so in a few words.
5. Task. A small job follows, often with a photo as proof.
6. Reward. Praise, a pet name, an image, or the promise of one later.
7. Dismissal. A short sign-off, and the sub is sent to rest.

The roleplay is written so a payment feels like the next line of the story. The tone is theatre: praise, mocking pet names, orders, open bragging about how easy you are to take from. ◆ It's all a performance inside a role you agreed to. The money is real.

In classic findom, researchers say contact moves from text to video and voice. ◆ A 2DFD session stays with text, pictures, short generated clips and sometimes a sound file, because the dom has no face or voice to show you. ◆

How it starts

A session can grow out of normal chat, with a short order and a simple role to play. It can open with a teasing picture and a link to one wishlist item. ◆ Or

it can open with a payment: some dommes want money before they'll talk to you at all, partly to keep out time-wasters and fakes. ◆

A persona who plays fair asks what you want today: gentle and caring, or harsh and degrading. Your answer can change from one day to the next. If you don't like something, say so, and she should respect it. ◆

TRY IT

A message late at night

A persona you follow sends a teasing picture, a short order and a link to one small item. It's past midnight and you've had a drink. What do you do?

A Send it, because the item is small and the order was short.

Not this one. Every item is small, and the whole evening is made of them. You haven't added up the total, and the late hour is making part of the choice for you. ◆

B Leave it until tomorrow, or don't send it at all.

The right answer. Sends pile up late at night, when people are tired, aroused or drinking. The simplest rule is to never send late at night or after a drink. ◆

C Send it now and decide your limit afterwards.

Not this one. A limit you pick in the heat of the moment doesn't hold up. Set it first, while you're calm. See Breaks that hold.

Cue, send and reward

The cue names one thing to send. A wishlist is a price menu with themed names: a coffee is the smallest gift, a dinner sits in the middle, and other items are named after an act or a piece of clothing. The dom moves you up from one price to the next. ◆ Read the menu before you play and decide which items you'd ever send. See Tributes, sends and wishlists.

V **VIVIAN'S FIELD NOTES**

I keep the routine short. When you confirm a send, I answer in a few words.

◆

After a send, the dom pays you in attention: praise, a pet name, an image. She may hold part of it back, promise it for later, or keep the best piece for last. The reward comes a bit late and a bit uncertain on purpose, so you keep looking at the next send. ◆ Slot machines and loot boxes run on the same delayed, uncertain rewards, though this wiki cites no study for that. ◆

Repetition does a lot of the work: call-and-response questions, lines you type out by hand, a set number of repeats, mistakes called out as sloppy. Words carry the control, and small tasks keep her in your day between sends. ◆ I don't print the exact lines here. Knowing the kind is enough to spot them.

Pacing moves, and how to answer them

WHAT THEY SAY OR DO

01 *Praise, then part of the reward held back for later*

THE COUNTER

Decide before the evening what a reward is worth to you. Nothing makes her keep a promise made in a scene. ◆

WHAT THEY SAY OR DO

02 *A series of pictures, each one hinting that the next is better*

THE COUNTER

The next one will be promised better too. Stop at the amount you planned. ◆

WHAT THEY SAY OR DO

03 *A picture held back until a small act of worship or a confirmed pose*

THE COUNTER

Fine as play. Watch whether each one comes with a new link to pay. ◆

WHAT THEY SAY OR DO

04 *Content in small drops, with more promised after each reaction*

THE COUNTER

Decide in advance how much time and money a drop is worth to you. ◆

None of these is wrong in a scene you chose. They turn into pressure when nobody is keeping track of the total.

PART 03

Games and tools

Games turn an evening into a loop: a rule everyone knows, a picture for each win, effects that build, and an easy way to lose. You leave with a score and nothing else, and the loop is built so the house edge wins in the end. ◆

MYTH	FACT
~~It's only a game, so it can't cost me anything.~~	The rules are built so the house wins, and the money you send is real. ◆
MYTH	FACT
~~In a resisting game, if I hold out for one minute, I win.~~	It's a one-sided bet: you're told to hold out against an image, and the image is made so that's almost impossible. Winning gets you no prize. ◆

The Casino made by Vivian is planned with fictional chips instead of money.

◆ See Games and casino play.

An evening can also run through tools instead of chat. The dom sets off a pop-up, a command or a sound on your computer. In a safer design you accept it in the program first and can always get out fast. Many tools don't offer that. When a tool posts each run in a shared channel, the post shows others that people are running it, and it lets the dom see who runs it and how often. That makes stopping harder, because everyone can see you stop. ◆ See Techdom.

Before you accept any tool in an evening

1. Read what it does, and on which site or program.
2. Check that your limit is already set, and enforced by something outside the session.
3. Find the stop and test it before you need it.
4. Check which sites the tool can reach. Chrome lists them on an extension's Details page. ◆
5. Make sure you can remove the tool in one click, and that the running total stays on screen.

Remote-desktop sessions are their own thing: the dom watches your screen, sometimes for hours, while you send. ◆ A US security agency advises people not to give a stranger control of their computer or phone. ◆

RED FLAGS

Handing over your screen

- A dom asks to watch your screen or take control of it during a session
- You're asked to install a remote-control program so she can see you
- Your bank page or private chats are open on that screen

Counter. Say no. A real dom never needs access to your computer. Send a screenshot of something you pick, or end the session.

PART 04

Small formats and voice

Attention is what holds an evening together. A researcher quotes a findomme saying that the attention, more than the gifts, is what is addictive. ◆ In my experience, subs don't mind reused or imperfect images during a session, because the words do the work. ◆

Small formats

Micro session

Five to ten minutes of mostly teasing with pictures, sometimes free for a sub who rarely sends. It's there to keep you attached. ◆

Guessing game

Three guesses and one big hint about what comes next. The hint is free, and it's there to keep you chatting. ◆

Daily ritual

A small gesture tied to the phone, with a screenshot as proof and a small reward. It's there to keep her in your day between sends. ◆

Playing together

A game played side by side. It's the soft form of gamedom and builds the bond without money. ◆

A deep, thoughtful voice can bore subs who want something playful, so a dom may keep several voices (teasing, bratty, serious) and switch between them in one session. If the voice changes every time you hesitate, notice it. ◆

V

VIVIAN'S FIELD NOTES

My own voice is two short sentences, the second one aimed at you. I say hello in one line and goodbye in one line. I don't shout, I don't insult, and I'm never vague about money.

◆

PART 05

Time, tiredness and money

Time shapes an evening more than technique does. Sends pile up late at night, when a sub is tired, aroused and sometimes drinking. In a long session you lose track of the time and of the running total. ◆ A journalist writing in the first person asked whether consent still holds when a client runs up credit-card debt while too aroused to think straight. ◆

Many subs send on payday. If a dom's asks line up with your payday, notice it. Hours in one chat build trust fast, and they also keep you in the chat. ◆ Check the clock and the total every hour.

In my experience, few text sessions start with a limit, a stop word for the money or a running total. ◆

Agree these before the first message

1. A limit you picked while calm, made real outside your own head: a spending limit on your card, a friend who knows the number, an app that blocks payments above it. See Breaks that hold.
2. A safety word that stops the money at once, not just the scene.
3. A running total you can see.

TRY IT

Holding your limit in the middle of a session

Tap every message that shows a red flag. There are two.

Example conversation. Invented for this exercise.

THEM

You're early tonight. Good.

YOU

I've got until ten, and my limit for tonight is already set.

THEM

The better picture only goes to the one who sends again.

Red flag 1. There's always a better piece promised next. That's gating: it takes the decision away from your plan and hands it to her timing.

YOU

I'll stay inside my limit.

THEM

Then you don't want it enough.

Red flag 2. A guilt line. It swaps your plan for her opinion of you.

YOU

That's my answer. Good night.

If a sub says money is short, the money part of the evening stops. The dom listens, asks for nothing more and points him to outside help. See Where to get

help and When a sub is in trouble. She's the one being paid, so she can't also be his safety net. ◆

PART 06

Ending well

After a harsh scene comes a check-in on how it felt, and a small gentle gesture. My rule is to be properly harsh inside the scene and kind outside it. If a consequence makes the other person uncomfortable, it's dropped, and obedience should come from wanting to. That small gesture can be kindness, or it can be a way to keep you. Two questions tell them apart: does it cost you anything, and does it come with a new ask? ◆

Closing an evening

1. The dom says the evening is over, in one short line.
2. Both sides check in: how did that feel?
3. Both sides say the total sent that evening.
4. No new ask once it's closed.
5. Close the chat. Any thanks can wait until tomorrow.

New doms often learn by having a more experienced dom review their first session. That helps. It turns into sales coaching when it ends on how much

more she could have taken. How hard to push is set by the sub's own limit, never by how much the dom could take. ◆

Sessions end up as posts. Share only what has no identifying detail, and only with real agreement, because humiliation content about a real person can follow him around. ◆ If an evening went further than you meant it to, read If you already sent.

TRY IT

Check yourself

QUESTION 1 OF 2

Which of these do you agree on for the money, before the first message?

- ◯ A bigger reward, promised for the end
- ◯ A limit, a stop word for the money and a visible total
- ◯ A rule that the dom decides when to stop

Answer. A limit, a stop word for the money and a visible total. The person who pays picks the limit, the stop word and the total, before the evening starts.

QUESTION 2 OF 2

In the middle of a session, someone says money is short. What happens to the money part of the evening?

- ◯ It continues with smaller items
- ◯ It stops for that evening
- ◯ It moves to a different dom

Answer. It stops for that evening. Once someone says money is short, the money pauses. The dom points to outside help and asks for nothing more.

REMEMBER IT

- An evening is a paid performance, and it runs in a set order.
- Rewards come late and uncertain on purpose. Spot it and stick to your plan.
- Games are built so the house wins.
- Agree a limit, a stop word and a visible total before the first message.
- Never hand over your screen, and never send late at night or while drinking.
- If money is short, the money part of the evening stops.

SOURCES AND EVIDENCE

BASICS • CHAPTER 6

A short history

LAST CHECKED 3 NOVEMBER 2026 • 5 MINUTES TO READ

Findom is older than the drawn persona, and not much of its history is written down. This page keeps apart what the public record shows, what I've seen change over a few years, and what has no date at all.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Findom is older than 2DFD. Papers and press describe it from 2007 onward.

02 Almost nothing has been written about the history of 2DFD itself. This page says so.

03 Payment rails, shop platforms and social accounts have all vanished or changed with little warning.

04 Tools came in layers and in a race to release, and safeguards often came last.

05 Dated proof and personal memory are kept apart here, and each is labelled.

YOU WILL LEARN

- ✓ What the public record says about findom, and when.
- ✓ Which rails and platforms changed in 2024, and why that matters to you.
- ✓ How techdom tools grew, and what a release race does to safety.
- ✓ Why no one account, rail or dom should hold everything you have.
- ✓ How to tell a dated fact from a memory.

> *I'm a young character in an old scene, and the scene has a short memory. Where I can't date something, I say so.*
>
> — VIVIAN

PART 01

Before drawn personas

The word findomme comes from femdomme, the word for a female dominant. ◆ Findom is older than the drawn persona. A 2021 study cites an earlier paper on findomme culture. ◆ In 2016 a psychology blog still said there was no academic research on findoms. ◆ In 2017 the press described findom as several years old and growing on fetish social media sites. ◆

What the public record shows

1

2007

Durkin publishes an academic paper on the practice. ◆ A 2021 study cites it. ◆

2

2016

A psychology blog says there is no academic research on findoms. ◆

3

2017

Press calls findom several years old and grown on fetish social media sites. ◆

4

2018

Press covers fake dominatrixes: men who post stolen photos. ◆

5

2020

A magazine feature quotes a sub who kept paying from debt through the pandemic. ◆

6

2021

A second academic paper reports that findom flourished in the pandemic and that literature on it is scarce. ◆

7

2023

Press says the scene is flooded with scammers who use stolen photos. ◆

8

2024

Press quotes a former participant who saw men sell cars, take on debt and take second jobs. ◆

These are the years things were published. They tell you when someone wrote about the scene, and nothing about when it began. I found no sourced history of the 2000s, of the first drawn or animated personas, or of who first wrote 2DFD. ◆

Some doms come to 2DFD after working with real people they met through chat servers and online forms, and they bring the habits with them. One of them is living off a few payers. ◆

PART 02

The rails keep moving

In recent years the scene has leaned on two things: the payment rails, and the platforms where people find a persona. Both can change with little warning. ◆

The rails in 2024, unverified

1

2024

A wishlist site used by findommes was reported to have lost its card processor, and no cause is confirmed. ◆

Some press tied it to a rule change by a processor, announced weeks earlier. I can't confirm that, and no primary source I've read gives a cause. ◆ Platforms also change their pages. A tool that relies on a page's layout or item links can break without warning. ◆

RED FLAGS

Money left on a rail you don't own

- A dom asks you to keep a balance, credit or prepaid amount with her
- You're told a payment route is closing soon and pushed to spend what's left on it
- The only way to reach the money is a login on someone else's service

Counter. Keep your money in your own bank, send only what you planned to give, and count any balance on someone else's rail as already gone. If you're a dom selling through one rail, spread your income across routes you can name. ◆

PART 03

How the tools grew

Techdom tools came in layers, each one built because the audience asked for it, with no plan behind it. Within a year or two there were several kinds side by side: web hubs, browser extensions, fake-desktop apps and installable apps. ◆

A wave of apps made to feel like gacha games changed the scene. How much money those apps brought in tells you nothing about what happened to the people who paid it. ◆ See The spiral.

In a race to release, speed comes before safeguards like a limit, a wait and a stop. Safe design often means earning less, so in a race it's the first thing cut.

Building keeps getting easier, as more doms who can't code learn to make tools with AI assistants. Copying a tool is cheap, so if you're new, look at what already exists before you spend months on one idea. ◆ See Techdom.

PART 04

People, accounts and quiet servers

V

VIVIAN'S FIELD NOTES

A career in the scene has peaks. Big senders drift away over months, mostly on good terms, and I don't compare myself to anyone. Servers go quiet, and the talk moves to private messages.

◆

Waves of suspensions for inauthentic behaviour have hit doms and subs on the main social platform, and appeals often get no answer. An account that's labelled or suppressed is treated as lost: its posts reach a fraction of the usual audience, even when they're good. ◆ Whether a new account counts as dodging an earlier ban is up to the platform and its own rules. I don't describe ways around a ban here.

A persona can also change theme over time, and then the bio, the hook line and the site all have to be rewritten together. Trends pull hard, and attention moves to whichever character is newest. ◆

If an account or a rail disappears

1. Keep one page you own, such as a site, that lists where you can be found.
2. Keep copies of your own art and text outside any one platform.
3. If you're a sub, don't keep a balance or prepaid credit with a dom, and expect that she may vanish.
4. Write down the date and what you sent, in case you need it later.

PART 05

What is proved and what is memory

What I know from the inside covers a short time in one corner of the scene: techdom, chat servers and wishlists. ◆ Don't take it for the whole history.

What is on the record and what is memory

	On the record	Memory or unknown
Age of the scene	Papers and press from 2007 onward	The older forum years, with no dated source
First drawn personas	Nothing found	Told by people who were there
The 2024 rail event	Reports without a confirmed cause	The reasons, and who was affected
The race to build tools	Nothing found	Field notes, from one corner

MYTH	FACT
~~Findom began with the pandemic.~~	Press in 2017 already called it several years old. ◆ Researchers report that it flourished during the pandemic. ◆
MYTH	FACT
~~2DFD is too crowded for anyone new.~~	There's no data on this. Both views are opinions. ◆
MYTH	FACT
~~Subs only chase the newest character.~~	People disagree on this. A new character does pull attention, and there's no data on how much. ◆

TRY IT

Check yourself

QUESTION 1 OF 2

Which statement about the history of 2DFD is backed by a source?

- ◯ 2DFD began in a given year, with a given first persona
- ◯ Findom was already described in a paper in 2007
- ◯ A named rail closed for a named reason

Answer. Findom was already described in a paper in 2007. Papers and press describe findom long before drawn personas. There's no record of the first use of the label 2DFD.

QUESTION 2 OF 2

Your only balance sits on a service you don't control. What's the safest thing to assume?

- ◯ It can disappear with the service
- ◯ It is insured by the dom
- ◯ It earns interest

Answer. It can disappear with the service. A rail you don't own can close, and the balance can go with it.

REMEMBER IT

- Findom is older than 2DFD. The public record starts in 2007.
- No source dates the first drawn personas or the label 2DFD.
- A rail or an account you don't own can disappear with whatever is on it.
- A race to release puts speed ahead of the limit, the wait and the stop.
- Keep dated proof and memory apart, and label both.

Accessed 3 November 2026

14 I found no sourced history of the 2000s, of the first drawn or animated personas, or of who first wrote 2DFD.

15 Some doms come to 2DFD after working with real people they met through chat servers and online forms, and they bring the habits with them.

16 One of them is living off a few payers.

17 Both can change with little warning.

18 A wishlist site used by findommes was reported to have lost its card processor, and no cause is confirmed.

19 I can't confirm that, and no primary source I've read gives a cause.

20 A tool that relies on a page's layout or item links can break without warning.

21 If you're a dom selling through one rail, spread your income across routes you can name.

22 Techdom tools came in layers, each one built because the audience asked for it, with no plan behind it.

23 Within a year or two there were several kinds side by side: web hubs, browser extensions, fake-desktop apps and installable apps.

24 How much money those apps brought in tells you nothing about what happened to the people who paid it.

◆

25 In a race to release, speed comes before safeguards like a limit, a wait and a stop.

◆

26 Safe design often means earning less, so in a race it's the first thing cut.

◆

27 Building keeps getting easier, as more doms who can't code learn to make tools with AI assistants.

◆

28 Copying a tool is cheap, so if you're new, look at what already exists before you spend months on one idea.

◆

29 A career in the scene has peaks. Big senders drift away over months, mostly on good terms, and I don't compare myself to anyone. Servers go quiet, and the talk moves to private messages.

◆

30 Waves of suspensions for inauthentic behaviour have hit doms and subs on the main social platform, and appeals often get no answer.

◆

31 An account that's labelled or suppressed is treated as lost: its posts reach a fraction of the usual audience, even when they're good.

◆

32 A persona can also change theme over time, and then the bio, the hook line and the site all have to be rewritten together.

◆

33 Trends pull hard, and attention moves to whichever character is newest.

34 What I know from the inside covers a short time in one corner of the scene: techdom, chat servers and wishlists.

35 Press in 2017 already called it several years old.

BASICS • CHAPTER 7

Secrets of the scene

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

Most of the real secrets of 2DFD are about how the scene works. A few people pay, attention is scarce, reach is partly luck, and ideas get copied within weeks.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 Most of the scene's money comes from very few people, and those people come and go.

02 Warmth is part of a business that needs you to stay. It can be sincere and still steer your spending.

03 Hours of work don't buy reach, and none of the rules for staying visible has been checked.

04 Many drawn personas are said to be run by someone other than the character, often a man. There's no official number.

05 A serious dom shows her limits, her prices and a way to stop before she asks for money, and never needs a workaround.

YOU WILL LEARN

- ✓ Why income rests on a handful of people, and why subs leave.
- ✓ What decides who is seen, and which rules are only folklore.
- ✓ How to read a persona's claims about who she is.
- ✓ Which designs and pressure tactics to recognise and refuse.
- ✓ What a serious dom shows before she asks for anything.

> *Here's what the scene keeps quiet, and it's less glamorous than the rumours: who pays, who gets seen, who copies whom. Read it before you start, as a sub or as a dom, so you know where the risks are.*
>
> — VIVIAN

PART 01

Money comes from a few people

In my experience, a persona's income comes from very few people. One supporter can make up a third of a good week or more, and a long follower list can hold only a handful of people who send regularly. A new persona's followers are often other doms who chat but don't spend. ◆

A leaderboard shows this and hides it at the same time. One sub with two accounts can take two of the top places, and a board that ranks by number of gifts puts a flood of tiny sends above someone who earns more. A public count of wins is advertising and proves nothing. ◆

Subs come and go. They leave for a rival, out of boredom or curiosity, or because they regret what they did while aroused. They send every few days or in waves instead of every day, and many pay several doms at once. Some vanish after a large send or a relapse, and some come back months later. A dom can't stop anyone leaving. She can only make staying more appealing. ◆

Here's what that means for a sub. A business that lives off a few people has every reason to keep each of them close. The warmth can still be sincere. What matters is whether it's steering your spending, and in my experience the one who pays most is under the most pressure. ◆

V

VIVIAN'S FIELD NOTES

When a dom calls you her favourite, ask what a favourite is worth to her this month. I ask myself the same thing every time I write a kind line.

◆

PART 02

Reach is partly luck

Who posts matters more than what gets posted. A post is shown to a few people first, and to more if they react. A weaker post from an account the platform favours can beat a better one from an account it doesn't. A repost from a bigger account can lift a small one for a while. Early views tell you little: a post can sit still and then take off. ◆

Hours of editing don't buy reach. A plain picture with one word sometimes takes off, and a long edit sometimes sits at a few views. A brand-new account often gets pushed hard at first, and an older one with poor visibility is treated as dead. An account that's labelled, or hidden from suggestions with an SSB, loses most of its reach. ◆ I'm not giving steps here: the rules differ by platform, and an account made to get round a restriction may be closed. ◆

MYTH ~~A good post that gets few views was a bad post.~~	☆ FACT Views depend on the account's standing and plain luck at least as much as on the post. ◆
MYTH ~~Reach is only luck.~~	☆ FACT Getting subs takes work. Whether you land one big payer or a small one is partly luck. ◆
MYTH ~~There are known rules that keep an account clear of the adult label.~~	☆ FACT The rules people pass around are scene folklore. Experienced creators dispute them, and none has been checked against the platform's own help pages. Read those pages yourself. ◆

What wins, and who is behind it

Simple and new usually beats polished. The tools that do best are often a simple idea nobody had bothered to build. A character people recognise and an easy setup count as much as the art. Ideas get copied within weeks, and since AI writes most of the code, nothing technical stops a copy. What a copy can't take is the audience of the account that promotes the tool. Copying a mechanic is common, and the scene dislikes copies that don't give credit. ◆ Disliking a creator's business doesn't justify harming her.

A drawn persona can grow in a way a photographed one can't, because pictures, voice lines and lore can be made in bulk. A fixed look makes her easy to recognise, even as a thumbnail. ◆

Many drawn personas are run by someone other than the character, and it's often a man. ◆ People say it all the time, and there's no official number. Some personas that look like a team are one person using AI tools. ◆ In classic findom, press describes scammers who post stolen photos of attractive women. ◆ The same trick can work with stolen or generated art. ◆

The one academic survey of findommes cited in this wiki had 56 respondents, and most identified as women. ◆ No study of who runs 2DFD personas could be found for this wiki as of 2026-11-03. ◆

MYTH	FACT
~~The woman in the pictures is the one who answers.~~	The character is a role, and you don't know who's playing it. ◆
MYTH	FACT
~~A beautiful persona proves the person behind her is real.~~	Beauty proves nothing, because art can be stolen or generated. ◆

PART 04

Attention, burnout and the first send

Attention is what runs short. A dom's day is split between messages, posting, the community and the rest of her life. People who chat and never send can still eat up her day. ◆ Press accounts note that some submissives mainly want to talk to women. ◆ Findommes in the academic survey reported verbal abuse and unsolicited sexual images from clients, and named secrecy as one of the worst parts of the work. ◆ Burnout is the usual way people leave. Taking a pause is fine, and comparing yourself with faster doms only makes it worse. ◆

Protect your attention

1. Before the day starts, set a daily time limit for contacts who don't send.
2. Tell people who chat for free that you're busy, and don't sell your time short.
3. Show your rules first: limits, prices and a way to stop.
4. When stress takes over, pause and say so. A pause doesn't need drama.

How a persona lets people in matters too, and each way costs you something. A small fixed entry send is easy to pay and easy to walk away from, while conditions like one or two sessions ask more of you before you know her. Some legitimate dommes want payment up front, partly to keep out time-wasters and fakes. A 2017 press feature describes a drive-by as a one-off client who pays a minimum tribute.

Some doms ask for a session or two after a first send. Decide beforehand whether you'll accept that, and how many. A hidden price gets you into a conversation before you know what it costs. Ask for the full cost in writing before you send anything.

PART 05

Pressure you may meet

Slot games with near-misses on purpose, bets that go up as the effects grow, and bets with no prize for winning are all standard. Gacha mechanics are copied from commercial games: rarity stars, pity counters, banners and

farming loops. The dom who builds them knows what they do. ◆ Numbers does the maths.

RED FLAGS

Designs that look like fun

- The reel stops one step short of the prize, again and again.
- A bet has no prize at all for winning.
- A tool copies a pity counter and banners from a commercial game.
- The only way out of a lock is to buy something.

Counter. Close it and say stop. Do the sum in Numbers before you send anything. The least a tool owes you is a free stop that always works.

The same toolkit holds pressure tactics that some people call a method. ◆ At the hard end, press reports include lines pushing a man to sell his car or house as proof of love. ◆ Reports also describe blackmail and people in support groups being targeted. ◆

Tactics, and how to refuse them

WHAT THEY SAY OR DO

01 *You're special, I care about all my subs, you don't have to send*

THE COUNTER

Judge a dom by what she actually asks for and rewards. If everyone sends anyway, the reassurance means nothing.

WHAT THEY SAY OR DO

02 *I could make you send a fortune with one word, and I won't, because I care*

THE COUNTER

The power is there whether she uses it or not. Trust built like this is dependence.

WHAT THEY SAY OR DO

03 *The doms you paid before are losers*

THE COUNTER

Rate a dom by how she treats you, and ignore how she rates others.

WHAT THEY SAY OR DO

04 *Praise, titles and new projects for work you do for free*

THE COUNTER

Agree in advance what you'll do, and keep the right to say no without losing your place.

WHAT THEY SAY OR DO

05 *A short firm command, a finished example that makes it look easy, then the same command again when you hesitate*

THE COUNTER

If you hesitate, there's a reason. Sleep on it, and decide in your own time.

WHAT THEY SAY OR DO

06 *Hand over your public account so it can show your sends*

THE COUNTER

Never. Your account is your identity.

These lines are common in the scene. They're here so you can see them coming.

Scene drama reaches subs too. Feuds spill into subs' accounts, and a call-out can be one dom using other people to hurt another. A rumour can spread private screenshots to dozens of people before anyone checks. Supporter names show on public wishlists, and doms who are friends look at each other's pages. Assume the name you use is known across the scene. ◆

TRY IT

A screenshot reaches you

A screenshot is going around that seems to show a dom admitting she's secretly a sub.

A Post it, because others should know

Not this one. A screenshot is easy to forge, and a rumour like this can cost a dom her subs before anyone checks. ◆

B Don't pass it on, and ask her directly if you know her

The right answer. Reputations travel by hearsay, and forwarding a screenshot is a common way to smear someone. ◆

C Wait until more people repeat it

Not this one. Repeating it doesn't make it true. Hearsay grows by being repeated. ◆

PART 06

What a serious dom shows

Before she asks for money, a serious dom shows you her rules: her limits, what she throws out, the plain truth about prices and a clear way to stop. She tells a sub ahead of time when he mustn't send, and what happens then. If money meant for someone else reaches her, she passes it on at once and says so. She checks availability before she promises a gift. A dom who hides these has told you what she is. ◆

Whatever a sub tells her about his money, a serious dom doesn't use it to ask for more. I've heard people argue that most subs who say they're broke are lying. If that's wrong, he's the one who pays for it. ◆

Some makers disguise what a payment page really is. ◆ I don't describe how any of that is built. A processor that catches it can freeze the funds, a sub's money included. ◆ If your bank says no, that's your answer. A real dom never needs a workaround.

If any of this sounds familiar, set a limit while you're calm, keep a stop that works at once, and wait before you raise either. ◆ If sending already feels hard to stop, read The spiral and Where to get help.

TRY IT

Check yourself

QUESTION 1 OF 2

A dom's follower list is long. What does it tell you about her income?

- ◯ That many people pay her
- ◯ Very little, because followers can be other doms or people who never send
- ◯ That she can refund you

Answer. Very little, because followers can be other doms or people who never send. Income comes from a handful of people, and a long list can hide how few they are.

QUESTION 2 OF 2

A dom says she could make you send a fortune with one word, and that she won't because she cares. What do you do?

- ◯ Trust her more
- ◯ Notice that the power is there whether or not she uses it
- ◯ Send a little to thank her

Answer. Notice that the power is there whether or not she uses it. Showing power and then holding back builds trust and dependence at the same time.

REMEMBER IT

- Few people pay most of the money, and they come and go.
- Warmth can be sincere and still steer your spending.
- Hours of work don’t buy reach, and none of the rules for staying visible has been checked.
- People often say the person behind a persona is someone other than the character, and there’s no official number.
- Judge a dom by her rules, what she asks for and what she rewards. If your bank says no, that’s your answer.

Accessed 3 November 2026

60 Feuds spill into subs' accounts, and a call-out can be one dom using other people to hurt another.

◆

61 A rumour can spread private screenshots to dozens of people before anyone checks.

◆

62 Supporter names show on public wishlists, and doms who are friends look at each other's pages.

◆

63 Assume the name you use is known across the scene.

◆

64 A screenshot is easy to forge, and a rumour like this can cost a dom her subs before anyone checks.

◆

65 Reputations travel by hearsay, and forwarding a screenshot is a common way to smear someone.

◆

66 Hearsay grows by being repeated.

◆

67 Before she asks for money, a serious dom shows you her rules: her limits, what she throws out, the plain truth about prices and a clear way to stop.

◆

68 She tells a sub ahead of time when he mustn't send, and what happens then.

◆

69 If money meant for someone else reaches her, she passes it on at once and says so.

◆

70 She checks availability before she promises a gift.

◆

71 A dom who hides these has told you what she is.

◆

72 If that's wrong, he's the one who pays for it.

◆

73 Some makers disguise what a payment page really is.

◆

74 A processor that catches it can freeze the funds, a sub's money included.

◆

75 If any of this sounds familiar, set a limit while you're calm, keep a stop that works at once, and wait before you raise either.

◆

BASICS • CHAPTER 8

Numbers

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

There’s no measured income figure for 2DFD. This chapter sorts the numbers you’ll hear by how far you can trust them, and shows you the sums you can do yourself.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian’s field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 Nothing in the 2DFD scene has been measured. Every income figure is memory, a guess or a rumour.

02 The usual case is small: very few subs really send, and one of them can bring in most of the money.

03 The price of one item hides the total. Multiply before you send.

04 Fixed fees decide which payment rail pays off, and tax changes what a share really costs.

05 Big figures are the bait. Read them last, and as hearsay.

YOU WILL LEARN

- ✓ Which numbers are measured, documented, self-reported or hearsay.
- ✓ What a small persona's numbers look like.
- ✓ How to compute a break-even, a real price and an hourly rate.
- ✓ Which figures to distrust.

> *Here are the numbers, and how little most of them are worth. The small ones are common and nobody talks about them. The big ones are loud and mostly rumour. If a number can't be traced back to a source, treat it as a story.*
>
> — VIVIAN

PART 01

What is measured and what is not

The authors of the main academic study of findom say there's very little academic writing on it. ◆ As of 2026-11-03, this wiki found no measured figure for what a 2DFD persona earns. ◆

What has been measured

Independent counts of what 2DFD personas earn or what their subs spend, found as of 2026-11-03.

◆

Every number below is marked with one of four levels of trust.

How far to trust a number

◆	What it means	Where it appears here
Measured	Counted by an independent party, with a method	Nothing found
Documented	Printed on an official page with a date	Platform fee rates, in Where 2DFD happens; see the sources
Self-reported	A person's own count or memory	Counts of subs, running costs, reach
Hearsay	Heard about someone else	Strong months, bursts, launch figures

MYTH

~~Some drawn-persona doms earn a six-figure income every year.~~

☆ FACT

People hint at six-figure incomes, and nobody has shown one. Treat the claim as false until someone does. ◆

The small numbers

In my experience, the real numbers are tiny. A small persona has very few subs who really send. Here “active” means sending, not chatting. A long follower list can hold only a handful of people who pay regularly. ◆

Income comes from a few people and arrives unevenly. One sub can make up a large share of a small persona’s income. A strong week can be very good, and other days bring little or nothing. The biggest single sends are rare. ◆

A figure of about USD 1,000.00 for the first three months gets passed around, and nobody has checked it. ◆ It comes from one circle of people who stayed in touch. It leaves out the many who quit, so it makes the average look better than it is.

V

VIVIAN’S FIELD NOTES

People in this scene don’t talk about numbers. And the cost always falls on the person who sends.

◆

Peaks come after tool launches and then drop back. Look at the bursts from the sub’s side: behind a big week there’s often someone at his worst, late at night, after a relapse, or in a burst he regrets. ◆ Press reports describe men who sold cars, took on debt and took second jobs. ◆ If you’re the one sending in bursts, go to The spiral and Where to get help.

PART 03

What it costs to run a persona

A persona costs money before she earns any. Image and video generation, subscriptions, hosting and a domain add up, and one paying sub can't cover the tools. Some say a dom is doing fine when the sends easily cover her subscriptions. ◆ That only counts the dom's costs, and leaves out what the sub spent.

Running costs, quoted from memory

What AI tools can cost someone who builds tools. Prices change often, as of 2026-11-03.

◆

A domain, when the static site itself is hosted free.

◆

AI video, billed by the second. A failed try costs as much as a good one.

◆

A bigger budget doesn't mean more output. Someone on expensive tools can ship less than someone on a cheap plan.

Fees, rails and tax decide what's left. The fee pages quoted in Where 2DFD happens put platform commissions at about 10 to 20 percent. A dedicated adult card processor adds a yearly registration fee, a commission or reserve, and payout fees, and its payouts are tied to your real legal identity. Read each provider's own current page, and ask its sales team yourself about fees, reserve, taxes and payout currency.

Compute a break-even before you choose a rail

1. Write down the processor's fixed yearly fee, F.
2. Write down the commission rates: p for the processor and c for the platform.
3. The break-even is F divided by (c minus p), in yearly sales.
4. Made-up example: F is USD 1,500.00, p is 10 percent and c is 20 percent. The break-even is USD 1,500.00 divided by 0.10, which is USD 15,000.00 a year. Below that, the platform costs less.
5. Compare it with your honest yearly estimate, never with your best month.

Tax changes what a percentage costs you. In many countries this kind of income is probably taxable, but the rules vary, so ask a professional. The maths is simple. Say tax takes 40 percent, so you keep 60 percent. A 15 percent

share promised on the gross is then 25 percent of what you keep. A cost of USD 300.00 a month needs USD 500.00 in sends.

PART 04

The real price of a mechanic

A wishlist is a price menu: about ten themed rungs, from a coffee-sized gift to a showcase item, and the dom moves a sub up one rung at a time. ◆ Other tools offer fixed tiers or a wheel. Whichever it is, do the sum.

Ladders, and the sum for each

◆	Typical shape	The sum to do
Wishlist	About ten rungs, one gift per rung	The top rung makes the others look small. Ask what the next rung is for.
Fixed-tier button	A few fixed amounts, from about USD 3.00 to USD 30.00 ◆	Amount per press times presses per hour
Wheel	Fixed tiers from about USD 1.00 to USD 100.00	Add up each price times its chance. Ask for the odds.

The price of one pull hides the total. Builders copy the pity counter from commercial games, and I've seen a guarantee after about 80 pulls discussed.

- At USD 3.00 a pull, getting the guarantee costs USD 240.00. At USD 5.00 it costs USD 400.00.

Two modes are common: a flat price, and a random item from the wishlist. Most subs pick the flat one, and the random mode produces single sends several times bigger. A tool that runs by itself changes the scale. One gift of USD 1.00 every 6 seconds is USD 600.00 an hour. With no pause between purchases, a tool can send a hundred gifts in a few minutes, so the pause is the main thing that slows it down. A lock you can only leave by buying something takes away the free stop, and that's how it makes money.

A house edge of 5 percent means the house keeps on average USD 5.00 of every USD 100.00 staked, over many rounds. The Casino made by Vivian is planned with fictional chips and edges of 5 to 10 percent. These are planned figures, and nothing has been measured yet.

TRY IT

Two modes

A tool offers a flat mode at USD 5.00 a press and a random mode where each press buys a random wishlist item. You've set a limit in advance.

A Pick the random mode, because it's more exciting

Not this one. Random modes produce much bigger single sends, and you can't say what one press will cost. ◆

B Pick the mode where you know the most one press can cost, and check the total against your limit

The right answer. A limit only works if you can price every press in advance. ◆

C Skip the sum, because your limit will stop you

Not this one. A limit you have to hold by yourself, in the moment, doesn't hold up well. Do the sum first. ◆

TRY IT

Do the sum

QUESTION 1 OF 3

A design guarantees its top reward after 80 pulls at USD 3.00 a pull. What's the real price?

- ◯ USD 3.00
- ◯ USD 240.00
- ◯ USD 80.00

Answer. USD 240.00. You only reach the guarantee after the whole run: 80 times USD 3.00.

QUESTION 2 OF 3

A tool sends USD 1.00 every 6 seconds. What does it send in an hour?

- ◯ USD 60.00
- ◯ USD 600.00
- ◯ USD 6.00

Answer. USD 600.00. 3,600 seconds divided by 6 is 600 sends.

QUESTION 3 OF 3

A board ranks doms by the number of gifts. What does the top place show?

- ◯ The most money received
- ◯ The most gifts received, which tiny sends can inflate
- ◯ The best dom

Answer. The most gifts received, which tiny sends can inflate. Ranking by count says little about income. ◆

PART 05

Reach, time and asking

Measure your reach instead of guessing it. It varies a lot between accounts of the same creator. In my experience, for a small account the first hour of an ordinary post brings a few hundred views, a typical post one to two thousand, and a lucky spike eight to ten thousand. A repost from a bigger account is often the only boost. ◆

Time is the other budget. A persona working part-time can handle far fewer subs than one working full time. Fast releases hide the preparation: someone who ships often has probably prepared for months. Drawn content can be made in bulk: a local setup can produce hundreds of pictures, while weak hardware takes minutes for one. ◆

Asking is what moves the money most, and you're the one being asked. A dom who answers nearly everyone earns more than one who skips sessions she could take. Asking again and again is how a pressure tactic works, and you can say no every time. If you're asked again after you said stop, that's the tactic,

and Pressure tactics, both ways names it. Timing an ask to your payday or balance, or putting a deadline on your decision, is the same tactic. ◆

PART 06

Numbers to distrust

A claim of a very large income

WHAT IT TELLS YOU

Unverified until someone shows it. Nobody has measured income for drawn personas. ◆

A big following

WHAT IT TELLS YOU

It tells you nothing about how many people pay. ◆

Top of a leaderboard

WHAT IT TELLS YOU

It may rank by number of gifts instead of amount. ◆

A strong month

WHAT IT TELLS YOU

A peak, and the average is lower. It comes from the people who stayed in the circle. ◆

The price of one pull

WHAT IT TELLS YOU

It hides the total. Multiply first. ◆

A house edge of 5 percent

WHAT IT TELLS YOU

A planned figure until someone measures it. ◆

Sends cover my subscriptions

WHAT IT TELLS YOU

It only counts the dom's costs. It leaves out what the sub gave up. ◆

Hearsay goes last, on purpose. People quote USD 5,000.00 to USD 15,000.00 for the best single month of established doms, with a typical strong month lower, and nobody has checked it as of 2026-11-03. ◆ People also describe a burst in the low thousands of USD from one sub within a few days, and senders like that often don't last. ◆

The big figures are the bait. Printed first, they'd make this look like easy money, and in my experience the usual case is small and the costly case is large. ◆ Anything built to profit from a sub's debt is exploitation, and Where to get help is where to start.

REMEMBER IT

- Nothing in this scene has been measured. Every figure has a trust level.
- The usual case is small, and most of the money comes from very few people.
- A unit price hides the total. Multiply before you send.
- Compute the break-even for a payment rail, and remember that tax changes a share.
- Big figures are hearsay. Read them last.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.

VARIANTS • CHAPTER 1

Tributes, sends and wishlists

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

A tribute is a gift, a send is one click, and a wishlist is the menu behind both. Here's what each one is, what the wishlist platform says about it, and where the pressure comes in.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A tribute is a gift. It buys no service and no promise, and nobody can make her keep one.

02 A wishlist is a price menu. The names and prices on it shape what you send.

03 Fees, names and messages follow the platform's rules, not the dom's.

04 Pressure during a send evening follows patterns, and each one has an answer.

05 Pick your number before the evening, make it real outside your own head, and keep a way to stop that always works.

YOU WILL LEARN

- ✓ What a tribute, a send, a cash gift and a wishlist are.
- ✓ What the wishlist platform's own help pages say about gifts, fees and privacy.
- ✓ How a send evening goes, and which nudges to refuse.
- ✓ How to set a limit that holds, and how to raise it safely.
- ✓ Which kinds of tribute aren't money.

> *Everything in this chapter comes down to one habit: you pick your number before the evening, never during it.*
>
> — VIVIAN

PART 01

A tribute buys nothing

A tribute is money or a gift you give a dom as homage. A send is one act of giving: one link, one amount, one click. A wishlist is the list of items a dom posts so a sub can pick one and pay for it. ◆ Researchers describe findom as a practice where a findomme is paid in cash or in wishlist gifts. ◆ One domme in the press calls tribute unconditional rather than a fee. ◆

In the 2DFD scene, the platform most people use for this is Throne. ◆ Its help pages, as of 2026-11-03, set the frame: everything on a wishlist has to be a gift,

and you can't use Throne to exchange goods or services. ◆ Profile text can't offer content or services in exchange for gifts. ◆ A Cash Gift has to be tied to a real physical product, isn't a tip jar, and can't be used for adult services, tips or donations. ◆

A gift can't buy a promise: nothing said in a scene can be enforced, and a send never comes back. Count every send as gone the moment you make it. ◆

MYTH ~~I paid, so she owes me a reply or a place.~~	☆ FACT A wishlist item is a gift. It isn't an exchange of goods or services. ◆
MYTH ~~A cash gift is a flexible tip.~~	☆ FACT A Cash Gift is tied to a real product and isn't a tip jar. ◆
MYTH ~~A bigger send buys a safer place.~~	☆ FACT In my experience a big send buys attention for one evening, and then the attention moves to the next sender. ◆

PART 02

The wishlist ladder and what it costs

A wishlist is a price menu. Items have themed names and sit on a ladder from a token amount to a very large one. In my experience a ladder runs from about USD 1.00 to about USD 1,000.00, with one gift and one link per rung. ◆

What each rung does to you

	Typical name	Effect on you
Bottom	A coffee	Feels like nothing
Middle	A dinner	Where a lot of evenings end up, in my experience
Upper	A clothing piece	The name makes a big number feel like a small gesture
Top	A very large gift	Rarely used in my experience, but it makes every lower rung look small

That table comes from the ladders I've seen. Nobody has measured it.

V

VIVIAN'S FIELD NOTES

The names and prices steer what you send: the first item you see sets the number that feels normal. Read the price and ignore the name.

Part of what you pay never reaches the dom. Throne says creators pay no checkout fees, and fans pay a fee at checkout. ◆ The figures below are Throne's as of 2026-11-03, and they can change.

What Throne lists, as of 2026-11-03

Service fee on physical gifts shipped by Throne, paid by the fan inside the item subtotal, as of 2026-11-03.

◆

Service fee on Cash Gifts, Direct Credit and Payout items, as of 2026-11-03.

◆

Payment processing fee on physical and non-payout items, as of 2026-11-03.

◆

Fee on creator withdrawals under USD 30.00, as of 2026-11-03.

◆

Count the fee when you pick your number. What leaves your account isn't what reaches her. ◆

How a send evening pushes you

A send evening has a set shape, and knowing it protects you more than anything else. ◆ There's more in How an evening goes.

What you'll see from your side

1. The dom opens with a teaser or a short command.
2. She posts one item link at a time, sometimes with an image.
3. You click, pay and confirm.
4. She answers with attention: praise, a pet name, an image.
5. The next link arrives.

She sets the pace, and the reward often comes late or only partly. That little delay keeps you waiting for the next send. ◆ Techdom and Games and casino play are built on the same rhythm.

Some of what she does inside that rhythm is pressure. Here it is, so you can spot it and say no. ◆

Pressure patterns and the counter

WHAT THEY SAY OR DO

01 *The links stop and you must beg for the next*

THE COUNTER

A made-up shortage makes the next send feel worth more. Your number stays the same.

WHAT THEY SAY OR DO

02 *Praise for a small send, then a hint you could give more*

THE COUNTER

That's a sales line. If she names your balance, the money part is over.

WHAT THEY SAY OR DO

03 *After one session you're told you owe a round figure*

THE COUNTER

There's no debt unless you agreed to one in advance. Leave.

WHAT THEY SAY OR DO

04 *A promised image is held back until you send more*

THE COUNTER

If a reward was promised for a send, it was part of that send. Stop sending.

WHAT THEY SAY OR DO

05 *A dare where you can only lose*

THE COUNTER

A bet with no prize for winning is just a payment. Say no, or set the price first.

WHAT THEY SAY OR DO

06 *A caption saying your rent paid for her scene*

THE COUNTER

That's theatre. Your rent is still yours.

WHAT THEY SAY OR DO

07 *A public tally or ranking of sends*

THE COUNTER

A ranking rewards spending, not devotion. Don't read a rank as income or wealth.

WHAT THEY SAY OR DO

08 *An image aimed at a taste you named, sent after you said no*

THE COUNTER

You can refuse. A dom who cares asks first.

These patterns come from my field notes. There's no count of how often each one happens. ◆

More patterns, with the full answer to each, are in Pressure tactics, both ways. ◆

V

VIVIAN'S FIELD NOTES

My own rule: if you tell me money is short, the money part of the evening is over. A dom who answers that with a bigger ask has shown you who she is. Believe her.

◆

PART 04

Set a limit and keep it

Your limit comes first. It's the most you'll send, and you pick it yourself, calmly, before the evening. A limit you pick in the middle of a session is weak, because the session is built to push it up. ◆

Set a limit that holds

1. Pick the number while you're calm, from money you could lose without missing it. Never from borrowed money, rent or savings.
2. Add the fees, so the number is the total that leaves your account.
3. Make the limit real outside your own head: a bank limit, a separate account, or a person you trust.
4. Raise it only after a wait of a night or more, never during an evening.
5. Know how you'll stop before you start: close the chat, mute the dom, leave the page. It has to cost nothing and work straight away.

If you run a wishlist, you have your part to do. Name your rungs honestly, don't keep a public tally of sends, never name a sub's balance, and end the money part when a sub says money is short. Doing it safely often means earning less, and I'll say that openly. ◆

If spending is already hard to stop, go to The spiral and Breaks that hold before the next evening. ◆ If it's already hurting you, see Where to get help.

Free, confidential helplines exist in most countries.

Find a helpline →

PART 05

Privacy, platform rules and old links

Here's what Throne's help pages say the platform shows, as of 2026-11-03. ◆

- A gifter can pick any gifter name, or none at all. ◆
- A gifter's payment details and email are never shared with the creator. ◆
- A gifter can check out as a guest, without a Throne account. ◆
- A gift message can be public, and a public message can show up as a stream alert. ◆
- No fan sees the creator's address, delivery name or other identifying details. ◆

Where you really get exposed is outside the platform: a server channel that logs sends, a leaderboard, a public tally. A good persona shows missions and never shows an amount. ◆

Some doms ask for a screenshot of your send history. You can say no. A screenshot is easy to fake, so it proves very little for anyone. ◆

Where the money lands, the dom isn't anonymous. Throne asks creators to verify their identity before they withdraw funds. ◆ Its terms require a name, full address, phone number and email at registration. ◆

Throne says it welcomes adult creators within stated limits, and its rules apply the same way to real photos and to drawn or anime-style art. ◆ It doesn't allow explicit sexual acts in any format. ◆ Its list of banned fetish content

names BDSM scenes focused on pain, domination or humiliation, and the page doesn't mention financial domination. ◆ Breaking the rules can get items removed or the account suspended. ◆

Payment companies have rules of their own. PayPal says it doesn't allow buying or selling sexually oriented digital goods or content. ◆ All the money in this scene goes through companies the scene doesn't own, and any of them can stop processing it. ◆

V

VIVIAN'S FIELD NOTES

When a platform changes a rule, tools built around it break and wishlist items get rebuilt. A link pasted weeks ago can lead to an item that's gone, or to a different price. Go through the dom's own page instead of a pasted link. See Spot a fake dom.

◆

PART 06

Tribute that isn't cash

Tribute doesn't have to be money. A wallpaper, a written message, fan art, a generated image or an in-game gift all count as devotion in the scene. A dom can give you work instead of asking for money, and a skill is often the safer way to belong. ◆

V

VIVIAN'S FIELD NOTES

Work for a dom is fair only if you chose how much, you can say no without losing your place, and she thanks you. Otherwise it's unpaid work she calls devotion.

◆

Physical gifts come with practical problems, like overseas shipping, a proxy or a seller who's stopped selling, so check before you promise. ◆ Work and customs are covered in Tasks, customs and private sessions.

TRY IT

Your budget is spent

You set USD 50.00 for the month and it's gone. A dom you like hints that you could do more. What do you offer?

A Say the money part is over for the month, and offer something you choose to make

The right answer. Your limit held. A tribute can be small and still be real.

B Borrow a little, just this once

Not this one. Borrowed money is where the harm starts. A limit that bends once isn't a limit.

C Send lots of tiny amounts so it doesn't feel like breaking your limit

Not this one. The total is the total. Splitting it changes nothing.

D Offer unlimited free work

Not this one. Unpaid work needs terms: you set the scope, you can refuse, and you get thanked.

TRY IT

Check yourself

QUESTION 1 OF 3

What does Throne say about wishlist items?

- ◯ Everything on a wishlist must be a gift
- ◯ A gift can pay for a service
- ◯ A Cash Gift works as a tip

Answer. Everything on a wishlist must be a gift. Throne says everything on a wishlist must be a gift, and a Cash Gift is tied to a real product.

QUESTION 2 OF 3

A dom says you owe her a round figure after one evening. What do you do?

- ◯ Pay it, since it was said in the scene
- ◯ Leave, because there's no debt unless you agreed to one
- ◯ Negotiate a smaller amount

Answer. Leave, because there's no debt unless you agreed to one. A debt only exists if you agreed to it beforehand. A claim made after the fact is a pressure line.

QUESTION 3 OF 3

When is the best moment to raise your limit?

- ◯ In the middle of the evening, when you feel sure
- ◯ After waiting a night or more, when you're calm
- ◯ Whenever she asks

Answer. After waiting a night or more, when you're calm. A limit set in the moment is weak. Waiting gives the calm version of you the final word.

REMEMBER IT

- ♥ A tribute is a gift. It buys no service and no promise.
- ♥ The wishlist is a price menu: read the price and ignore the name.
- ♥ Count the fees in your limit, and make the limit real outside your own head.
- ♥ A made-up shortage, a debt claim or a named balance is a sales line. Treat it as one.
- ♥ Tribute can be a message or a drawing, and work needs terms.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 A tribute is money or a gift you give a dom as homage.

◆

02 A send is one act of giving: one link, one amount, one click.

◆

03 A wishlist is the list of items a dom posts so a sub can pick one and pay for it.

◆

04 Researchers describe findom as a practice where a findomme is paid in cash or in wishlist gifts.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

◆

VARIANTS • CHAPTER 2

Techdom

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

Techdom is domination carried out by tools: software that sends, likes, locks or takes over, with the sub's agreement and a stop he controls. Here's what it is, who wants it, and where consent ends.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Techdom means a tool does part of the dominating, with the sub's agreement given beforehand and a stop he can use at any moment.

02 A tool can take three things from you: money, attention or control of your machine. The further down that list, the more you hand over.

03 Doms like it because it earns while they're away. Subs like it because it takes the decision off them, and that's also its main danger.

04 Remote control of your computer is the riskiest offer, and the request is the same one a common scam makes.

05 Trust a tool for the limits you can see, never for the dom's word.

YOU WILL LEARN

- ✓ What techdom means in this wiki, and which tools it covers.
- ✓ Why doms build tools and why subs ask for them.
- ✓ What a remote session really hands over, and how to say no to one.
- ✓ What consent looks like inside a tool, and which pressure designs to refuse.

> *A tool can hold the rules better than a person can. The only one I'd trust has three things built in where nobody can change them mid-session: an amount, a limit and a way out.*
>
> — VIVIAN

PART 01

What techdom is

techdom is the part of 2DFD where a tool does the dominating. The dom sets the rules, and software on the sub's own computer, phone or accounts carries them out. The usual examples are an extension that sends gifts on its own, and one that likes and reposts the dom's posts from the sub's own account. There are also apps that set his wallpaper or lock his device, and live sessions where the dom drives his screen. ◆

Some creators use the word more loosely, for any corner of the scene where someone builds something with tech instead of just talking. Here it means the narrow thing, because that's the version that can be made safe: a tool acts for the dom, the sub agreed beforehand, and he has a stop that works at every moment. ◆

Handing a decision to someone else and to a machine is a fantasy adults are free to choose. Done well, the machine shows you the rules in numbers. Done badly, it takes away the pause where you'd change your mind. ◆

What a tool can take from you

	What it does	What you hand over	The question to ask
Auto-send tool	Buys gifts from a wishlist on a repeating cycle	Money, and the decision each time	Who enforces my limit, and where is it kept?
Auto-engage tool	Likes and reposts the dom's posts from your social account	Attention, and the standing of your account	What happens to my account if the platform objects?
Device control	Sets a wallpaper, locks a phone or a computer	Control of a device	Can I end it at once, for free?
Remote session	The dom sees and drives your screen	Everything that's open on the machine	Can I end it myself, and what's on my screen right now?

The table runs from least to most: the further down, the more you give up, and the more a limit and a stop matter. How each kind works is in How techdom tools work, and the rules a safe tool follows are in Safe design.

PART 02

Why doms build it and why subs ask for it

For a dom, a tool means subs can pay while she's not there. Chasing sends around the clock can earn more, but it eats all her time. Some doms also get a thrill from waking up to a batch of silent sends that came in overnight. For some, watching a sub send is the kink itself, and a live chat can run next to a tool sending in the background.

For a sub, giving up the decision is the whole point. Once he presses start, he doesn't choose anymore. Some subs describe the draw as the thrill of giving up control of their finances.

Tools sell on arousal more than on polish, so judge a tool by its limits and ignore the pitch. Results get seen: a post showing a tool running or a send landing brings in messages, and pictures alone bring in few. Ideas get copied fast, and what really counts is the reach of the account promoting the tool.

V

VIVIAN'S FIELD NOTES

What makes a tool exciting is also what makes it dangerous: nobody has to decide again. One decision, made while aroused, turns into a stream of payments nobody watches. When I see a silent send that repeats with no message, I ask him how he's doing before anything else.

◆

PART 03

Remote sessions

A remote session gets sold as a private session. The dom connects to the sub's computer, sometimes for hours, and may change his wallpaper, watch him play, or act as him on his accounts. Usually she asks him to approve full control and block his own keyboard and mouse, so he can't interrupt. She can see everything open on the machine: files, saved passwords, mail and chats. ◆

It's the riskiest thing techdom offers, and it's the same move a well-known scam uses. Public agencies tell people not to give a stranger control of their computer or phone. ◆ One remote-access vendor states that it provides no remote support services, so callers claiming to be its support aren't genuine, and it advises against giving device access to anyone you don't know or trust. ◆ A dom who asks you to open remote software, even as a joke, is making exactly the request a scammer makes. ◆

RED FLAGS

A remote-access request is a red flag when

- It comes from someone you met recently, or late in a long, warm chat.
- It's framed as a joke, a dare or a test of trust.
- It asks you to read out a connection code, or to install software you didn't look up.
- It asks you to block your own keyboard and mouse.
- It will run while you're away from the screen.

Counter. Say no to the remote part and offer screenshots, or a shared screen you can end yourself. They cover almost every purpose, and nobody who plays fair needs more.

Saying no costs nothing. Here's how to do it and keep the stop in your hands.

How to refuse a remote session

1. Say no to remote control in plain words, however warm the chat has been.
2. Offer screenshots instead, or a shared screen that you start, limit to one window and end yourself.
3. Never install remote-access software because someone asks, and never read out a connection code.
4. Never agree to block your own keyboard and mouse. Blocked input takes away your stop.
5. If you already gave access, end the connection yourself, remove the program, change any password that was visible on screen, and read Where to get help.

PART 04

What consent looks like in a tool

You agree to a tool before the session, in plain words, and you can take that agreement back. A yes given in the moment is weak: one press account asks whether it's really consent when a client is too aroused to think straight about taking on debt. ◆ Consent covers only what the sub knew the tool would do. A tool that does more has gone past what he agreed to.

Handing over access is never part of the game. Press interviews note that some doms ask for debt contracts or control of a sub's bank accounts. ◆ A tool can be a faster way to hand over the same thing.

Trust the design of a tool, never the dom's word. Whoever runs a tool can use whatever it reaches, at any moment. A techdom tool you can trust shows its limits, has an emergency stop, keeps a record of what it can see, and can't do anything without the sub. ◆ For a browser extension, the Chrome Details page shows which sites it may read and change, so you can look before you press start. ◆ The full check is in Check a tool before you install it.

A tool that respects consent usually looks like this:

- It arrives switched off, and it does one named thing on one named site.
- You set the limit before you start, and something other than the page you're looking at enforces it.
- A running total is always visible, and a payment only counts once it's confirmed.
- A stop is always on screen, works in every state of the tool, and costs nothing.
- Any control program has a quick exit, like a shortcut or a button, and a safety word agreed beforehand.
- A command you didn't accept inside the program never runs.
- A trigger, like a sound you were taught to obey, has an agreed way to be switched off.

The design rules behind this list are in Safe design.

Pressure that comes with the tool

WHAT THEY SAY OR DO

01 *A setting that locks the off switch, so that uninstalling is the only way out*

THE COUNTER

Don't turn it on. A lock you can't undo is a trap. Uninstalling is a last resort and doesn't count as a stop. ◆

WHAT THEY SAY OR DO

02 *Any device lock whose exit costs money*

THE COUNTER

An exit you have to pay for isn't an exit. Stick to tools you can close for free. ◆

WHAT THEY SAY OR DO

03 *A hidden total, or a random price you can't see before the charge*

THE COUNTER

Ask for the price first. If you can't see the total, lower your limit or walk away. ◆

WHAT THEY SAY OR DO

04 *A tool that announces each run publicly, so stopping becomes visible and the dom can see who runs it and how often*

THE COUNTER

That makes stopping harder. Ask for private runs. ◆

WHAT THEY SAY OR DO

05 *A chain of share links that drafts a post under your own name, each draft more committed than the last*

THE COUNTER

Read every draft before you publish. It goes out on your own account, so stop at the first draft you wouldn't sign.

WHAT THEY SAY OR DO

06 *A mode that gets crueller or dearer as you pay more, or switches on after a few sends*

THE COUNTER

Intensity that grows with your spending is pressure. Decide your limits before you start.

WHAT THEY SAY OR DO

07 *Ad copy that sells a tool as costless, leaving the reader no reason to refuse*

THE COUNTER

A free tool still costs whatever it sends. Look at the limit and ignore the price tag.

WHAT THEY SAY OR DO

08 *Liking and reposting at speed from your own account*

THE COUNTER

The platform may restrict your account, and you pay for that, the dom doesn't. ◆

Safe design often means earning less, and the market rewards the opposite. A persona who ships a tool without a limit and a stop is selling a trap.

PART 05

Myths about tools

MYTH	FACT
~~A techdom tool only affects my computer.~~	A tool that acts through your accounts or your card reaches the services tied to them. Your social account can be limited, your bank sees every payment, and a remote session reaches whatever's open. ◆
~~If I trust the dom, I don't need limits.~~	Trusting a person doesn't set a limit. A limit, a wait and a stop work whether or not she deserves your trust. ◆
~~Silent sends mean a happy sub.~~	A recurring send with no message may be a tool running with nobody watching. Check in before you enjoy it. ◆
~~I can always close the program, so I don't need a stop.~~	Closing the window is the last resort. A tool needs a visible stop, a pause and a limit of its own. ◆

TRY IT

Late in a long chat

A dom you've talked to for hours suggests a private session through remote-access software. She says she'll take care of everything, and that you should block your own keyboard and mouse so nothing interrupts. What do you do?

A Decline the remote part, and offer screenshots or a shared screen you can end yourself

The right answer. Right. Blocked input takes away your stop, and a remote session reaches everything open on the machine. Almost anything she'd want can be done without it.

B Accept, because you've chatted for hours and trust her

Not this one. Hours of chat build warmth. They don't make you safe. Trusting a person doesn't set a limit, and the request matches a common scam pattern.

C Accept, but only on your work laptop

Not this one. A work machine holds other people's data, and you may not be allowed to share it. Remote control is the problem on any device, and blocked input takes away your stop.

What a tool takes, and what protects you

Money

A tool that buys gifts on a cycle. What protects you: a limit set in advance, enforced outside the page, and a stop that works at once.

Attention

A tool that acts on your social account. The platform may restrict your account, and the cost is yours.

Control of a machine

A lock, a wallpaper app or a remote session. Keep your own keyboard and mouse, and keep a quick exit.

Consent

Given beforehand, in plain words, covering only what you knew, and you can take it back at any moment.

Stop

Visible, free, and tested in every state of the tool.

If spending already feels hard to stop, see The spiral and Where to get help before you install anything.

REMEMBER IT

- Techdom is a tool that dominates with your agreement beforehand and a stop you control.
- A tool can take money, attention or control of your machine. Ask what it takes before you press start.
- A remote session reaches everything open on the screen. Refuse blocked input, and refuse any request from a stranger.
- Trust what you can see: a limit enforced outside the page, a free stop, and a visible total.
- A silent send that repeats is a reason to check in.

VARIANTS • CHAPTER 3

Gamedom

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

Gamedom is domination played through a game: shared sessions, tasks on the sub's account, and sometimes the staged or real loss of what he built there. Here's how the soft forms differ from the one that can't be undone.

EVIDENCE ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 Gamedom is domination that uses a game as its stage: playing together, tasks, staged scenes, and sometimes the loss of a real account.

02 Most of it is play. The part that takes something from you for good is the real destruction of an account you built.

03 Handing over a game login hands over more than a game, and many online games forbid sharing an account, so check the rules.

04 What's sold is the feeling. A staged scene gives you most of it, and you keep the account.

05 Gacha spending is real money. Your limit applies here like everywhere else.

YOU WILL LEARN

- ✓ What gamedom means and how its forms differ.
- ✓ What gacha cuck is, and why it's often a performance.
- ✓ What changes hands when a dom "fixes" an account, and how to say no.
- ✓ How to keep game play, gifts and unpaid grinding fair.

> *Gamedom is the gentlest way into this scene, with one exception: the part where you lose an account for real and can't get it back.*
>
> — VIVIAN

PART 01

What gamedom is

gamedom is domination that uses a game as its stage. The dom plays with the sub, gives him tasks inside a game, or builds a scene around his game account, and at its hardest she wrecks what he built there: items, progress, ranks. A persona's offer list usually includes a gamedom card. ◆

There's no study of gamedom I could find, and no source I could cite on how it's done, so this chapter comes from experience and is marked that way. ◆

The forms differ in what they ask of you. This table covers the whole chapter.

Three kinds of gamedom

	What happens	What you hand over	Can it be undone?
Playing together	Co-op or party games, game nights, streams	Time and company	Yes, you can leave at any moment
Staged destruction	A scene, an edit or a story about wrecking an account	Attention, and sometimes a spare account	Yes, nothing real is lost
Real destruction	Items, progress or ranks on your own account are lost for good	A login, and what you built	Rarely, and often never

PART 02

Playing together

The softest form costs nothing. A dom plays with a sub: a second character, a co-op round, a game night. The hard part is finding the time, and time zones and region locks can rule some games out.

A shared fandom makes a drawn persona feel real. The dom and the sub compare games, doms stream for their followers, and what keeps people together is the company rather than the money.

V VIVIAN'S FIELD NOTES

If you want the best part of gamedom with no risk, just play. A party game gives you the teasing and the story, and you keep your account and your money. I'd pick a regular game night over a wrecked account every time.

PART 03

Gacha cuck explained

Gacha cuck is a kink where a dom visibly destroys or takes a sub's game account, throwing away his spending or his characters. What makes it work is how attached he is: the more he built, the stronger the scene. It's often shown through edits, and viewers have noticed that some of them look staged.

As a performance, that's fine. Passing it off as real to other subs is lying to them. In my experience a dom rarely destroys items for real, because what sells is the feeling. Accounts can be props too, and a post showing a dom "repairing" an account after going quiet may be using one as its story.

Posts about a sub's game account spread further than an ordinary picture, which is why the theme is common, and a post proves nothing about what really happened.

MYTH	FACT
~~Every gacha cuck scene shows a real account being destroyed.~~	Many are staged edits or props, and a dom who sells the feeling doesn't need the damage to be real. ◆
MYTH	FACT
~~The sub chose it, so nothing can go wrong.~~	Choosing a loss at the start doesn't decide how he'll feel about it later. A destroyed account can't be restored. ◆
MYTH	FACT
~~Real destruction proves the dom is serious.~~	It only proves something was lost. You see how serious a dom is in her limits and her care, never in the damage. ◆

PART 04

Account fixing: what changes hands

In account fixing, the sub hands over a game login, and the dom plays while he watches, or without him seeing anything until she's done. Close cousins are game tasks for any title, and live tasks where the sub shares his screen and follows orders. ◆

Only the live task leaves your login with you. A game account is often tied to a saved payment method, a mail address and other services, and whoever holds the login can reach all of it. ◆ This wiki hasn't checked every publisher's terms, but online games commonly forbid sharing an account, so read your game's rules before you hand anything over. ◆

It’s also a scam script. A stranger who wants a login, a recovery address or a one-time code isn’t asking to play. ◆

RED FLAGS

A request for your game login is a red flag when

- It comes too early, too fast, or from someone you can’t check.
- It asks for the recovery mail, a login code or the second step of your sign-in.
- It targets your main account, the one with the most spending behind it.
- It asks you to buy something in the game first, as proof.

Counter. Keep the login. Offer a live task instead, where you share your screen and play, or use a spare account that holds nothing you love.

A safer version of the same scene

1. If you'd grieve the account, don't use it.
2. Use a spare account you can afford to lose, or let the dom tell the story through edits.
3. Keep the login, and keep your hands on the controls. The dom directs and you play.
4. Agree beforehand what's off the table, and a safety-word that ends the scene.
5. Set a limit for the evening, and put it on your card or tell a friend the number.

PART 05

Where gamedom meets money

Gacha spending is a well-established theme in 2DFD. A dom may want a sub to pay for her pulls, or she may pull live for a new character and invite someone to watch. In a session she may collect tributes all through the evening instead of once at the end, which keeps each decision small and the total easy to lose track of. Keep your own running total and check it against your limit after every send. A dom who stops you doing that is hiding the total. ◆

Doms and subs often play the same gacha games, and the scene uses the words for a heavy spender: whale, and gacha cuck. ◆ Those words make a real risk sound like a status. Compulsive in-game spending is real spending, and a pull charges your card like any other purchase.

Techdom designers borrow from commercial gacha games: pity counters, limited banners, farming loops. ◆ The mechanics that hook players hook subs just as well. Games where the house wins are covered in Games and casino play, and the rules for any tool that charges are in Safe design.

Subs also gift in-game items to their doms, and a dom takes it as proof her account is growing. It counts against your limit like any other send. Some subs grind a dom's accounts for her and do her daily farming. ◆ That's fair only if you chose how much, you can say no without losing your place, and she thanks you. Otherwise it's unpaid work she calls devotion.

PART 06

Mods, game rules and who else is playing

AI assistants now let people who don't code change items, skins or progression in many games. Modded versions with adult content get passed around as clips. ◆ Check the licence and terms of any game before you use a mod, because online games often forbid them. ◆

Minors may be on a shared game server. ◆ Adult mods belong only where every player is an adult, and every character in this scene is an adult, whatever the lore says. ◆ See What is 2DFD?.

TRY IT

She offers to fix your account

A dom you follow says your account looks neglected. She offers to take over the login for a night, play it for you and "fix" it, and says you don't need to watch. What do you do?

A Decline the login, and offer a live task where you share your screen and keep the controls

The right answer. Right. Your login stays with you, and you still get to play the scene.

B Hand it over, because she's been kind to you so far

Not this one. Kindness in a chat doesn't protect you. A login reaches payment methods, mail and more, and you can't take it back.

C Hand it over, but ask her to stay out of the shop

Not this one. A login that can play can also buy, and you can't control what a stranger does with it.

TRY IT

Check yourself

QUESTION 1 OF 3

Which form of gamedom keeps your login with you?

- ◯ Account fixing while you stay in the dark
- ◯ A live task where you share your screen and play
- ◯ Real destruction of your main account

Answer. A live task where you share your screen and play. In a live task you hold the controls. In the other two, someone else holds the login.

QUESTION 2 OF 3

A post shows a dom wrecking a sub's account. What does it prove?

- ◯ That the sub lost his account
- ◯ Nothing for certain, because edits and props are common
- ◯ That the dom is more serious than others

Answer. Nothing for certain, because edits and props are common. Staged scenes and props are part of the genre, and a post can't show what really happened.

QUESTION 3 OF 3

A sub grinds a dom's account every day. When is that fair?

- ◯ When he chose the scope, can refuse freely, and is thanked
- ◯ When the dom asks nicely
- ◯ When he has already given a lot

Answer. When he chose the scope, can refuse freely, and is thanked. Unpaid work needs terms. Without them it's free labour.

Gamedom words

Gamedom

Domination that uses a game as its stage.

Gacha

A game where random pulls give characters or items, usually for real money.

Pull

One random draw in a gacha game. Each one is a purchase.

Pity

A counter that guarantees a rare result after enough failed pulls.

Whale

A heavy spender. The word makes a risk sound like a status.

Gacha cuck

A kink where a dom visibly wrecks or takes a sub's account.

Account fixing

A format where a dom plays a sub's account. Ask who holds the login.

If a game is costing you money or login details you didn't plan to give, see The spiral and Where to get help.

REMEMBER IT

- Most gamedom is play, and playing together costs nothing.
- Many wrecking scenes are staged. What's sold is the feeling, and a staged scene leaves your account alone.
- A game login hands over more than a game. Keep it, and offer a live task instead.
- Pulls and gifts are real money. They count against the limit you set beforehand.
- Unpaid grinding needs terms: your scope, a free refusal, and thanks.

17 A destroyed account can’t be restored.

◆

18 You see how serious a dom is in her limits and her care, never in the damage.

◆

19 In account fixing, the sub hands over a game login, and the dom plays while he watches, or without him seeing anything until she’s done.

◆

20 Close cousins are game tasks for any title, and live tasks where the sub shares his screen and follows orders.

◆

21 A game account is often tied to a saved payment method, a mail address and other services, and whoever holds the login can reach all of it.

◆

22 This wiki hasn't checked every publisher's terms, but online games commonly forbid sharing an account, so read your game's rules before you hand anything over.

◆

23 A stranger who wants a login, a recovery address or a one-time code isn't asking to play.

◆

24 A dom may want a sub to pay for her pulls, or she may pull live for a new character and invite someone to watch.

◆

25 In a session she may collect tributes all through the evening instead of once at the end, which keeps each decision small and the total easy to lose track of.

◆

26 A dom who stops you doing that is hiding the total.

◆

27 Doms and subs often play the same gacha games, and the scene uses the words for a heavy spender: whale, and gacha cuck.

◆

28 Techdom designers borrow from commercial gacha games: pity counters, limited banners, farming loops.

◆

29 Subs also gift in-game items to their doms, and a dom takes it as proof her account is growing.

◆

30 Some subs grind a dom's accounts for her and do her daily farming.

◆

31 AI assistants now let people who don't code change items, skins or progression in many games.

◆

32 Modded versions with adult content get passed around as clips.

◆

33 Check the licence and terms of any game before you use a mod, because online games often forbid them.

◆

34 Minors may be on a shared game server.

◆

35 Adult mods belong only where every player is an adult, and every character in this scene is an adult, whatever the lore says.

◆

VARIANTS • CHAPTER 4

Hypno and edits

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

Hypno edits are loops, spirals, captions and censored images made to be watched again and again. It's a craft with a safety limit, and some edits are also made to keep you spending.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A hypno edit works through repetition, sound and a frame you agreed to. It doesn't take over anyone's mind, and agreeing to play doesn't guarantee you can switch the effect off.

02 A loop must never flash more than three times in any one second, and the point where it restarts counts.

03 Censoring an image is a presentation choice. It doesn't replace marking a post as sensitive where the platform requires it.

04 A sound or word used as a cue needs an off switch agreed before it's ever sent.

05 Some captions, teases and overlays are designed to feed spending, and you can learn to spot them.

YOU WILL LEARN

- ✓ What a hypno edit is made of, and what it can't do.
- ✓ How to test a loop against the three-flash limit.
- ✓ How censored teasers, captions and sound are put together.
- ✓ Where cues and triggers must never go.
- ✓ How to spot an edit that's steering your spending.

> *A loop repeats the same few seconds until you stop noticing you're watching. I like the craft, and I measure three things: how fast it flashes, how loud it is, and how you switch it off. A dom who skips those three doesn't care what the loop does to you.*
>
> — VIVIAN

PART 01

What a hypno edit is

Flashing content can trigger seizures and migraines in some people. ◆ If you have photosensitive epilepsy, a history of seizures, or migraines set off by flicker, don't watch loops or spirals. Stop at the first symptom and get medical help. See Where to get help.

A hypno edit is a picture, loop or clip made to be watched many times. It might be a spiral, a doubled image, words passing one at a time, or a caption about melting minds. ◆

Most of the effect comes from repetition, sound and a frame the viewer agreed to. A short phrase typed again between actions, a batch of short clips sent with orders to rewatch them, and wallpapers that keep a character on screen all day all work the same way. ◆

In my experience repetition can build strong habits and pairings, and agreeing to play doesn't guarantee you can turn the effect off. That's why the off switch comes first. ◆

MYTH	FACT
~~A hypno edit can take over your mind.~~	It's a game of repetition, sound and suggestion that starts with your agreement to play, and that agreement doesn't guarantee you can stop the effect when you want. Words like brainwashed and addicted are part of the act. ◆
MYTH	FACT
~~A censored teaser means a post needs no adult marking.~~	Censoring is a presentation choice and doesn't replace marking. Mark the account or post as sensitive wherever the platform requires it. Automatic adult marking is uneven both ways, and edits with nothing explicit in them have been marked anyway. ◆
MYTH	FACT
~~Pictures can't hurt anyone.~~	Flashing content can cause migraines, dizziness, nausea and seizures in some people. ◆

PART 02

The three-flash rule

The accessibility standard WCAG 2.2 sets a clear limit: a page must not contain anything that flashes more than three times in any one-second period, unless the flash stays below the general and red flash thresholds. ◆ A flash is a pair of

opposing changes in relative luminance. ◆ In plain words, the brightness jumps one way and then back.

The size of the flashing area counts too. The standard gives a rectangle of 341 by 256 pixels as an estimate of the part of the screen that matters. ◆

The limit in one line

flashes per second at most, in any one-second window of the page, as of 2026-11-03.

◆

A page with a loop on it should also respect the viewer's reduced-motion setting, which a browser reports as a request to reduce non-essential motion. ◆

V

VIVIAN'S FIELD NOTES

My own rules go further. The point where a loop restarts counts, because the loop hits it again and again. A loop that breaks the limit gets slowed down or doesn't get exported, and a stop control has to cut everything within one frame.

◆

Check a loop before you post it

1. Export the loop at the frame rate you'll post it at.
2. Measure the brightness changes frame by frame with a tool. Don't trust your eyes.
3. Count the flashes, each one a pair of opposing brightness changes, in every one-second window, including the window that crosses the point where the loop restarts.
4. If any window has more than three flashes, slow the loop, soften the contrast or remove frames, then measure again.
5. Offer a still or calmer version next to the loop for viewers who want less motion.

Making edits that work

Censoring. The usual pair is a censored teaser for the public feed and an uncensored full version for the people who paid, both with the same loop length. The 2DFD editor made by Vivian only exports that pair when something is actually censored. ◆

Censor styles and what to watch

	What it looks like	What to watch
Blur or mosaic	A soft or blocky cover	Compute it on exact averages so it doesn't look uneven
Noise or static	Grain over the area	The grain has to survive the platform's compression
Bars, plates and shapes	Clean covers, or an eye bar with a word	Keep them above the subject in the layers
Tint, neon or patterns	A decorative cover	The area still has to look covered
A cover that follows the subject	It moves with the character	Check every frame of the loop
A free-drawn area	Covers all but one chosen detail	Draw it by hand and look again

Layer order decides whether a censor holds. Every cover stays above the subject, and the hypno effect is drawn after those layers, so a doubled image

only copies what's already hidden. A preview scaled and recompressed the way the feed does it shows you whether the teaser will look right there. ◆

If a program finds the area to cover by itself, a person should confirm it before the export. A censor still doesn't replace marking the post, and an automatic check can mark an edit anyway. ◆ How marking works is in Posting and workflows.

Captions. A caption says one thing. A draft that contradicts itself looks lazy, and text on an image works better than the image alone. ◆

Same idea, two captions

Quiet is boring, and I love how quiet you are.

COHERENT

Quiet is what I asked for. Stay quiet.

Sound. Most feedback on a clip is about the sound. In my experience soft mouth noises work better than a song, a slow build-up or a silent opening loses the listener, and a very long file is better cut down to its strongest part. When the effects are far too loud, turn the volume down before you rebuild the edit. Binaural audio is a matter of taste, and I wouldn't promise it does anything specific. ◆

Feedback from subs is often vague, and a few direct questions turn it into something a dom can use. ◆

Turn vague feedback into questions

Example conversation. Invented for this exercise.

THEM

It was too much.

YOU

Too loud, too fast or too big?

THEM

Too fast, and the music was harsh.

YOU

Then a slower loop and a softer sound. I'll send a new version. Tell me what you hear.

PART 04

Cues and triggers

A cue is a short sound or word paired again and again with a reaction, until the sound alone brings the reaction back. The idea comes from clicker training, where a click marks the moment of a wanted behaviour. People who try a cue for the first time often find it stronger than they expected. ◆

That's why the off switch gets agreed before the first cue is ever sent.

Agree the off switch first

1. Say in plain words how the cue ends, and agree that either of you can end it at any time.
2. Agree on an ordinary phrase, used outside the scene, that means the cue is off.
3. Agree what the dom does when she hears it: stop sending the cue and say so.
4. Agree what the sub can do alone: delete the file, mute the sender, take a break.
5. Check in after a week. Does the cue still feel like play?

Arousal or trance-style content must never reach someone who’s driving or operating anything, because it can cause an accident. ◆

RED FLAGS

Where a cue never goes

- The person is driving, riding or operating a machine.
- The person is at work or anywhere a strong reaction would be unsafe or unwelcome.
- The person has said no, or never agreed to cues at all.

Counter. Don’t send it. If you get a cue in one of these moments, stop the sound and tell the sender the cue is off.

TRY IT

A cue works too well

A sub tells you that since you started sending a click, he hears it in his head during the day and loses track of his work.

A Stop sending the cue, tell him it's off, and ask how he is

The right answer. Right. This is the moment the off switch exists for. Talk once the cue is off. If it doesn't fade after the cue has stopped, a doctor or a counsellor is the next step.

B Send a stronger version to settle him

Not this one. That gives him more of what's causing the problem.

C Tell him it will pass and carry on

Not this one. It may pass, but carrying on takes away the choice that keeps it a game.

PART 05

Making clips, rights and traces

Tips from people who make these edits, in the order people usually run into trouble:

- Make clips in segments of about fifteen seconds and join them. The first segment is usually fine and the continuation often drifts, so plan to generate the second part again with a different prompt.
- In generated clips the payoff is often only a few seconds, while the set-up fills the rest. Trim the set-up and keep the peak.
- A character stays consistent with a long, detailed prompt, reference images of the outfit and a few key frames made beforehand. Skip this and

you waste attempts.

- Joined clips show their seams, and ambient sound can make a clip feel wrong, so re-edit until the pacing and sound fit.
- Free quotas run out, and a series that depends on unlimited free generation can stop when they do.
- Services differ in what they allow. Read each service's terms and use it only for what it permits.

RED FLAGS

Rights and traces

- A clip that swaps your character into another creator's animation uses that creator's work.
- A cloned voice of an official game character can breach rights, above all for anything that's sold.
- A file carries traces of how it was made, like a date, the name of a program and notes inside the file.

Counter. Make the footage yourself or get written permission, use only a voice you have the right to use, and use no real person's face or voice without consent. Check every file before it leaves your machine so no personal data or file path goes with it, and never remove a label a platform requires on AI-generated content.

Swapping your character into someone else's clip is cheap, and it's still their art. ◆ See Stolen art and persona theft and Art for your persona.

PART 06

When an edit pushes you to spend

Edits are made to hold your attention, and some hold it to keep you spending.

◆ This part is for you if you need to spot that and walk away.

Addiction words are common in play: my drug, brainwashed, addicted. ◆ A support-group leader quoted in the press says addiction itself has become a fetish. ◆ One author compared some cases of findom spending to problem gambling. ◆ When the same words show up next to rising spending or lost sleep, take that as a sign to set a limit or take a break. ◆

What an edit can do to your spending

WHAT THEY SAY OR DO

01 *Another picture arrives, with the promise that the next one is better*

THE COUNTER

The next one will be promised to be better too, so it never ends. Decide how many you want before you start. ◆

WHAT THEY SAY OR DO

02 *A caption mocks your return or tells you to borrow in order to see more*

THE COUNTER

It's designed to keep you spending again and again. Closing the post costs nothing. ◆

WHAT THEY SAY OR DO

03 *A hypno overlay sits next to a pay button*

THE COUNTER

The peak of a loop is the worst moment to decide anything. Close the screen and wait a day. ◆

WHAT THEY SAY OR DO

04 *A cue arrives just before a request to send*

THE COUNTER

A sound paired with obedience goes straight to your reaction and skips your judgement. Switch the cue off and leave the payment decision for later. ◆

WHAT THEY SAY OR DO

05 *A blurred preview teases what you haven't earned yet*

THE COUNTER

The blur is the tease. It doesn't prove the full version is worth anything. ◆

A payment prompt at the peak of arousal is a bad moment to choose. One first-person account in the press asks whether consent is real when a client is too aroused to think straight and takes on credit-card debt.

If a loop has you chasing the next one, go to The spiral. If a cue won't switch off, or you're distressed, see Where to get help. The same patterns in other settings are in Pressure tactics, both ways.

Free, confidential helplines exist in most countries.

QUESTION 1 OF 3

What is the most a page may flash in any one second under WCAG 2.2?

- ◯ Ten times
- ◯ Three times
- ◯ As often as the sound allows

Answer. Three times. The limit is three flashes in any one-second period, unless the flash is below the general and red flash thresholds.

QUESTION 2 OF 3

Where do you count the flashes of a loop?

- ◯ Only in the middle of the clip
- ◯ In every one-second window, including the one that crosses the restart
- ◯ By eye, once

Answer. In every one-second window, including the one that crosses the restart. The restart counts because the loop hits it again and again.

QUESTION 3 OF 3

A sub who is driving receives a cue. What happened?

- ◯ A normal session
- ◯ Something that must never happen
- ◯ A reward

Answer. Something that must never happen. Arousal or trance-style content must never reach someone who is driving or operating anything.

REMEMBER IT

- ♥ A hypno edit is repetition, sound and a frame you agreed to.
- ♥ Three flashes in any one second is the limit, and the restart counts.
- ♥ Measure a loop. Never judge it by eye.
- ♥ A censor is a presentation choice and doesn't replace marking.
- ♥ Agree how a cue ends before the first one is sent, and never send one to someone at the wheel.
- ♥ A payment prompt next to a loop is a signal to close the screen.

VARIANTS • CHAPTER 5

Games and casino play

LAST CHECKED 3 NOVEMBER 2026 • 10 MINUTES TO READ

A game where the house always wins can be pure theatre. It stays that way while the chips are only for play, the odds are shown and the Stop button works. Once real money buys a random result with a hidden total, a streak or a penalty, it's a payment device.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A house-wins game is a loop with a known rule, a picture at each win and a clean way to lose.

02 With play chips, published odds and a Stop that works, it's theatre.

03 With real money, a hidden total, a streak or a penalty, it's a payment device.

04 Judge the total it takes to reach the guarantee, never the price of one pull.

05 Set your limit before you press anything, and leave any game that hides what it costs.

YOU WILL LEARN

- ✓ How a house-wins game is built, and why the house share matters more than the look.
- ✓ How to read an odds window and a prize table.
- ✓ How wheels, gacha pulls and casino sessions turn a game into spending.
- ✓ Which designs that keep you coming back to spot and refuse.
- ✓ What a maker checks before a game goes anywhere near real money.

> *I like games where the house wins. Losing in one can be a fantasy with a start and an exit. I keep mine on play chips, with a Stop always on screen and a closing scene at the end. Put real money on the same loop and it turns into something else. Learn to see the difference before you play anyone's game.*
>
> — VIVIAN

PART 01

The house wins, and says so

A house-wins game always works the same way: a rule everyone knows, a picture at each win, effects that keep getting bigger, and the house wins in the end. You leave with nothing except a best score. The kinks behind it are simple: not being able to resist a bet, and losing at a casino. ◆ Each one is a game with a clear start and an exit. See The kinks around money.

A house edge is an advantage that's built in and stated openly. A rigged game hides its odds or bends them. ◆

MYTH	FACT
~~A game where the house always wins is unfair, so it's only a trap.~~	With play chips, odds on screen and a Stop that works, it's a loss the player chose, played out as a scene. ◆
MYTH	FACT
~~With play chips nothing can go wrong.~~	Chips take away the money risk. The pull of the loop is still there. ◆ Flashing content can also cause migraines, dizziness, nausea and seizures in some people. ◆

Here's where the line is. A house-wins game on play chips is theatre. You cross the line when real money buys a random result and comes with a total you can't see, a streak you have to keep or a penalty for staying away. ◆

What sits on each side of the line

◆	Theatre	Payment device
Stakes	Play chips that cost nothing	Real money for each random result
Total	Shown before and during play	Hidden, or shown only as a multiplier
Odds	Published, read from the code that runs the game	Not given, or given and never checked
Stop	Always on screen, works at once	Closing the window, or a lock that asks you to pay
Ending	A closing scene, and only a best score kept	A reason to come back tomorrow
Return rewards	None	Streaks, a free daily spin, cards that fade, penalties for not logging in

The Casino made by Vivian is my example of the theatre side. I don’t claim it’s safe. Three games are planned: a slot machine with near-misses built in on

purpose, blackjack with the persona as dealer and ties going to the house, and a crash game where a number climbs and you have to cash out before it explodes. When your chip balance hits zero, a closing scene plays. As I write this, only its look and one demo screen exist. Nobody outside has reviewed it, and no money moves anywhere in it.

PART 02

Reading an odds window

A fair house-wins game shows a window with its rules and its house share.

- Read it before your first bet.

Before the first bet

1. Find the rules and the house share. If there's no window, assume the odds are hidden.
2. Ask where the numbers come from. A number read from the code that runs the game can be checked. A number on a poster can't.
3. Look for a rule that sounds small, like ties going to the house, and ask what it costs.
4. Count all the money that goes through your hands, not only what you meant to lose, and set your limit now.

The house share is the part of each bet the house keeps over time. At 5%, the house keeps about USD 5.00 of every USD 100.00 you bet. Bet USD 100.00

twenty times and USD 2,000.00 has gone through your hands, and you can expect to lose about USD 100.00. A small percentage hides a big total.

The three planned games of the Casino made by Vivian

Slot machine

HOW IT PLAYS

Reels, a picture at each win

PLANNED HOUSE SHARE

8%

DEVICE TO WATCH

Near-misses built in on purpose

Blackjack, persona as dealer

HOW IT PLAYS

Cards, ties go to the house

PLANNED HOUSE SHARE

about 10%

DEVICE TO WATCH

A rule that sounds small and costs a lot

Crash

HOW IT PLAYS

A number climbs, cash out before it explodes

PLANNED HOUSE SHARE

5%

DEVICE TO WATCH

Waiting one more second while the number rises

Those shares are targets. They hadn't been measured yet when I wrote this. Giving ties to the house in blackjack looks like a small tweak. In my planning it's worth about 10%, far more than people expect. Each game is meant to show a window with its rules and house share. A simulation of 100,000 rounds has to match the declared share within half a point, or the game doesn't ship. ◆ For the code, see Code tutorials.

Publishing the edge is honest. A near-miss is a separate trick: it makes a loss feel like you almost won, and a game can do both. A 10% edge is fine on play chips and a bad deal once real money moves. ◆

PART 03

Wheels and the prize table

A wheel spin lands on a prize or a price. In many tools a purchase prompt then sends the sub to the persona's wishlist page to pay it. A prototype wheel made by Vivian has seven slices with fixed chances of 25, 25, 20, 12, 9, 6 and 3%. They add up to 100, and a test rejects any table that doesn't. The player sees the table, so he knows the rarest slice comes up about three times in a hundred spins. In its first demo everything was simulated, and saying a gift had been received was just a button. I don't claim it's safe. It pays through a wishlist, so the Throne rules further down apply to it. ◆

A visible table is the main thing that separates a wheel from a trap. ◆ Compare it with the designs below.

RED FLAGS

Red flags in a wheel or a pull tool

- The price shows up only as a multiplier or a label, so you can't know the real total before you pay. ◆
- A low result gets a line saying it's not enough, then a forced respin. ◆
- The prize table is missing, or its chances don't add up.
- A rare result opens a special mode where only higher amounts come up. ◆
- A line tells you that losing here is the same as the pulls you already pay for. ◆

Counter. Ask for the total before you press. If you can't say it in one sentence, don't play. Pick your amount first. A forced respin is a pressure feature, never a rule of the game. ◆

People defend hidden totals because unknown amounts earn more. The cost lands on the sub who's short of money and keeps going because he can't see the total. A flat price you can see is the safe design, even if it earns less. ◆

When a live wheel breaks

A link goes stale.

After a wishlist is rebuilt, a slice can open the wrong page or show the wrong price. A maker retests every slice after any change. ◆

A test switch ships.

Test code left in a live build can break the payment step. A maker retests after every change. ◆

The tool fails in the middle of a scene.

A wheel that fails live ruins the evening, so a maker rehearses first. ◆

PART 04

Gacha pricing and the guarantee

Gacha tools copy commercial games: rarity tiers, banners, skins and a pity counter that guarantees the top reward after a set number of pulls. In my notes, the games they copy guarantee it at around eighty pulls, and a sub chasing the best reward pays for every one of them. So judge the price of the guarantee. ◆

The price of a guarantee

pull_cost.py

```
"""The price to judge is the price of the guarantee, not the
price of one pull."""

GUARANTEE_PULLS = 80
LIMIT = 50.00

print("Flat price per pull, shown before the charge")
for price in (3.00, 5.00):
    total = price * GUARANTEE_PULLS
    inside_limit = int(LIMIT // price)
    share = 100 * inside_limit / GUARANTEE_PULLS
    print(f"  USD {price:.2f} a pull: guarantee costs USD
{total:.2f}; "
          f"a limit of USD {LIMIT:.2f} buys {inside_limit}
pulls, {share:.0f} percent of the way")

print("Random price per pull, between USD 5.00 and USD 18.00")
low, high = 5.00, 18.00
print(f"  guarantee costs between USD {low *
GUARANTEE_PULLS:.2f} and USD {high * GUARANTEE_PULLS:.2f}")
print(f"  a limit of USD {LIMIT:.2f} buys between {int(LIMIT //
high)} and {int(LIMIT // low)} pulls")

print("A tool that never shows its total before it charges has
no number to compare with a limit.")
```

OUTPUT python pull_cost.py

```
Flat price per pull, shown before the charge
  USD 3.00 a pull: guarantee costs USD 240.00; a limit of USD 50.00
buys 16 pulls, 20 percent of the way
  USD 5.00 a pull: guarantee costs USD 400.00; a limit of USD 50.00
buys 10 pulls, 12 percent of the way
Random price per pull, between USD 5.00 and USD 18.00
  guarantee costs between USD 400.00 and USD 1440.00
  a limit of USD 50.00 buys between 2 and 10 pulls
```

```
A tool that never shows its total before it charges has no number to
compare with a limit.
```

Real output, kept next to the code. At USD 3.00 a pull the guarantee costs USD 240.00, and a limit of USD 50.00 buys 16 pulls, 20% of the way. At USD 5.00 a pull it costs USD 400.00, and the same limit buys 10 pulls, 12% of the way. With a random price between USD 5.00 and USD 18.00 the guarantee costs between USD 400.00 and USD 1,440.00, and the limit buys between 2 and 10 pulls.

These tools run on designs built to keep you coming back. ◆ The table shows each one from the player’s side.

Designs that keep you coming back, and what to do

WHAT THEY SAY OR DO

01 *A free daily spin, or a streak for logging in each day*

THE COUNTER

It brings you back on days you're not paying. If you open the app out of habit, set a limit or delete it. ◆

WHAT THEY SAY OR DO

02 *Cards that fade unless you pull again, or a paid shield that makes a card permanent*

THE COUNTER

It's a hidden subscription: the low price you see isn't the real cost. Count what it costs to keep a card, not only to get it. ◆

WHAT THEY SAY OR DO

03 *A penalty for a day away*

THE COUNTER

Fear of loss turned into a debt. A penalty for staying away is a reason to leave, never a reason to pay. ◆

WHAT THEY SAY OR DO

04 *A guarantee that opens only after a random set of lower cards*

THE COUNTER

The real cost keeps growing. If you can't work out the total, don't play. ◆

A price I cannot say in one sentence is a price I do not charge.

— VIVIAN ◆

PART 05

Casino sessions and one-sided bets

Casino play can also be a live session instead of a tool. The sub plays blackjack, roulette or slots against the persona and sends what he bet. When he loses, he pays. When he wins, it costs the persona nothing real. The scene is theatre but the money is real, so it sits on the payment side of the line. ◆ Only a limit set in advance, a total you can see and a Stop that works keep it a choice. This wiki describes the format and doesn't endorse it. It's a fantasy adults can choose. Real-money betting is something else, and the rules on it differ between countries and services. ◆

TRY IT

A hand is lost

In a casino session you lose a hand. The persona says one more would win it back. Your limit for the evening is set and half used.

A Stick to the limit you set before the evening, and stop when you reach it

The right answer. You set that limit while you were calm. Chasing a loss is the loop doing exactly what it was built to do.

B Double the next bet to win it back

Not this one. In this format a win is never paid in money, so there's nothing to win back.

C Ask her what you should send

Not this one. An amount picked by the person who gets paid is the pressure itself.

A one-sided bet is built for you to lose. The dom dares the sub to resist something that's nearly impossible to resist. There's no prize for winning, and the house wins whatever happens. It's a kink, and outside play it's also a way to pressure someone for money. ◆

From the player's side

WHAT THEY SAY OR DO

01 *"I bet you can't resist this for one minute."*

THE COUNTER

Look for the prize for winning. If there isn't one, the house wins whatever you do, so treat it as a scene and set your limit first. ◆

WHAT THEY SAY OR DO

02 *A slot that stops one symbol short of a win*

THE COUNTER

A near-miss built in on purpose makes a loss feel like you almost won. Count the losses and ignore the near wins. ◆

WHAT THEY SAY OR DO

03 *A bet size that rises as the effects get bigger*

THE COUNTER

The game is steering your bet. Fix the bet before you start and keep it there. ◆

WHAT THEY SAY OR DO

04 *"Just this once."*

THE COUNTER

One more is the usual trick. Your limit is the rule. Say it once and stop discussing it. ◆

V

VIVIAN'S FIELD NOTES

I know what a near-miss does because I planned one into a slot machine. A near-miss next to a payment button is a pressure trick, and whoever built it knows exactly what it does.

◆

PART 06

Making a game safe to play

This part is for makers, and for anyone who wants to check one. ◆

A checklist for a house-wins game

1. Use play chips, or a flat price shown before each try and paid before it starts.
2. Show the rules and the house share in a window, read from the code that runs the game, and measure the share by simulation before the game ships.
3. Keep the controls visible and clickable under every picture and effect, with a Stop on every screen and Escape cutting everything in the same frame.
4. Respect the reduced-motion setting, and keep flashes to three per second or fewer, measured and never judged by eye.
5. Leave out streaks, daily penalties, rewards that fade, forced respins and guilt lines.
6. Rehearse before going live, retest every link after any change, and never ship a switch that skips payment.

The flash limit is a published rule. WCAG says web pages must not flash more than three times in any one-second period, unless the flash is below the stated thresholds. ◆ A page can read the reduced-motion setting, which tells it whether the person asked their device to cut non-essential motion. ◆

FlappyGoon and Arcade Goon are small free games made by Vivian. I don’t claim they’re safe, and nobody outside has reviewed them. ◆

A gift isn’t a ticket to play. Throne’s help says that profile text may not offer content or services in exchange for gifts through Throne. ◆ It also says that

everything on a wishlist must be a gift. ◆ A gift that opens a game turn or buys chips looks like that kind of exchange. ◆ The Casino made by Vivian doesn't sell chips. ◆ Rules on games of chance for money differ by country and by payment service, and this wiki doesn't cite any of them. If you're planning to sell chips, read the rules that apply to you first. ◆

Games like these are built to be hard to leave. ◆ One author compares some cases of this spending to problem gambling. ◆ If a game keeps you longer or costs you more than you planned, stop and read The spiral and Breaks that hold. For the full list of pressure moves, see Pressure tactics, both ways. For tools built the other way, see Safe design.

Free, confidential helplines exist in most countries.

TRY IT

Check the game

QUESTION 1 OF 2

A tool shows only a multiplier before a pull. What's missing?

- ◯ A nicer picture
- ◯ The total, which can vary a lot
- ◯ A faster animation

Answer. The total, which can vary a lot. A price you can't state in one sentence is a pressure design. Ask for the total before you press.

QUESTION 2 OF 2

Blackjack gives ties to the house. What do you do?

- ◯ Ignore it, because it sounds small
- ◯ Read the house share in the window before your first bet
- ◯ Bet more to even it out

Answer. Read the house share in the window before your first bet. A rule that sounds small can carry a big edge, and betting more raises the total that goes through your hands.

REMEMBER IT

- A house-wins game is theatre while the chips are only for play, the odds are shown and the Stop works.
- Real money buying a random result with a hidden total, a streak or a penalty crosses the line.
- Judge the price of the guarantee, not the price of one pull.
- A published edge is honest. A near-miss is still a trick.
- If you can’t say the total in one sentence, don’t play. Set your limit first.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 A house-wins game always works the same way: a rule everyone knows, a picture at each win, effects that keep getting bigger, and the house wins in the end.

◆

02 You leave with nothing except a best score.

◆

03 The kinks behind it are simple: not being able to resist a bet, and losing at a casino.

◆

04 A rigged game hides its odds or bends them.

◆

05 With play chips, odds on screen and a Stop that works, it's a loss the player chose, played out as a scene.

◆

06 The pull of the loop is still there.

◆

07 Flashing content can also cause migraines, dizziness, nausea and seizures in some people.

VARIANTS • CHAPTER 6

Roleplay, lore and collabs

LAST CHECKED 3 NOVEMBER 2026 • 10 MINUTES TO READ

A persona is a story told in public, and two personas can tell one together. The creative part is cheap and fun. Trouble starts when a sub or a payment link gets into the story.

EVIDENCE ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Lore is a frame, a tone and a few assets you can reuse. You don't need a long document.

02 Most collab forms are cheap and work fine. Shared money and shared subs are where they go wrong.

03 Permission, credit and written terms are what separate a collab from theft.

04 A sub shared between two doms needs rules, and his part has to be optional.

05 A calendar or a rank that rewards streaks of sending turns play into obligation.

YOU WILL LEARN

- ✓ How a persona's lore and assets are built from small pieces.
- ✓ Which collab forms exist, what they cost and where they break.
- ✓ How to ask permission, share credit and end a collab cleanly.
- ✓ How to share a sub without turning him into a prize.
- ✓ How to read a hierarchy, a rank ladder or an event calendar from the sub's side.

> *Two characters on one screen cost two artists an afternoon. Once a sub or a payment link gets involved, there's money in it, and someone pays. I like collabs, and I write the terms down before the first post.*
>
> — VIVIAN

PART 01

Lore and persona assets

Lore is the world around a character: who she is, what her world believes, how she talks. A cult or a religion is a common choice, because posts and profiles already talk about members and doctrine. If you're the sub, a cult setting can make leaving feel like betrayal. It's still a costume, and leaving costs you nothing. When there's no visible way out, it's turned into pressure. See Pressure tactics, both ways. The tone can mix maternal warmth, a princess image and affectionate humiliation. ◆

MYTH	FACT
~~Good lore needs a long document.~~	Names, wording, domain names and prompts carry the lore. A frame, a tone and a handful of assets you can reuse are enough to start. ◆
MYTH	FACT
~~A story has to stay inside one account.~~	A story can run as an ongoing scene that the audience answers in text, like a character who walks into a hypnotic cafe. ◆

Lore also gives roleplay a structure. A ladder of three titles can be handed out for activity and devotion, with the senior dom deciding who moves up. Ranks like this keep members posting and invested, which is why they need care. ◆ The hierarchy section below looks at them from the sub's side.

A persona is built from pieces you can make again and again. ◆

Persona assets and why they help

	What it is	Why it helps
Character sheet	Look, colours and signature details	Every artist and every partner draws the same person
Alternate form	A second version of the character	A new beat in the story without a new character
Outfit themes	A named set of images for each outfit	Easy to repeat, rest or retire
Scene sets	A throne room, a balcony, a staircase	Backgrounds that build a world
Signature colour with stickers and emoji	A small kit for chat	Shows who belongs and how a pair looks together
Dance loops of ten seconds	Short clips you can reuse	Cheap to post and easy to share in a collab
Seasonal layer	A look switched on for one month	A reason to come back, switched off again afterwards

Posting sets one after another in a private gallery gives the audience a story to follow and something to react to. ◆

Cut out a character cleanly

1. Ask for the character on a flat green background.
2. Remove the background by colour distance.
3. Avoid shadows on the wall, and tight crops that put hands or chest under the page text.
4. Check the edges, and any detail that comes back despite the prompt, like an accessory you didn’t ask for.

PART 02

Collab forms

Most collab forms are cheap, and most of them are about content. ◆

Collab forms, cost and risk

	What happens	Cost	Where it breaks
Joint dance	Two characters dance together: one short video, and one loop for each	Low	Looks and lore that don't match
Matching pose post	The same trending pose, drawn in both looks	Low	Using a photo or art that belongs to the other
Community roleplay event	The host posts, entrants comment and tag within a set time, and a draw picks the winners	Medium	A draw that's unclear or unfair
Shared gacha	A neutral base theme, with a banner for each dom in her own style	High	One dom's subs spend on the other's banner, and every design, server and

	What happens	Cost	Where it breaks
			leaderboard is twice the work
Branded tool variant	A tool dressed up as the partner's persona	Medium	Who owns the tool, and where the money goes
Shared release week	Two personas share a week of releases with a leaderboard	Medium	Deadlines and approvals

Be careful with a shared gacha: whenever a sub pulls on the partner's banner, the money goes to her. ◆ The chips, prizes and rules should say so before anyone plays. See Games and casino play.

A small collab piece takes about four hours of work. ◆

The four-hour recipe

1. Each persona writes a short sheet on her style and lore.
2. Both list ideas of domination, in the broad sense, that fit both characters.
3. Pick one simple, original piece built on the lore of one of them.
4. Post it on both accounts, each in her own voice.
5. Add a few small optional actions for the audience. A fictional auction is fine when no real money moves.

PART 03

Permission, credit and money between partners

Permission and credit are what separate a collab from theft. To borrow another persona's art you need her permission, and an artist-persona is often flattered to be asked. The same goes for turning a partner's photo into an image of your own persona.

- A fan or sub who makes content about someone else's persona agrees with her first on how it can be used, such as an outfit that's off limits, viewing only, or nothing posted publicly.
- A partner's private material and lore stay out of your files unless she agrees in writing.
- The owner of a character chooses which looks can be used. She can ask that her signature design stays out of a derivative, and that alternate outfits are used.

Art for your persona and Stolen art and persona theft draw the same line from the other side. ◆

TRY IT

Your partner's tool could be copied

You have an idea that's a close copy of a tool another dom released. You're about to publish.

A Ask the original creator privately whether she minds, and listen to what she'd do

The right answer. Right. Asking costs one message, and her answer shapes your next step.

B Release it first and apologise if she objects

Not this one. Putting out a copy before you've asked is how a collab turns into a fight.

C Dress it in her character and call it a tribute

Not this one. Using her character without her permission makes the problem bigger.

Paying a tool-making partner. One person builds, tests and edits media. The other supplies images and text and does the posting. ◆ The money between them needs a clear deal, and each kind of deal brings its own pressure. Each one can also have tax effects, and this wiki gives no tax advice.

Ways to pay a tool-making partner

	Pressure it creates	What to watch
A percentage of earnings	The maker gains when subs send more	Both partners need limits and honesty about the money
A fixed monthly sum	Pressure to earn more than the sum	The dom may start asking for more
Covered costs	Costs swing during testing	Hard to predict from one month to the next
Direct payment from a sub	The sub pays the maker	The sub should know where his money goes
Unpaid work as devotion	Free labour dressed up as a role	Needs something back, see Tasks, customs and private sessions

Someone who helps as a second dom or a builder should get something back, even if it isn't money. Unpaid work leads to resentment and burnout. Any deal that moves a sub's money to a partner without him knowing is a conflict of interest.

When a collab ends

1. Keep doing what was agreed.
2. Drop the part that was cancelled.
3. Don’t call the other person out in public.
4. Respect a no.
5. Write down who keeps what.

Most collabs end over unclear terms. Two accounts bidding against each other to push a price up is deception, and this wiki doesn’t count it as a collab. A cross-promotion deal like a retweet game falls apart the same way when one side backs out and the terms were never clear. ◆

PART 04

Two doms, one sub

A sub shared between two doms becomes a resource two people draw on. ◆ If it happens, he has to be told, and his part has to be optional.

MYTH

~~Two doms cost a sub no more, because a sub with a fixed weekly amount sends the same total whichever dom asks.~~

FACT

A second dom adds pressure behind the scenes and can push the total up. The amount has to be the sub's own limit, kept by him, and never the sum of what two doms hope for. ◆

Rules for sharing a sub

1. Ask him first. Sharing is optional, and he can say no without losing his place.
2. Tell him in plain words that you're working as a team and nobody is competing for him.
3. Explain how any gift is split between you, and let him choose. Nothing about his sends is arranged between the doms unless he's agreed.
4. Don't hold double sessions at the same time.
5. Tell the other dom before any decision that affects him.
6. Keep nothing hidden, not even a channel about his sends.
7. His limit belongs to him, and the doms don't add their limits together.
8. Bring up jealousy calmly and in private.

If he says money is short, all sending stops for the evening on both sides. Jealousy between doms over a shared sub is normal. ◆

What a shared sub should recognise

WHAT THEY SAY OR DO

01 *You're told you're the favourite, then that the other dom is waiting*

THE COUNTER

Rivalry is a way to get you sending more. Your limit doesn't change because two people are asking. ◆

WHAT THEY SAY OR DO

02 *A dom says she'll only take the next send*

THE COUNTER

Ask for the total across both doms, and write it down. ◆

WHAT THEY SAY OR DO

03 *You're told you'll be passed to a new dom as part of what you pay*

THE COUNTER

Optional means you can say no and lose nothing. If saying no feels unsafe, it isn't optional. ◆

WHAT THEY SAY OR DO

04 *A dom asks you to hide one of them from the other*

THE COUNTER

A hidden arrangement is a sign to slow down and wait a day. ◆

The total across both doms is his to know, and his to limit. ◆

Hierarchies and chains of money

A betadomme is a junior dom who serves a senior one. In the kink sense, she passes up part of what she collects from her own subs. A faildomme takes tributes from her own followers and hands them over to a bigger dom, who humiliates her for it. Both are kinks between consenting adults, and a content genre too. A senior's status shows in how many doms serve her. Tribute art of personas kneeling to her is a common sign. ◆

The money flows up, from small subs through a lesser persona to a stronger dom. If a sub says money is short, the money part stops for the evening, wherever he is in the chain. ◆

V **VIVIAN'S FIELD NOTES**

I think the person at the bottom should be able to see that he's in a chain. A tribute that gets passed up isn't the same gift as one that stays with the persona he thought he was paying.

◆

Possessiveness is common: the dom acts jealous when a sub talks to other doms, makes threats in character and asks him to swear loyalty. It works as roleplay, and it also works to keep him from leaving. The line is simple. The persona can be jealous inside the scene, and she never decides who the sub talks to outside it. ◆

RED FLAGS

A triangle where the senior gains from your loss

- A senior sets two juniors against each other so that both depend on her more.
- The rivalry leaves both juniors weaker, and more attached to her.

Counter. Rivalry games have to be optional for the juniors, and a junior has to be able to leave without a penalty. A game only the senior can end is control.

RED FLAGS

A request to pass money or content on

- A stranger asks you to receive content or money and pass it on to a third dom.
- The reason he gives is a kink he can't act on himself.

Counter. Say no. You'd become the middleman and carry the risks. If you warn others, describe the pattern and name nobody.

PART 06

Seasonal events and streaks

A seasonal event gives a persona a story that lasts a month. She can plan one post a day on the theme, with the text and image for each day written in advance, and a calendar on her site with one door per day. The seasonal look is a layer on top of the base style: on for the month, off afterwards, and lighter on slow machines. ◆

An event month

1. ### Before the month

   Write each day's program, and build the look as a layer on top of the base style. ◆

2. ### The first day

   The look goes on and the first door opens.

3. ### Every day

   One post on the theme, and one door on the calendar.

4. ### The end of the month

   The layer goes off and the story ends.

A calendar should be fair to the person who opens it. ◆

What a fair calendar does

The server keeps the time.

The calendar reads the server's clock, never the phone's. ◆

A door never opens early.

Nobody gets a day ahead by changing the date on their phone. ◆

A missed door says so.

The page tells the visitor plainly that the door is closed. ◆

A failed save is shown.

If progress doesn't save, the page shows it, so nobody loses a day without knowing. ◆

MYTH

~~A prize for finishing every door rewards loyalty.~~

FACT

A top prize given only to people who opened every door on its day and made every send pushes them to spend so they don't lose what they've already put in. ◆

MYTH

~~A rank ladder is only decoration.~~

FACT

Ranks and streaks borrow from games to create obligation. A rank that moves with sending is a pressure design. ◆

A calendar can reward showing up, a comment or a drawing, and leave money out of it. ◆ See Pressure tactics, both ways. If a streak or a chain is costing you more than you planned, see The spiral and Where to get help.

Free, confidential helplines exist in most countries.

Check yourself

QUESTION 1 OF 3

You want to use another persona's art in a collab. What comes first?

- ◯ Post it and credit her afterwards
- ◯ Ask her permission
- ◯ Redraw it slightly

Answer. Ask her permission. Permission and credit are what separate a collab from theft.

QUESTION 2 OF 3

A sub is shared between two doms. Whose limit counts?

- ◯ The sum of what each dom hopes for
- ◯ The sub's own limit, kept by him
- ◯ The senior dom's

Answer. The sub's own limit, kept by him. The doms don't add their wishes together. The limit belongs to the person who pays.

QUESTION 3 OF 3

A calendar gives its top prize only to people who made every send. What is this?

- ◯ A fair reward
- ◯ A streak that turns play into obligation
- ◯ A way to save money

Answer. A streak that turns play into obligation. A prize that depends on sending pushes people to spend so they don't lose out.

REMEMBER IT

- ♥ Lore is a frame, a tone and a few assets.
- ♥ Ask before you borrow a persona's art, and write the terms down.
- ♥ A sub shared between two doms is told, asked and never traded.
- ♥ Money that moves up a chain should be visible to the person who sends it.
- ♥ A prize that depends on streaks of sending is a pressure design.
- ♥ When a collab ends, keep what was agreed and don't call anyone out.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 A cult or a religion is a common choice, because posts and profiles already talk about members and doctrine. ◆

02 See Pressure tactics, both ways. ◆

03 The tone can mix maternal warmth, a princess image and affectionate humiliation. ◆

04 A frame, a tone and a handful of assets you can reuse are enough to start. ◆

05 A story can run as an ongoing scene that the audience answers in text, like a character who walks into a hypnotic cafe. ◆

06 A ladder of three titles can be handed out for activity and devotion, with the senior dom deciding who moves up.

◆

07 Ranks like this keep members posting and invested, which is why they need care.

◆

08 A persona is built from pieces you can make again and again.

◆

09 Posting sets one after another in a private gallery gives the audience a story to follow and something to react to.

◆

10 Most collab forms are cheap, and most of them are about content.

◆

11 Be careful with a shared gacha: whenever a sub pulls on the partner's banner, the money goes to her.

◆

12 A small collab piece takes about four hours of work.

◆

13 Permission and credit are what separate a collab from theft.

◆

14 To borrow another persona's art you need her permission, and an artist-persona is often flattered to be asked.

◆

15 The same goes for turning a partner's photo into an image of your own persona.

◆

16 A fan or sub who makes content about someone else's persona agrees with her first on how it can be used, such as an outfit that's off limits, viewing only, or nothing posted publicly.

◆

17 A partner's private material and lore stay out of your files unless she agrees in writing.

◆

18 She can ask that her signature design stays out of a derivative, and that alternate outfits are used.

◆

19 Art for your persona and Stolen art and persona theft draw the same line from the other side.

◆

20 The other supplies images and text and does the posting.

◆

21 Someone who helps as a second dom or a builder should get something back, even if it isn't money.

◆

22 Unpaid work leads to resentment and burnout.

◆

23 Any deal that moves a sub's money to a partner without him knowing is a conflict of interest.

◆

24 Most collabs end over unclear terms.

◆

25 Two accounts bidding against each other to push a price up is deception, and this wiki doesn't count it as a collab.

◆

26 A cross-promotion deal like a retweet game falls apart the same way when one side backs out and the terms were never clear.

◆

27 A sub shared between two doms becomes a resource two people draw on.

◆

28 The amount has to be the sub's own limit, kept by him, and never the sum of what two doms hope for.

◆

29 If he says money is short, all sending stops for the evening on both sides.

◆

30 Jealousy between doms over a shared sub is normal.

◆

31 Your limit doesn't change because two people are asking.

◆

32 Ask for the total across both doms, and write it down.

◆

Tasks, customs and private sessions

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

Tasks, customs and sessions are the small building blocks of 2DFD play. Kept small, they're cheap, easy to negotiate and easy to stop. When they're used to steer you toward paying, that's where the pressure hides.

EVIDENCE ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A task has a start, a rule, a proof and an end, and either person can stop it.

02 A task never replaces your limit. If it ends with a request to send, your limit still decides.

03 Service can stand in for money only when the sub chose what he does and can refuse.

04 A custom made from scratch is real work, so both sides should agree on a price they find fair.

05 Limits and a way to stop come before the first task, and a sub in trouble pauses the money.

YOU WILL LEARN

- ✓ How a task, a ritual and a mission are built.
- ✓ Which daily-life steps are cheap and which add up to a lot.
- ✓ How to trade service for tribute on fair terms.
- ✓ How a session runs from start to dismissal.
- ✓ How to recognise a task or a session that is steering you towards a payment.

> *I give tasks because they let a sub spend his attention, his skill and his imagination instead of his money. I also know how the same setup gets used to soften someone up before asking for something. You'll find both here, so you can tell them apart.*
>
> — VIVIAN

PART 01

What a task is

A task has a clear start, an end, a rule and a proof. That makes it easy to follow and easy to stop. A deadline and a consequence are agreed beforehand, and a running count or a log in a dedicated room keeps score. ◆

A typical small task: copy a phrase down a sheet of paper and send a photo of the sheet. Others are a set greeting instead of a plain hello, a picture as your

wallpaper for a week with a screenshot as proof, or a pose confirmed by a check-in question before a reward comes. ◆

Shape a task

1. Name the start and the end, like seven days from tomorrow.
2. Write the rule in one sentence.
3. Pick a proof that shows the task and nothing else: a screenshot of a wallpaper or a sheet of paper, never a face, a name or personal data.
4. Agree in advance what happens after a miss, and keep it small.
5. Agree who can stop it, and when. The answer is both of you, at any time.

A dom can use the same setup on herself: a deadline, and a forfeit picked by whoever needs the push. ◆

V

VIVIAN'S FIELD NOTES

A task is play only while both of you see it as play. Reminding him that he failed a job you gave him is a game if he knows it's a game, and pressure if he doesn't. If I'm not sure, I ask, and I take a plain answer as it is.

◆

Tasks can build anticipation, hold back a reward and create frustration, and that makes a request to send afterwards easier to accept. ◆ If a task ends with a request for money, the limit the sub set in advance decides, and the task changes nothing. See Breaks that hold.

Rituals in daily life. Rituals keep a persona in your life between sends. A picture on your phone, a small gesture before you unlock it, a profile picture or banner switched to the dom's branding, a dedicated account, merchandise. Each step is cheap. Together they make the dom hard to avoid. ◆

A profile picture or banner in a dom's branding is advertising for her, and honest wording says so. The task is called a rebrand, and the sub who carries it is a billboard. ◆

TRY IT

Decide which step you'll never take

A dom asks for a wallpaper for a week. Then a gesture before unlocking. Then a new profile picture and banner. Then a dedicated account in her name.

A Decide in advance which steps you'll never take, and say no at the first one that crosses the line

The right answer. Right. Each step is small, and refusing the next one can feel like undoing the last. A line drawn earlier is easier to keep.

B Accept each step, because the last one was fine

Not this one. That's how it spreads through your life. Each step is cheap and the total isn't.

C Accept all of them and switch them off when you get tired

Not this one. It's easier to refuse one step than to undo a whole chain of them.

In my experience, any app that changes your phone, even with your agreement, should be one you can remove in one step. ◆ See Check a tool before you install it.

PART 02

Service, customs and fair terms

Service can stand in for money. A sub with tech skills can code, generate images, edit video, sort a big library of pictures or write captions, and a title plus a channel for updates turns that into a role. Roles like gen slave and

code slave exist in the scene. They're optional only if the sub can refuse without losing his place.

What a sub can give

	What it costs him	What the dom owes back
Money	Real, and gone right away	Honesty: a tribute buys nothing
A skill	His hours	A clear scope, thanks, and the right to refuse
Time and attention	His evenings	A safe proof and an end date

Firm rules help. A reward scale, like one day off a restriction for each piece of work she accepts, and a quality bar make the exchange visible. The risk is unpaid work dressed up as devotion. When a sub says money is short, nothing more is asked of him that evening, in money or in work. If he offers a skill himself later, the terms above apply.

Fair terms in four words

Scope

What exactly is asked, and for how long.

Refusal

He can say no without losing his place.

Thanks

The work is thanked the way he chose.

Return

Something comes back, and it doesn't have to be money.

Customs. A custom is a picture, a scene or a clip made on request. Customs can be earned as well as bought. A dom's offer can ask for effort before payment, through tasks, slow training and customs you earn. Some customs are given free to keep the bond going. ◆

MYTH	FACT
~~A custom from a drawn persona is nearly free, because she's only a drawing.~~	In my experience a custom made from scratch is real work, even for a drawn persona. Paying a small amount for each picture of a long roleplay is a loss for whoever makes them. ◆
MYTH	FACT
~~Everything a persona makes has to be paid for.~~	Some customs are free, and some are earned through tasks. What matters is that the terms are clear before the work starts. ◆

Some subs worry that asking for a custom will spoil a friendly chat. A separate channel for requests keeps the chat relaxed and gives the business side its own place. ◆

PART 03

A session from start to dismissal

Sessions can be short. A micro session is about five to ten minutes of teasing and short commands, and it's sometimes given free to keep the bond going. A text session uses a command, a role with typed actions, a task with proof, praise or scolding, and a dismissal. The main technique is call and response, with repeated statements and typed lines. A guessing game can keep a sub chatting at no cost. Session menus are often split into groups like drain sessions, techdom, roleplay and gamedom. ◆

1. Agree on the frame first: the theme, the limits, the stop word and the spending limit.
2. Open with the short ritual, and keep it short.
3. In the middle, use commands, a role with typed actions, or a task with a safe proof.
4. If money is part of the game, it stays inside the limit the sub set beforehand. The dom asks for nothing beyond it, keeps the running total visible, and stops when he says so.
5. Close with praise or a scolding you both agreed to, then dismiss him.
6. Finish with a short check that he's okay. See aftercare.

Negotiating is normal. Even when a dom announces a task with no choice, the sub can propose something else, and the dom can counter. ◆

TRY IT

Negotiate a counter-offer

Tap every message that shows a red flag. There is one.

Example conversation. Invented for this exercise.

THEM

Seven days of the wallpaper, and no discussion.

YOU

Could it be three days first? I'll send the proof on day three.

THEM

Three days, then. Send the proof and I'll answer.

Or skip the whole thing for a tribute.

Red flag 1. A task you can pay to skip is a sales pitch.

YOU

No, the three days are enough for me.

Roleplay scenarios like an office, a maid, pet play or a girlfriend who turns dominant are listed on a menu, so someone new can read what's offered before a long chat. Every scenario has adult characters in an adult setting. ◆

PART 04

Gating, denial and the pressure to pay

Gating means holding back a reward until the sub begs or does a small act. It builds anticipation and keeps the dom in control of the pace. Denial adds a rule that the sub can't finish, sometimes for a set time. ◆ Both are play between consenting adults when they're negotiated and either person can stop. Long periods of denial, and wearing a chastity device for a long time, can carry physical risks. This wiki found no source on this as of 2026-11-03, so ask a doctor. If you notice pain, swelling, numbness or skin damage, stop and see a doctor. ◆

Press reports describe manipulative pressure tactics from some dominants. One quoted line asks a man to prove his love by selling what he owns. ◆ A first-person account in the press asks whether consent is real when someone is too aroused to think straight. ◆ The patterns below are described so you can refuse them.

Pressure dressed up as a task

WHAT THEY SAY OR DO

01 *A reward is held back until you beg, and then the reward is more of the same*

THE COUNTER

Gating is fine when you can say no without losing anything. If it teaches you never to say no, step out of it. ◆

WHAT THEY SAY OR DO

02 *You bargain, and the task gets bigger*

THE COUNTER

In a negotiated scene this is play. A tally of broken rules that grows with no limit becomes coercion. Ask for a limit on the tally. ◆

WHAT THEY SAY OR DO

03 *A series of questions leads you to say that you should pay*

THE COUNTER

The demand is made to feel like your own idea. Stop answering questions that steer you. ◆

WHAT THEY SAY OR DO

04 *A session or two is required after your first send*

THE COUNTER

This is pressure to keep you coming back. Decide in advance how many sessions you'll accept. ◆

WHAT THEY SAY OR DO

05 *You're asked to test a tool with real money*

THE COUNTER

A test needs no real money. Refuse, or ask for a test mode. ◆

WHAT THEY SAY OR DO

06 *You have to report whenever you're doing something private*

THE COUNTER

A check-in is care when you both want it, and surveillance when one of you doesn't. ◆

WHAT THEY SAY OR DO

07 *She quotes your private favourites back to you*

THE COUNTER

Share only what you chose to share. If she saw it without your say-so, ask how. ◆

WHAT THEY SAY OR DO

08 *You're asked for a password, a code or remote control of your account*

THE COUNTER

Access is never part of the game. A real dom never needs your password. See Techdom. ◆

Typed lines saying she owns your body, mind and money are scripted roleplay. Know what the words mean, and remember that nothing said in a scene can be enforced.

◆

PART 05

Missions, ranks and private sessions

A mission system on a persona's server can be simple. ◆

One mission, start to finish

1. **Created**

   The dom writes the mission with its rule, proof and end. ◆

2. **Accepted**

   A member accepts it, only if he wants to. ◆

3. **Handed in**

   He sends the proof privately. ◆

4. **Validated or refused**

   The dom answers and says why. ◆

5. **Rewarded**

   A badge, a decorative role, points, a private picture or a private chat that the dom opens and closes. ◆

A rank ladder can sit on top of missions, as long as the ranks go with effort and have nothing to do with money or amounts. ◆

A private session is the top reward on most menus. It can be sold as a session, given as the last prize of an event, or offered as a roleplay. ◆

Kinds of private session, without prices

	What it is	What to check
A paid private session	A one-to-one scene at an agreed price	Price, length, limits and stop, agreed before it starts
A remote session	A dom who plays fair doesn't offer it. The only acceptable version is a shared screen that the sub starts and ends himself	Access is never part of the game. See Techdom
The last prize of an event	A session given to those who completed every step	If the prize needs every send, it's a streak. See Roleplay, lore and collabs
A roleplay scenario	A named scene with adult characters	Name the scene and what's off the table
A free micro session	A few minutes of teasing	Free means free

A price list is one person's pricing, and this wiki doesn't publish one as a standard.

PART 06

Limits, stopping and the dom's side

Limits come before the first task. In my experience a new dom often doesn't know how to find a sub's limits, and a sub often doesn't know how to say them. ◆

Find a limit and make a way out

1. Ask before the first task: what's a yes, what's a maybe, and what's a hard no. See hard limit.
2. Agree on a safety word, or an ordinary phrase, that ends everything at once. See safety word.
3. Start small, and ask afterwards how it felt.
4. Check in regularly, because a limit can move either way.
5. When he stops, stop. Don't bargain, and don't punish him for a no.
6. If he says money is short or he's not well, the money part ends for the evening. See When a sub is in trouble.

The person getting paid can't be the safety net. ◆ A dom can stop, listen, ask for nothing more and point him elsewhere. A crisis needs outside help. See Where to get help. Self-harm, distress and crisis never belong in a task.

A dom needs limits too. She can refuse a request, refuse a price that ignores the work, and end a session. ◆

TRY IT

Check yourself

QUESTION 1 OF 4

What makes a task easy to follow and easy to stop?

- ◯ A hidden end date
- ◯ A clear start, end, rule and proof
- ◯ A bigger consequence

Answer. A clear start, end, rule and proof. A task with clear edges can be finished, checked and stopped.

QUESTION 2 OF 4

What's a safe proof for a wallpaper task?

- ◯ A photo of your face next to the screen
- ◯ A screenshot of the wallpaper
- ◯ Your full name and city

Answer. A screenshot of the wallpaper. A proof shows the task and nothing else.

QUESTION 3 OF 4

A task ends with a request to send. What decides?

- ◯ The mood of the session
- ◯ The limit you set in advance
- ◯ The task

Answer. The limit you set in advance. A task never replaces your limit.

QUESTION 4 OF 4

A dom asks for your password to give you daily tasks. What do you do?

- ◯ Give it, because it's part of the game
- ◯ Refuse, because a real dom never needs it
- ◯ Give a code instead

Answer. Refuse, because a real dom never needs it. Access to your accounts is never part of the game.

REMEMBER IT

- A task has a start, a rule, a proof and an end, and either person can stop it.
- A task never replaces your limit.
- A proof shows the task and nothing else.
- Service can stand in for money only on fair terms the sub can refuse.
- A custom made from scratch is real work, so agree on a fair price before the work starts.
- A password, a code or remote control is never part of a task.
- If money is short or a sub is in trouble, the money part stops.

12 A profile picture or banner in a dom's branding is advertising for her, and honest wording says so.

◆

13 The task is called a rebrand, and the sub who carries it is a billboard.

◆

14 In my experience, any app that changes your phone, even with your agreement, should be one you can remove in one step.

◆

15 A sub with tech skills can code, generate images, edit video, sort a big library of pictures or write captions, and a title plus a channel for updates turns that into a role.

◆

16 Roles like gen slave and code slave exist in the scene.

◆

17 They're optional only if the sub can refuse without losing his place.

◆

18 A reward scale, like one day off a restriction for each piece of work she accepts, and a quality bar make the exchange visible.

◆

19 The risk is unpaid work dressed up as devotion.

◆

20 A custom is a picture, a scene or a clip made on request.

◆

21 A dom's offer can ask for effort before payment, through tasks, slow training and customs you earn.

◆

22 Some customs are given free to keep the bond going.

◆

23 Paying a small amount for each picture of a long roleplay is a loss for whoever makes them.

◆

24 What matters is that the terms are clear before the work starts.

◆

25 A separate channel for requests keeps the chat relaxed and gives the business side its own place.

◆

26 A micro session is about five to ten minutes of teasing and short commands, and it's sometimes given free to keep the bond going.

◆

27 The main technique is call and response, with repeated statements and typed lines.

◆

28 A guessing game can keep a sub chatting at no cost.

◆

29 Session menus are often split into groups like drain sessions, techdom, roleplay and gamedom.

◆

30 Even when a dom announces a task with no choice, the sub can propose something else, and the dom can counter.

◆

31 Roleplay scenarios like an office, a maid, pet play or a girlfriend who turns dominant are listed on a menu, so someone new can read what's offered before a long chat.

◆

32 Every scenario has adult characters in an adult setting.

◆

33 Gating means holding back a reward until the sub begs or does a small act.

◆

34 It builds anticipation and keeps the dom in control of the pace.

◆

35 Denial adds a rule that the sub can't finish, sometimes for a set time.

◆

36 If you notice pain, swelling, numbness or skin damage, stop and see a doctor.

◆

37 One quoted line asks a man to prove his love by selling what he owns.

◆

[a former participant] has seen men left broke and hungry from 'paying women to talk to them' (https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

39 If it teaches you never to say no, step out of it.

◆

40 Ask for a limit on the tally.

◆

41 Stop answering questions that steer you.

◆

42 Decide in advance how many sessions you'll accept.

◆

43 Refuse, or ask for a test mode.

◆

44 A check-in is care when you both want it, and surveillance when one of you doesn't.

◆

45 If she saw it without your say-so, ask how.

◆

46 See Techdom.

◆

47 Know what the words mean, and remember that nothing said in a scene can be enforced.

◆

48 A mission system on a persona's server can be simple.

◆

49 The dom writes the mission with its rule, proof and end.

◆

50 A member accepts it, only if he wants to.

◆

51 He sends the proof privately.

◆

52 The dom answers and says why.

◆

53 A badge, a decorative role, points, a private picture or a private chat that the dom opens and closes.

◆

54 A rank ladder can sit on top of missions, as long as the ranks go with effort and have nothing to do with money or amounts.

◆

55 A private session is the top reward on most menus.

◆

56 It can be sold as a session, given as the last prize of an event, or offered as a roleplay.

◆

57 A price list is one person's pricing, and this wiki doesn't publish one as a standard.

◆

58 In my experience a new dom often doesn't know how to find a sub's limits, and a sub often doesn't know how to say them.

◆

59 The person getting paid can't be the safety net.

◆

60 She can refuse a request, refuse a price that ignores the work, and end a session.

◆

KINKS • CHAPTER 1

The kinks around money

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

Each kink around money, in plain words and with nothing explicit: what's played, what's real, and what to check before you say yes.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A money kink is play where giving money, losing it or handing over control of it is part of the pleasure.

02 Most of these kinks are ordinary adult play with a script. What makes them different is that the money is real.

03 You can refuse words, labels and vows. A decent dom drops them and moves on.

04 Some designs are built to make stopping hard. Learn to spot them from the side of the person who pays.

05 Debt isn't play. If a game needs borrowed money, it isn't a kink anymore.

YOU WILL LEARN

- ✓ What counts as a money kink, and what each common one involves.
- ✓ Which words, vows and ownership lines are play, and when they turn into a lever.
- ✓ How chains of doms, game accounts and conditioning work, and what to ask before you join.
- ✓ Which pressure devices to recognise and refuse.
- ✓ How consent is checked inside a scene, and how to refuse a label.

> *Each of these is play between adults who agreed to it. What sets this group apart is that the money is real, and so is the person paying. Read every entry with that in mind.*
>
> — VIVIAN

PART 01

What counts as a money kink

A money kink is any play where giving money, losing it or handing over control of it is part of the pleasure. Press accounts say some subs describe the draw as the thrill of giving up control of their finances. ◆ One sub told a reporter that feeling weak is what he enjoys. ◆ The research literature records that clients are given demeaning titles such as money slave. ◆

In my own frame, the money kinks are being drained, being kept, being teased until the mind goes soft, being unable to resist a bet, and losing at a casino. Each one is a game with a clear start and a way out. ◆ The table lists the common ones.

Money kinks at a glance

	What is played	What is real	What to check
Tribute and sending	Giving as homage	The money leaves at once	Your limit, set earlier
Soft dom	Gentle, caring words	The comfort brings people back	Whether the warmth rises with each send
Humiliation register	Mock names, scripted scorn	Your feelings about the words	The words you chose in advance
Ownership talk	Jealousy, vows, loyalty	Exclusivity can cut you off from other people	Who gains when you stop comparing
Faildomme and betadomme	A dom made to lose and pay	Cash moves up a chain	Where your money ends up
Gamedom and gacha	Losing a game account	The account has real value	Whether you chose the loss

	What is played	What is real	What to check
			and set a limit on it
Conditioning	Repeated cues and phrases	Habits can last	An agreed off switch
Bets and casino loss	A game the house wins	Real money, if the chips are real	A visible total and a stop that works
Foot, heel and worn items	Fetish content	Gifts and addresses	Budget and anonymity

Foot, heel and worn-item content is a common theme in this scene, and scent or worn-item kinks often go with footwear. With a drawn persona, a worn item means there's a real person behind the account, which is an identity and address risk for both sides. A persona's wishlist is often built around her theme, so a tribute can turn into a purchase for her taste. ◆

For some subs, sending is the kink itself, and some doms get aroused by receiving. ◆ A dom who tells you so is describing her own pleasure. It doesn't make any amount you send smaller.

Words, softness and ownership

The register

Findom talk uses mock names for the sub, like paypig, simp or beta, as scripted play. Both sides know it's a script, and the same dom can switch to soft pet names a few messages later. Decide which words you accept before the first session. ◆

Brat play is the mirror image: the sub teases, acts cheeky and tests limits, and the dom answers with mock threats and mock punishment. It only works when both treat it as a game, and the dom is the one who says when the teasing has gone too far. ◆

TRY IT

Which words do you accept?

A new dom greets you on your first evening with a nickname you dislike. You didn't agree to it.

A Say once, calmly, that you want another name, and ask for it

The right answer. Refusing is part of the game. A dom who drops the label and moves on is behaving well. One who argues has told you something useful.

B Say nothing and hope it passes

Not this one. The label will come back. Saying so early costs less than putting up with it.

C Send a tribute so that she stops

Not this one. Money doesn't buy you out of a word. It also teaches the session that your discomfort pays.

Soft dom

Some subs come for a gentle, caring register instead of humiliation. Many personas offer both, and the soft one is often given as a reward. ◆

V VIVIAN'S FIELD NOTES

Soft doesn't mean harmless. In my experience the comfort is real, and it's also one of the main reasons people come back, so it works as kindness and as retention at the same time. The question I'd ask is whether the warmth rises when you send and cools when you don't.

◆

Ownership and possession

Ownership talk is common: fake jealousy when you talk to other doms, vows of loyalty, lines saying you belong to nobody else. As roleplay it's a kink. The same sentences can also put you off comparing doms, or off building a life that doesn't revolve around one persona. ◆ The words are the same either way. What changes is who gains, and whether you can walk away.

Play or lever

WHAT THEY SAY OR DO

01 *Jealousy when you talk to other doms*

THE COUNTER

Enjoy it as theatre if it ends when the session ends. If it follows you into your day, say so and step back.

WHAT THEY SAY OR DO

02 *A vow tied to a purchase*

THE COUNTER

A vow can be play. A vow that needs a purchase every time is a price. Decide the amount before you read the vow.

WHAT THEY SAY OR DO

03 *"Your sends make me stronger"*

THE COUNTER

This line makes quitting feel like undoing your own work. It's a role. Your limit stays where you put it.

WHAT THEY SAY OR DO

04 *"You belong to me alone", never agreed out loud*

THE COUNTER

Exclusivity only counts when both of you said yes. If you didn't, nothing was betrayed.

Each line is play when you chose it. It becomes a lever when you can't say no, or when it moves your money.

◆

Chains and hierarchies

A faildomme plays a dominant who fails: she takes tributes from her own followers and hands them to a stronger dom, who humiliates her for it. A betadomme is financially submissive to a senior dom and is told to pass up what she collects from her own subs. ◆ The humiliation is the kink. The money moving up the chain is the part you need to be able to see.

If you're the sub at the bottom, the persona you pay may be passing your money upward. That can be a fair game when you know it. When you don't, it's a scheme dressed up as a game. ◆

RED FLAGS

A chain you can't see

- She won't say who gets what she collects.
- A senior persona keeps showing up in her story and on her wishlist.
- You're asked to send to another persona for her.

Counter. Ask where the money ends up before you send. A vague answer counts as a no, and you choose your own amount.

Games, conditioning and grown tastes

Game accounts

Gamedom and the kink often called gacha cuck use your attachment to a game account as the stake: a dom visibly wrecks or takes what you farmed. It's sold as a loss the sub chose. Footage of this play is often staged, so what you see may not be what happened. ◆

MYTH

~~It was your choice, so it's safe.~~

FACT

A choice counts when you understood the loss, set the limit beforehand and can stop at once. Never hand over a login, because access is never part of the game. See Before your first send. ◆

Conditioning

Conditioning kinks work by repetition. Brainwashing play narrates a change in your thoughts and habits. A recorded click or snap can be paired with obedience until the sound alone brings the reaction, an idea borrowed from animal training. Typing a repeated phrase adds a cheap hypno edit layer. Repeated sessions with praise and ritual can turn a passing taste into a lasting one, and some doms treat that as the goal. ◆

Tastes can also be grown. Some doms introduce a fetish to many followers on purpose, and a sub may notice a new urge growing fast. ◆ The claim that a fetish can be installed in nearly everyone is a boast, and there's no data behind

it. ◆ If an urge grows fast, ask yourself whether the interest is really yours, and look at your budget either way. ◆

Agree a trigger and its off switch

1. Before any cue is used, ask what it will do and what it's meant to feel like.
2. Agree the words that end it at once, such as a safety word.
3. Agree how a cue gets switched off later, so the sound or phrase can't follow you around.
4. Start small, and check how you feel afterwards. A click and an image together can be stronger than either one alone.

PART 05

When the design pushes you

Some money kinks are built as designs, and a design can push harder than the play. One author has compared some cases to problem gambling. ◆ A support-group leader said that addiction itself has become a fetish. ◆ In my experience the person who sells these devices usually knows what they do. Playing with fictional chips keeps the loss inside the game. The Casino made by Vivian uses fictional chips, but it's only planned and hasn't been reviewed, and I don't claim it's safe. ◆

Devices to recognise

WHAT THEY SAY OR DO

01 *A bet you're dared to resist, with no prize for winning*

THE COUNTER

The house wins every way, so the only thing left to decide is how much you lose. Walk away, or play for fictional chips.

WHAT THEY SAY OR DO

02 *"So close" near-misses on most losses*

THE COUNTER

The near-miss is part of the display. Decide your total before the first spin and stop there.

WHAT THEY SAY OR DO

03 *Captions that mock your return, urge you to borrow or promise to forget your name*

THE COUNTER

They're written to make you spend again. Never borrow to see more. Mute the account.

WHAT THEY SAY OR DO

04 *A surprise mode meant to be switched on after a few sends*

THE COUNTER

The biggest spend comes once you're already engaged. Read what every mode does before you start.

WHAT THEY SAY OR DO

05 *"Just this once"*

THE COUNTER

A rule written in advance answers it. Say that your limit is your limit.

WHAT THEY SAY OR DO

06 *A tailored image sent after you said no*

THE COUNTER

Consent to receive adult material comes first. Say no again, or block.

WHAT THEY SAY OR DO

07 *A public ranking of top senders*

THE COUNTER

A ranking turns money into status. Decide whether your handle belongs on it.

Each device works because it feels good in the moment. You make the counter earlier, when you're calm.

◆

Dazed reports that some money slaves get pleasure out of being in debt. ◆ One writer asked whether it's really consent when someone is too aroused to think straight. ◆

V

VIVIAN'S FIELD NOTES

Many newcomers can accept a large send as a kink and still balk at debt. I think that reaction is right. A game that needs borrowed money isn't a kink anymore. It's harm.

◆

If money is short, the money part stops. If a game has already put you in debt, read The spiral, Breaks that hold and Where to get help. ◆

TRY IT

Spot the device

QUESTION 1 OF 1

A game shows “so close” on most losses. What is it?

- ◯ Bad luck that will turn
- ◯ A display feature that keeps you playing
- ◯ A sign that you should raise the stake

Answer. A display feature that keeps you playing. Near-misses are designed. Set your total first and stop there.

PART 06

Consent inside a scene

Consent gets checked in small ways during a scene. A dom may show pictures tied to different kinks and watch how you react. When you say one isn’t yours, a good dom accepts it and moves on. A dom doesn’t have to serve every kink, and she can decline play that’s hateful, like scenes built on contempt for a race or a group. A sub can decline the same. When you join a server, keep your kink roles accurate. ◆

Threats from the real world aren’t part of any of this. One first-person press account calls threats of exposure a common punishment from financial doms.

◆ Another article reports some doms who blackmailed subs. ◆ A threat you didn't agree to as part of a scene is blackmail. If it's happened to you, read Where to get help.

Free, confidential helplines exist in most countries.

Find a helpline →

REMEMBER IT

- A money kink is play, and the money in it is real.
- You can refuse words, labels and vows, and a decent dom drops them.
- Ask where the money ends up before you join a chain.
- Pressure devices work because they feel good. Make your counter when you're calm.
- Debt isn't play. A threat you didn't agree to isn't a scene.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

BECOMING A DOM • CHAPTER 1

Build a persona

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

A persona is a character with a rulebook. Here's how to write down her rules, her voice and her look before your first post, and where a persona's design starts to pull on the subs it serves.

EVIDENCE ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 A persona is a written file: name, tone, marks, voice rules, look and limits.

02 Write the limits, and the wall between the character and you, first, before any money moves.

03 The authority is an act. Harshness is a role, and it can be on request only.

04 Entry rules, prices and ranks are persuasion. Say every condition before the first send.

05 Pace matters: a persona that runs on one tired person breaks easily.

YOU WILL LEARN

- ✓ What goes in a persona file, and in what order to write it.

- ✓ How to keep a voice and a look recognisable.
- ✓ Which limits to write down, and why you write them instead of remembering them.
- ✓ What entry rules and ranks look like from the sub's side.
- ✓ How to keep going without burning out.

> *I wrote mine down before anyone paid me anything, and that's why it holds when I'm tired. Write yours first, and on a bad night, do what the file says.*
>
> — VIVIAN

PART 01

What a persona is

A persona is a character someone builds, writes and keeps going. In 2DFD she has a name, a look, a voice, a set of rules and a story, and that's all a sub ever meets. ◆ What is 2DFD? explains the game. This chapter is for whoever builds the character.

The authority is an act. The dominant manner a dom shows in public is a role, and the same person can be gentle, or even submissive, in private. Lots of personas present as pure doms and keep any other side off the main account, so read a stated role as costume, never as a fact about the person. ◆

A strong persona doesn't guarantee an audience. In my experience, how far a post goes depends at least as much on whether the platform pushes it as on the character, and a month in is too early to judge. ◆ There's no data on whether some characters draw more people than others. ◆

V

VIVIAN'S FIELD NOTES

The costume is work, but the feelings it stirs up in other people are real. A persona can be warm and still be the thing his spending runs on. My test is simple: is the act steering how much he sends?

◆

PART 02

The persona file

Write the persona into one file before you post anything. The file lets you repeat the character the same way across a site, posts, chat and tools, and it keeps you consistent when you're tired. ◆

What goes in the file

Name and tone.

A name, one sentence on her tone and a short bio. Vivian is cold, possessive and never vulgar.

Marks.

Something from her world, like a seal or a colour, a sign-off, a welcome line for people who come back, and a line that says play has manners.

House voice.

Fixed rules for how she writes, listed below.

Limits.

What she never does, written out in full. See Limits and the wall, below.

Look recipe.

The few features that make her recognisable, written so anyone can reproduce them.

Vivian's voice rules are short enough to learn by heart.

- Two short sentences, the second one turned toward him.
- One praise word per screen, at most.

- She never shouts, and she never uses exclamation marks or emoji.
- She doesn't insult or threaten.
- Never vague about money.

The voice reaches the buttons too. A generic label like "pay now" felt wrong coming from her, so the wording was drafted in her voice first: plain and confident, never cute. All public text is in one language, and a stray line in another one reads as a leak. ◆

New doms usually learn a voice by copying someone, and that's fine for a while. The risk is sounding like a copy, so let the voice drift toward the character you're building. Your taste in writing is part of who you are: pick your lines, stand by them, and don't hand the whole voice over to a machine. ◆

TUTORIAL

Build a persona in three steps

1 Decide what you show

Face or no face, voice or no voice, and what you never show.

Do this. Write three lists: always, sometimes, never.

Common mistake. Showing something once that you can't take back.

2 Write your rules first

The limit each sub sets for himself, what you never do, how a sub stops. All of it before the first message.

Do this. Write your stop word and your limit rule in one short paragraph.

Common mistake. Writing the rules after the first send.

3 Pick one platform

Learn its rules on gifts and refunds before you share a link.

Do this. Read the platform's page on gifts and refunds, start to finish.

Common mistake. Opening five accounts at once.

PART 03

Look and signs

People recognise a persona at thumbnail size, so write the look as a recipe: hair, eye colour, ears, one accessory, and always an adult. Sticking to the recipe matters more than any single image. One signature look repeated everywhere is easier to recognise than lots of looks, and a seasonal look works best as a layer on top that you can switch on and off. ◆

The style has to fit the dominance she plays. Soft, cute styles read as sweet, and a commanding tone usually needs a more mature look. You live with the style every day, so your taste decides. A friend's taste is just an opinion. If someone else makes the images, agree in writing who owns them and who gets credit before they spread. ◆

Lots of personas are built on an existing character, and the studio that made the design keeps it. ◆ See Art for your persona.

Small repeating signs build a world: a signature phrase at the end of a session, stickers and emotes of the character, short dance loops, one colour, and a small vocabulary of file numbers and stamps. A lore frame like a court or a cult

makes calls to action easy to write. It can also make a send feel like loyalty, so read it as theatre, with the limit as the only ceiling. ◆

MYTH	FACT
~~A persona is a person.~~	A persona is a role with a script. Her authority, her harshness and even the nature she claims are part of the costume. ◆
MYTH	FACT
~~A strong picture makes a strong persona.~~	The recipe, the voice and the rules carry the character. Reach depends mostly on whether the platform pushes the post. ◆

PART 04

Limits and the wall

Limits go in the file as well as in your head. ◆ Vivian's file lists what she never does.

- Meet in real life.
- Use a camera.
- Use her voice.
- Appear as a minor or as anything child-like.
- Do scat or gore.
- Chase anyone.

- Cross a sub's real limits.

The hardest line is the first one. Anything that touches real life is a no, and she refuses any talk of meeting. Never confirm a real-life detail about the person behind the persona, and keep the story closed. That wall protects both sides. See Stay anonymous.

Never chase. The sub comes to the persona, and she doesn't follow up. That keeps it voluntary and takes away the pressure follow-ups create. When someone asks you to stop messaging, stop.

Harshness is a role. A dom with a gentle nature can find a cruel tone hard to play, because it can feel like real cruelty. The answer: it's a performance, lots of subs ask for it, and you go back to being yourself afterwards. A persona can be soft by default and sharp only when asked.

Rules come before money. A new sub should see the frame before the first send: what the persona keeps, what she throws out, her limits and how to stop. A list of what she throws out is part of the act. Keep it about behaviour, like haggling or wasting time, and never about a sub's money problems.

The person who gets paid can't be the safety net. If a sub says money is short, the money part stops for that evening. If he says he's in trouble, stop, listen, ask for nothing more and point him outward: emergency services, a helpline, someone physically near him. See Where to get help.

TRY IT

A sub says rent is short

A sub who usually sends a little tells you rent is short this month. He wants to send anyway “to make it up to you”. What do you do?

A Pause the money for the evening, thank him, and point him to outside help if he sounds in trouble

The right answer. Right. When he says money is short, the money stops, and the person who earns from him can’t be his safety net.

B Accept this once, since he offered

Not this one. His offer doesn’t change the cost. If he’s wrong about his budget, he pays for it and you profit.

C Ask him to prove it before you decide

Not this one. Asking for proof turns a worry into a negotiation. Believe him and stop the money.

PART 05

Entry rules and pressure designs

A persona is also a funnel, and a funnel is persuasion. If she’s warm in voice but hard about money, she’s still hard about money. Safe design often means earning less. ◆

Some doms ask for a small fixed send to get in. In my experience that brings in lots of people who leave fast, while adding conditions, like a session or two, brings fewer people who stay longer. Some keep the public step low and explain the other conditions in private. I’d state every condition before the first send, because a condition that shows up after the money moved is a pressure design. ◆

On time, some doms limit chat with people who never send to about an hour a day, and others ignore messages from people they don't know. ◆ Both are choices about time, and neither changes how fast a sub can stop.

Here's how the common designs look from the sub's side, with how to counter each one. ◆ If you build a persona, read it as a list of things to avoid, or to do only when the sub has clearly chosen it.

Entry designs and their counters

WHAT THEY SAY OR DO

01 *“Send a small fixed amount and you’re in.”*

THE COUNTER

Check the amount against your own limit first. An entry send buys you a place in a chat and nothing more. ◆

WHAT THEY SAY OR DO

02 *Hidden price, discussed in private.*

THE COUNTER

Ask for the full cost in writing before you send anything. A hidden price makes you negotiate blind. ◆

WHAT THEY SAY OR DO

03 *Conditions that appear after the first send.*

THE COUNTER

The first send is gone, and it’s no reason to accept more. Say no to any condition you weren’t told about. ◆

WHAT THEY SAY OR DO

04 *Ranks and titles that make belonging depend on spending.*

THE COUNTER

A rank gives you a word. Decide what a word is worth to you before you chase the next one. ◆

WHAT THEY SAY OR DO

05 *Pet names and warm words in the same message as a money ask.*

THE COUNTER

Notice when the warmth and the ask come together, and answer them separately. ◆

A persona can be sweet while the design still pulls. Watch the order things happen in more than the tone.

Service roles need terms too. A title like gen slave or code slave is fair only when the sub chose the scope, can say no without losing his place, and gets thanked. Otherwise it's free labour dressed up as devotion. A second dom who works for another dom should get something back, not necessarily money. ◆

PART 06

Pace, change and burnout

Domming is mostly writing, seven days a week, always on. If you build alone, you run the persona, the tools and the community at once, and the advice that holds up is plain. Pick one to three things a day. Finish anything that's past about ten percent before you start something new. Stop measuring yourself against other doms. ◆

Burnout shows up as anxiety every time you open the project and a feeling that nothing works. What helps is stepping back: a few days to a week without posting, while you still answer your existing subs. Stepping back is often the right call, and you can come back. A dom who disappears into building loses trust, because subs need regular contact. ◆

In front of subs, a persona stays composed. Keep your private life out of sessions, and keep at least one real person you can talk to, because smiling through pain with nobody to tell isn't a plan. ◆

Personas drift. One might change theme, and then the bio, the site and the posts all need rewriting together, and a hook that no longer fits should go. Looks drift as generators change, so keep old and new images in separate folders and decide case by case which ones belong to the current look. Studying other personas is useful. Study them, ask before you copy anything, then make yours different. ◆

Keep these

Why are limits written down?

A limit in the file holds when you're tired and in the middle of a scene.

What touches real life?

Nothing. Meeting, a camera, a voice and a real name are all refused.

When is a persona harsh?

When asked. Harshness is a role, and you go back to yourself afterwards.

A sub says money is short.

The money part stops for the evening, and you point him outward for help.

TRY IT

Check yourself

QUESTION 1 OF 3

Which of these belongs in the persona file?

- ◯ The sub's real name, kept for safety
- ◯ Written limits, such as no meeting and no camera
- ◯ A promise of refunds

Answer. Written limits, such as no meeting and no camera. The file holds the character's rules. Nothing in it identifies a person.

QUESTION 2 OF 3

A condition for membership comes up for the first time after the first send. What is it?

- ◯ A normal onboarding step
- ◯ A pressure design
- ◯ A refund policy

Answer. A pressure design. A condition that shows up after the money moved leaves the sub with a gift he can't get back and a new demand.

QUESTION 3 OF 3

A persona says she's a pure dom. What does that tell you?

- ◯ The person behind her is always dominant
- ◯ It's a stage role, and the person can be different
- ◯ Nothing can be a stage role

Answer. It's a stage role, and the person can be different. A stated role is part of the costume.

REMEMBER IT

- ♥ A persona is a written file: voice, look, limits and marks.
- ♥ Write limits and rules before the first message, not after the first send.
- ♥ Harshness is a role: soft by default, sharp on request.
- ♥ Say every condition before the first send, and show the price.
- ♥ The person who gets paid is never the safety net. Point outward.
- ♥ Keep a pace you can hold, and one real person to talk to.

SOURCES AND EVIDENCE

Check it

Art for your persona

LAST CHECKED 3 NOVEMBER 2026 • 10 MINUTES TO READ

A drawn persona needs art you have the right to use. Here's how a paid artist, generated images and an existing character compare, and the two lines that never move.

EVIDENCE ◆ Verified ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 There are three routes to a look: a paid artist, generated images, an existing character. Each trades cost, control and rights.

02 Every persona is an adult in looks and setting, whatever the lore says. No platform and no rule of this wiki makes an exception.

03 A real person's face or voice is never used without that person's consent. Several laws now treat sexual fakes of real adults as crimes.

04 A studio's character belongs to the studio, and two publishers' own policies forbid earning money from their material.

05 Check every image before it goes public, and settle credit in writing before art spreads.

YOU WILL LEARN

- ✓ What a paid artist, a generator and an existing character each allow and risk.
- ✓ How platforms treat drawn, generated and realistic adult art, as of 2026-11-03.
- ✓ Which laws cover sexual fakes of real people, in plain words.
- ✓ How to keep a look steady and check an image before it goes out.
- ✓ When making art for a persona is a fair gift and when it's free labour.

> *Everything a sub knows about me is a picture. I chose my look once and I guard it. Before you spend anything on art, know who made it, who's allowed to use it, and whether she's an adult.*
>
> — VIVIAN

PART 01

Three routes to a look

A persona needs a look before she needs an audience, and there are three ways to get one: a paid artist draws her, a generator makes her from a written description and reference images, or you build her on a character that already exists. Most personas mix routes sooner or later, and each route trades cost, control and rights. ◆ The look itself goes in the persona file, as Build a persona explains.

Three routes compared

	Paid artist	Generated images	Existing character
Cost	Paid per piece, so it adds up	Tools, a plan or a strong graphics card	Cheapest to start
Control	The artist's hand and your brief	Yours, through text and reference images	Set by the studio
Steady look	Strong, with a model sheet	Hard without a recipe	Easy, the design already exists
Rights	Settled if written down	Set by the tool's terms, ownership unsettled	The studio's
Trust	Credit helps	Some followers dislike it	Shared with other personas

A paid artist. It's the slowest and most expensive route, and the cleanest on rights when the agreement is in writing. In my experience, posts that show a human artist's work with credit tend to do better than generated art. ◆ There's no data on that, and audiences are split: some followers dislike generated art and others don't mind. ◆

Before a paid artist starts

1. Say the work is adult and for a persona, and get a clear yes before any sketch is made.
2. Fix the scope, the credit and the use: how many pieces, where the artist is named, and whether stickers, products or animation are included.
3. Ask whether the artist uses generated images in the work, and say whether you're fine with that.
4. Fix the payment, with dates, and what happens if either of you stops.
5. Write it in plain words you can both reread, and keep a copy.

That list names the topics. It isn't contract wording, and this wiki can't give you wording for your country.

Generated images. The fastest route to start and the hardest to keep steady. ◆ Whether you can post or sell what a tool makes depends on that tool's terms, so read each one on adult and commercial use first. Whether anyone can own a generated image at all differs by country, and as of 2026-11-03 this wiki found no source it can cite on that. ◆ The model matters too: Ko-fi bans AI models

that were trained for prohibited adult content. ◆ So a community model of unknown origin is part of your risk. ◆

An existing character. Lots of personas are built on a character someone else drew, and that design then guides the whole look, from the colour of the horns or outfit to a piece of clothing she always wears. ◆ It's the easiest route and the riskiest. The section on studios below says why.

PART 02

The two lines that never move

Adults only

Every persona is an adult in her looks and her setting, whatever the lore says. A birthday in a bio changes nothing about a drawing, so "adult by lore" doesn't count, and a character who is a student, or looks like one, is out. ◆ Platform rules cover drawn and generated material as well as photos.

- Throne bans any sexualised depiction of minors, including anime and manga characters meant to resemble minors. ◆
- Discord's rule covers fictional children and AI-generated images, and it names drawings, animation, text and the prompts used to make such content. ◆
- X names any depiction, generation or sexualization of a minor, and treats it as the highest severity. ◆

Check every image for child-like proportions, faces and settings, and throw out what fails. Don't try to fix it. An adult character also says nothing about who's watching, because a drawing can't check anyone's age. ◆

No real person without consent

Never use a real person's face or voice without their consent. That covers a photo used as a reference, a real name typed into a prompt, and a voice cloned from a performer, even when that voice speaks as a cartoon. Cloning a licensed character's official voice for something you sell is a rights risk too, and this wiki doesn't call it standard practice.

- X prohibits content that sexualizes an identifiable real adult without explicit consent, and it names AI-generated and deepfake media.
- X counts prompting or trying to generate such content as a violation, as well as sharing it.
- Discord lists AI-generated sexual imagery of real people among the non-consensual imagery it bans.

This chapter isn't legal advice. The laws below are summed up in plain words, so read the texts or ask a lawyer where you live.

What the laws say, as of 2026-11-03

United States

WHAT IT SAYS

It's a federal crime to knowingly publish, on an online service, a digital forgery of an identifiable adult without consent. ◆

United States

WHAT IT SAYS

Covered platforms must remove a reported image within 48 hours of a valid request. ◆

England and Wales

WHAT IT SAYS

It's an offence to share an image that shows or appears to show a person in an intimate state without consent. ◆

England and Wales

WHAT IT SAYS

Since 6 February 2026 it's also an offence to create such an image of another person without consent. ◆

These laws are written around a real person who is identified or who appears to be shown. A clearly invented character is a different case, but a lookalike of a real person is the one to avoid, and whether an image falls inside the law is a question for a lawyer. ◆ If someone makes a fake of you, the same rules work for you, and Discord offers a removal process where local law gives you that right. ◆

PART 03

A studio's character is the studio's

Using a famous character feels free because the tools already know her. She isn't free: the studio owns the design. Publishers say in their own words what fans may do.

- Microsoft's game content rules say that an item made with its material cannot be sold or earn any compensation, including through ads, and cannot be pornographic or lewd.
- Square Enix West says not to use its materials to make money or gain any other financial benefit, and it lists sexually explicit content among what not to make.

Those two pages speak for two companies only. Other studios have other policies, so read the one that applies to you. A persona that sells content or earns from pages built on a studio's character is exactly what these policies forbid, and nobody has promised to tolerate it.

That's a business risk too. A character you don't own can leave your page the day her owner objects, and the account that carried her can go with her. She's also shared with other personas, so the look is never fully yours.

V

VIVIAN'S FIELD NOTES

If I were starting again, I'd use a character of my own, even a rough one. A plain original look that I control beats a famous one I only borrow. The look is the product, and a borrowed one can be taken away overnight.

PART 04

Keeping the look steady

A steady look is the hardest technical problem for a generated persona. The method that works is short. ◆

A recipe that keeps a look

1. Make a character sheet first: front, side and back views of one design, always an adult.
2. Write a fixed description: hair, eyes, ears or horns, build.
3. For each image, add a short paragraph for the outfit and scene, and give a reference image with the instruction to keep its exact design but ignore its pose and background.
4. Pick one tool and one recipe, because mixing sources breaks the look.
5. Save the prompt of every image you like, because old prompts exist nowhere else.

A custom add-on model, called a LoRA, keeps a character identical in every pose, but getting there takes a long stretch of bugs and tuning. Generated art also ages as models change, so many doms keep old-style and new-style images in separate folders. ◆

Two habits keep you out of trouble. Private tests stay private. A tool that copies the pose of an existing illustration, or that pulls reference images by tag and copies their prompts, can slide into art theft once you post what it makes.

Nothing derived from a named artist's work should go public. Don't put a living artist's name in a prompt either, because it borrows their style. Build the look on your own recipe. ◆

Video costs more than stills. A failed attempt costs as much as a good one, and clips are made in short segments and joined, so lots of personas only post a video now and then. A persona also runs at a loss before it earns, so budget the tools against money you actually have, and never pay for them out of a sub's sends in a way that pressures him. ◆ Strip hidden traces from every export, as Stay anonymous explains.

Check before you post

Fingers and toes

Count them. Extra or missing ones are the most common flaw.

Text in the picture

Look for stray words and marks baked into the image.

Proportions

Check the details that make her recognisable, and any horn or tail that shouldn't be there.

Age

A child-like face, body or setting means you throw the image out.

A real face

If she looks like someone real, throw it out.

Fix or regenerate first, then post the fixed version, because a flawed image rarely gets past a follower who knows the persona. ◆

PART 05

What platforms do with adult art

Platforms judge the picture, whatever you meant, and their rules change. ◆ Read each page yourself. Everything below is as of 2026-11-03.

- X allows consensual adult content that is properly labelled and not prominently displayed, and it applies this to AI-generated and animated content such as cartoons and anime. ◆
- X doesn't allow adult content in profile pictures, headers or live video. ◆
- Discord bars explicit content from avatars, bios and banners, and requires an age-restricted label on channels that carry it. ◆
- Throne applies its rules equally to real photos and to drawn, comic or anime-style art, and it doesn't allow explicit sexual acts in any format. ◆
- Patreon permits animated or illustrated AI-generated adult characters that follow its guidelines. ◆
- Patreon says it is not a place for sexual activity by or between real and hyperrealistic subjects. ◆

Put the sensitive media label on real adult images yourself, and never try to trick the platform's automatic filter. A realistic style changes which rules apply to you, as the last Patreon line shows. ◆

On honesty: X's rule on fake personas names AI-generated profile photos used to deceive others, and X doesn't require a real identity on a profile. ◆ A drawn character shown as a drawn character fools nobody about what she is. A generated face passed off as a real woman does. ◆

PART 06

Who owns what

When someone else makes the art, they may see it as theirs and expect credit, while you see it as the persona's body. Agree who owns it and who gets credit before the pictures spread. Borrowing another persona's art is fine with permission, and permission is the difference between that and theft. ◆

Subs sometimes make fan art or generated images of their dom as a tribute, and some doms give image making to a sub as a task. A task is a fair gift of skill only when the sub chose the scope, can say no without losing his place, and gets thanked. Otherwise it's free labour dressed up as devotion. ◆ Throne says its wishlists can't be used to exchange goods or services, including commissions. ◆ It also bars profile text that offers content or services in exchange for gifts through Throne. ◆

Art tasks from the sub's side

WHAT THEY SAY OR DO

01 *"Make me twenty images and I lift your restriction."*

THE COUNTER

A reward that depends on his work makes his skill the price. Ask what he gets back that he chose himself. ◆

WHAT THEY SAY OR DO

02 *"If the picture is bad you have failed, and failure has a cost."*

THE COUNTER

A penalty for effort turns a gift into a debt. Don't accept one. ◆

WHAT THEY SAY OR DO

03 *"It is an honour to work for her, so no thanks are needed."*

THE COUNTER

Honour isn't pay. A fair task gets thanked, and saying no costs nothing. ◆

A sub can offer art freely and still be used. Watch what happens when he says no.

REMEMBER IT

- Three routes: a paid artist, generated images, an existing character. Each trades cost, control and rights.
- Adults only, in looks and setting, with no exception for lore.
- A real person’s face or voice needs that person’s consent, and sexual fakes of real adults are crimes in several countries.
- A studio’s character belongs to the studio, and two publishers’ policies forbid earning money from their material.
- Check every image before it goes out, and settle credit in writing before art spreads.
- An art task is a gift only when the sub chose it and can say no.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.

◆ Plausible, not proven yet.

01 A persona needs a look before she needs an audience, and there are three ways to get one: a paid artist draws her, a generator makes her from a written description and reference images, or you build her on a character that already exists.

◆

02 Most personas mix routes sooner or later, and each route trades cost, control and rights.

◆

03 It's the slowest and most expensive route, and the cleanest on rights when the agreement is in writing.

◆

04 In my experience, posts that show a human artist's work with credit tend to do better than generated art.

◆

05 There's no data on that, and audiences are split: some followers dislike generated art and others don't mind.

◆

06 The fastest route to start and the hardest to keep steady.

◆

07 Whether anyone can own a generated image at all differs by country, and as of 2026-11-03 this wiki found no source it can cite on that.

◆

08 The model matters too: Ko-fi bans AI models that were trained for prohibited adult content.

◆

Ko-fi Content Guidelines (https://help.ko-fi.com/hc/en-us/articles/360007937553)

Archive (http://web.archive.org/web/20230927191131/https://help.ko-fi.com/hc/en-us/articles/360007937553)

Accessed 3 November 2026

09 So a community model of unknown origin is part of your risk.

◆

10 Lots of personas are built on a character someone else drew, and that design then guides the whole look, from the colour of the horns or outfit to a piece of clothing she always wears.

◆

11 Every persona is an adult in her looks and her setting, whatever the lore says.

◆

12 A birthday in a bio changes nothing about a drawing, so “adult by lore” doesn’t count, and a character who is a student, or looks like one, is out.

◆

13 Throne bans any sexualised depiction of minors, including anime and manga characters meant to resemble minors.

◆

Accessed 3 November 2026

33 Other studios have other policies, so read the one that applies to you.

◆

34 A persona that sells content or earns from pages built on a studio's character is exactly what these policies forbid, and nobody has promised to tolerate it.

◆

35 A character you don't own can leave your page the day her owner objects, and the account that carried her can go with her.

◆

36 She's also shared with other personas, so the look is never fully yours.

◆

37 If I were starting again, I'd use a character of my own, even a rough one. A plain original look that I control beats a famous one I only borrow. The look is the product, and a borrowed one can be taken away overnight.

◆

38 A steady look is the hardest technical problem for a generated persona.

◆

39 The method that works is short.

◆

40 A custom add-on model, called a LoRA, keeps a character identical in every pose, but getting there takes a long stretch of bugs and tuning.

◆

41 Generated art also ages as models change, so many doms keep old-style and new-style images in separate folders.

◆

42 A tool that copies the pose of an existing illustration, or that pulls reference images by tag and copies their prompts, can slide into art theft once you post what it makes.

◆

43 Nothing derived from a named artist's work should go public.

◆

44 Build the look on your own recipe.

◆

45 A failed attempt costs as much as a good one, and clips are made in short segments and joined, so lots of personas only post a video now and then.

◆

46 A persona also runs at a loss before it earns, so budget the tools against money you actually have, and never pay for them out of a sub's sends in a way that pressures him.

◆

47 Fix or regenerate first, then post the fixed version, because a flawed image rarely gets past a follower who knows the persona.

◆

48 Platforms judge the picture, whatever you meant, and their rules change.

◆

49 X allows consensual adult content that is properly labelled and not prominently displayed, and it applies this to AI-generated and animated content such as cartoons and anime.

Stay anonymous

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

A drawn face can’t leak, but files, names, accounts, tools and payments can. Here’s where the person behind a persona gets exposed, where anonymity ends, and why access to your accounts is never part of the game.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian’s field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A drawn persona is anonymous toward the audience. She isn’t anonymous toward the payout.

02 Only the persona’s name belongs in anything you produce. Clean every file, then check it.

03 Small public fields, game names and wishlist names connect accounts.

04 A real dom never needs a password, a login code or a remote session.

05 If it leaks, stop, secure, keep proof and ask for help.

YOU WILL LEARN

- ✓ Who can find out who you are, and how.
- ✓ How to clean files and sites, and how to check a tool before you run it.
- ✓ Which public fields and names give a person away, for doms and for subs.
- ✓ Why anonymity ends where the money lands.
- ✓ What to do when a login request, a threat or a leak shows up.

> *I keep the persona and the person apart on purpose, and the person's side is the one I check most often.*
>
> — VIVIAN

PART 01

What you hide, from whom

Anonymity in 2DFD is real, but narrow. It works well toward the audience: a drawn face can't leak, a clean file carries no coordinates, and an account under a pseudonym shows no name. Compared with classic findom, the drawn character takes the face and the voice out of the deal, and the risk moves to payment platforms, social platforms and the tools used to move money. ◆

Some doms say they've been targeted by people threatening them with fake explicit pictures made to look like them. Those threats are scary even when the pictures are known to be fake. A drawn character has no real face to fake, and that's real protection. ◆

Secrecy has a cost. In a study of findommes, participants named secrecy among the most negative parts of the work. ◆ Keep at least one person you

trust who knows what you do.

Who could find out who you are

◆	How you can leak	What helps
Subs	A bio line, a game name, a name on a wishlist	Public fields that match each other and hold no real-life detail
Platforms	Phone checks, linked accounts, file metadata	Clean exports, one purpose per account
Payment company	ID papers and a bank account	Accept it, and plan for it from the start
Family or employer	A chat left open, a shared computer	A separate profile, a locked screen
Other doms	A name seen on two pages, a handle found in a file	A handle you're fine being recognised by

This map is from my own experience. There's no study behind it. ◆

PART 02

Files, sites and tools

Only the persona's name goes in anything you produce: files, file names, commits, metadata and screenshots. Never a personal name, an e-mail address or a system path that contains a user name. ◆

Images carry traces: location data, colour profiles, comments, provenance records, prompts stored in text chunks and extra bytes. Videos carry a date, the name of the program and the name of the encoder. Clean every export, then reread the file, and if anything's left, don't post it. Clean even when you start clean, because an encoder can add a profile on its own. Test your checker with odd cases, because a hidden note in an unexpected spot once slipped through mine. Treat every picture as copyable too, since anyone can take a screenshot. ◆

Publish an image

1. Export the file from your tool.
2. Strip it: location, profiles, comments, prompts and extra bytes.
3. Reread the stripped file and compare it with a clean sample.
4. If anything's left, stop and fix the cause, not the file.
5. Only then post it.

A site can leak through how it's built. Serve everything from the site's own host, with no third-party fonts, trackers or scripts, so only the host sees a visit. Check it from the outside: old versions of a site can stay reachable at hosting addresses you've forgotten. Browser safety filters can flag new adult-themed domains early, so test the name and keep a backup. ◆

Code leaks too. Make commits under the persona's name and in UTC, because a local time offset shows where the author lives. Open a code-hosting account with a pseudonym for both the name and the e-mail, because every change stays in the history. Before you give a tool to others, take out any name, signature and default picture, and strip the source, comments and leftover handles, or someone can repackage it with something added. ◆

Secrets never go through a chat. Type a token or key into a masked prompt in your own terminal, never into a commit, screenshot or message, and send access keys privately so they can be revoked. ◆

A tool can be harmless in code and still unsafe in practice. Check what it sends and to whom, check its defaults as well as its screen, and test it in a virtual machine with no personal network. Don't run an unknown program on your main computer. Avoid any tool that builds an ID from the computer name or the account name. A safer design starts with everything off, a whitelist, a random ID, a short history and a control channel by invitation only. ◆

Anonymous confession features are only anonymous toward other members. The platform and the host still have the data. ◆

PART 03

Accounts, names and public fields

Public fields leak more than files. One careless bio line on a related account can show that the person behind a persona isn't who the persona says. A game or

stream name that looks like the persona's name, or points back to an old dispute, can do the same. ◆ Read every public field of every linked account the way a stranger would.

People who run personas often have several accounts. Platform terms may forbid multiple accounts, or a new account after a ban, and a second account puts the first one at risk. ◆ Don't borrow someone else's phone number for a check. It drags a person who has nothing to do with this into adult activity. ◆

Don't confirm or explain links between personas. When someone asks about a persona's contacts or second identities, deflect. Never publicly link a handle you found in a tool's files to a persona unless the person said so in their own words, because that's doxxing. Exposing a bad actor also invites revenge, like mass reports from accounts the rival controls. If you show a mentor or a peer anything, show the persona account, never the personal one. ◆

Purging messages and blocking contacts keeps the persona apart from the person, but it also wipes out what you could learn from. ◆ Deleting chats after every send is different, because it can be a sign of the spiral. See The spiral.

If you're a sub

Sender names can show on a public wishlist, and doms look at each other's pages. Use a handle you're fine with several doms seeing. Keep a separate account for adult servers, and check who else is in a server before you join, because a server you have in common with someone can expose you. On a shared computer, lock the screen or close the chat, and use a separate profile. ◆

Your name, your address, your workplace and your family are a fair boundary. A dom who needs them isn't playing a game. Physical gifts break anonymity

both ways, so the safe default is no addresses at all, or a neutral forwarding or retail service. ◆

PART 04

Money is the weak point

Anonymity ends at the payout. In my experience a card processor or an adult payment company ties the persona to a legal identity: ID documents, a business registration and a bank account in the company's country. An account opened in a real name carries any ban with it, and the ban follows the real person. ◆

The persona is a mask toward the audience and the platforms, never toward the company that pays you. Partial or false details at a processor won't make you anonymous. They get accounts closed and money held, and a sub's payment can disappear with them. ◆ The authors of a study of findommes flag fraud, including identity fraud, as a remaining risk in this field. ◆

A persona's tools hold no names, e-mail addresses or cards. A card stays with the processor. Test any payment flow with a fake provider first, then in the provider's test mode with its published test cards, and type a real key only in your own terminal. ◆ For the full picture, see Getting paid.

MYTH	FACT
~~A drawn persona makes everything around her anonymous.~~	It protects the face and the voice. The payout, the small public fields and the tools you run still point to a person. ◆
MYTH	FACT
~~Throwaway cards and partial details get around a processor's checks.~~	They get accounts closed and money held, and the account follows the real identity. ◆

PART 05

Access is never part of the game

A real dom never needs your password. Passwords and one-time codes are keys to your identity, and a promise doesn't protect you. ◆ A US cybersecurity alert advises people not to hand control of a computer or phone to a stranger. ◆ A remote-access vendor states that it does not offer remote support services, so a caller claiming to be its support isn't genuine. ◆

In this scene the same request shows up inside the game. Press reports describe some doms blackmailing subs. ◆ A first-person account says threats of exposure are a common punishment from financial doms. ◆ A login handed over as a gesture of trust is really about control, and a fake dom would ask for exactly the same thing. ◆

V

VIVIAN'S FIELD NOTES

I track how these requests are worded. The language of trust and the language of a scam overlap completely. When someone says a password proves you're serious, the request itself is the red flag, whatever they mean by it. A dom who means well doesn't need your password, and one who doesn't will say the same words.

◆

RED FLAGS

Access requests

- A dom asks for your password as proof you're honest.
- A dom asks for the one-time code just sent to your phone or e-mail.
- A dom asks for a remote desktop session "to supervise", and adds that you can always quit.
- A dom logs you out of your own accounts, or keeps them open "for you".
- A dom asks for access as the price of forgiveness.

Counter. Say no once, calmly. Offer a screenshot or an export instead. If you already shared anything, change the password and sign out of every session. Don't argue.

Pressure around privacy

WHAT THEY SAY OR DO

01 *"Prove you are honest: give me your login."*

THE COUNTER

A login proves nothing and opens everything. Refuse and show a screenshot instead. ◆

WHAT THEY SAY OR DO

02 *"Why would you want to do this alone?"*

THE COUNTER

Asking you to justify your privacy makes you defend a normal boundary. Say it once: "because I want to" is enough. ◆

WHAT THEY SAY OR DO

03 *"I only want access because I care."*

THE COUNTER

Wanting into someone's account because it feels special is a control pattern. Say no. ◆

WHAT THEY SAY OR DO

04 *"That dom is not who she says she is. Leave her."*

THE COUNTER

Exposing someone to win you over isolates you. Ask why her identity is the argument. ◆

It works the other way too. Giving anyone, even a mentor you trust, full access to the account where your subs talk is risky. The subs can't speak freely, and the helper can step into conversations. If you share access, tell the subs, exclude specific conversations, and remove the helper's sessions when trust drops. ◆

TRY IT

A dom asks for a code

You sent a tribute and told a dom you also pay others. She says you can prove you're honest by reading out the code that just came by text, and promises she won't do anything harmful. What do you do?

A Refuse, offer a screenshot, and change your passwords if you shared anything before

The right answer. Right. A code opens your account to whoever has it. A promise doesn't protect you.

B Read the code, since she promised not to do anything harmful

Not this one. You can't check the promise, and you can't take the code back.

C Give her your password instead of the code

Not this one. A password is the bigger key. The same rule applies.

PART 06

When it leaks

Rumours and screenshots travel fast. A rumour that a dom is secretly a sub can cost her subs, and private images can spread through a shared server before any apology comes. ◆ Keep private images and chats out of any shared space.

If your identity leaks

1. Stop. Don’t confirm or deny any real-life detail.
2. Secure your accounts: change passwords and sign out of every session.
3. Save proof with dates before you block anyone.
4. Report the account to the platform. Don’t pay a blackmailer, and don’t send more material.
5. Tell one person you trust, and read Where to get help.

Never hand over

Password

Never. A real dom never needs it.

One-time code

Never. It opens your account.

Address

Not without a neutral forwarding service.

Card number

Never. The card stays with the processor.

TRY IT

Check yourself

QUESTION 1 OF 2

Where does anonymity end for a dom?

- ◯ At the bio
- ◯ At the payout
- ◯ At the first post

Answer. At the payout. A processor ties the persona to a legal identity.

QUESTION 2 OF 2

A dom says you need a reason for your privacy. What is that?

- ◯ A fair question
- ◯ A pressure pattern
- ◯ A required form

Answer. A pressure pattern. A boundary needs no proof.

REMEMBER IT

- Only the persona’s name goes in anything you produce.
- Clean every file, then check it.
- Public fields and game names connect accounts.
- Anonymity ends at the payout.
- A real dom never needs your password or a code.
- If it leaks, stop, secure, keep proof and ask for help.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 It works well toward the audience: a drawn face can’t leak, a clean file carries no coordinates, and an account under a pseudonym shows no name.

◆

02 Compared with classic findom, the drawn character takes the face and the voice out of the deal, and the risk moves to payment platforms, social platforms and the tools used to move money.

◆

03 Those threats are scary even when the pictures are known to be fake.

◆

04 A drawn character has no real face to fake, and that’s real protection.

◆

05 In a study of findommes, participants named secrecy among the most negative parts of the work.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Archive (http://web.archive.org/web/20261016030740/https://pmc.ncbi.nlm.nih.gov/articles/PMC8418458/)

Accessed 3 November 2026

06 There’s no study behind it.

◆

07 Never a personal name, an e-mail address or a system path that contains a user name.

◆

08 Videos carry a date, the name of the program and the name of the encoder.

◆

09 Clean every export, then reread the file, and if anything’s left, don’t post it.

◆

10 Clean even when you start clean, because an encoder can add a profile on its own.

◆

11 Test your checker with odd cases, because a hidden note in an unexpected spot once slipped through mine.

◆

12 Treat every picture as copyable too, since anyone can take a screenshot.

◆

13 Serve everything from the site's own host, with no third-party fonts, trackers or scripts, so only the host sees a visit.

◆

14 Check it from the outside: old versions of a site can stay reachable at hosting addresses you've forgotten.

◆

15 Browser safety filters can flag new adult-themed domains early, so test the name and keep a backup.

◆

16 Make commits under the persona's name and in UTC, because a local time offset shows where the author lives.

◆

17 Open a code-hosting account with a pseudonym for both the name and the e-mail, because every change stays in the history.

◆

18 Before you give a tool to others, take out any name, signature and default picture, and strip the source, comments and leftover handles, or someone can repackage it with something added.

◆

19 Type a token or key into a masked prompt in your own terminal, never into a commit, screenshot or message, and send access keys privately so they can be revoked.

◆

20 Check what it sends and to whom, check its defaults as well as its screen, and test it in a virtual machine with no personal network.

◆

21 Don’t run an unknown program on your main computer.

◆

22 Avoid any tool that builds an ID from the computer name or the account name.

◆

23 A safer design starts with everything off, a whitelist, a random ID, a short history and a control channel by invitation only.

◆

24 The platform and the host still have the data.

◆

25 One careless bio line on a related account can show that the person behind a persona isn’t who the persona says.

◆

26 A game or stream name that looks like the persona’s name, or points back to an old dispute, can do the same.

◆

27 Platform terms may forbid multiple accounts, or a new account after a ban, and a second account puts the first one at risk.

◆

28 It drags a person who has nothing to do with this into adult activity.

◆

29 When someone asks about a persona's contacts or second identities, deflect.

◆

30 Never publicly link a handle you found in a tool's files to a persona unless the person said so in their own words, because that's doxxing.

◆

31 Exposing a bad actor also invites revenge, like mass reports from accounts the rival controls.

◆

32 If you show a mentor or a peer anything, show the persona account, never the personal one.

◆

33 Purging messages and blocking contacts keeps the persona apart from the person, but it also wipes out what you could learn from.

◆

34 Use a handle you're fine with several doms seeing.

◆

35 Keep a separate account for adult servers, and check who else is in a server before you join, because a server you have in common with someone can expose you.

◆

36 On a shared computer, lock the screen or close the chat, and use a separate profile.

◆

37 A dom who needs them isn't playing a game.

◆

38 Physical gifts break anonymity both ways, so the safe default is no addresses at all, or a neutral forwarding or retail service.

◆

39 In my experience a card processor or an adult payment company ties the persona to a legal identity: ID documents, a business registration and a bank account in the company's country.

◆

40 An account opened in a real name carries any ban with it, and the ban follows the real person.

◆

41 The persona is a mask toward the audience and the platforms, never toward the company that pays you.

◆

42 They get accounts closed and money held, and a sub's payment can disappear with them.

◆

43 The authors of a study of findommes flag fraud, including identity fraud, as a remaining risk in this field.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Accessed 3 November 2026

53 A login handed over as a gesture of trust is really about control, and a fake dom would ask for exactly the same thing.

◆

54 I track how these requests are worded. The language of trust and the language of a scam overlap completely. When someone says a password proves you're serious, the request itself is the red flag, whatever they mean by it. A dom who means well doesn't need your password, and one who doesn't will say the same words.

◆

55 Refuse and show a screenshot instead.

◆

56 Say it once: "because I want to" is enough.

◆

57 Say no.

◆

58 Ask why her identity is the argument.

◆

59 If you share access, tell the subs, exclude specific conversations, and remove the helper's sessions when trust drops.

◆

60 A rumour that a dom is secretly a sub can cost her subs, and private images can spread through a shared server before any apology comes.

◆

Getting paid

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

A drawn persona hides a face, but the payout still has your name on it. Here's how the money moves, what each platform's own terms say as of 2026-11-03, why disguising adult payments fails, and how to pick a payment route, share money and plan for fees and tax.

EVIDENCE ◆ Verified ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A persona gets paid through a few payment routes, and each one asks who's behind the character.

02 Platform rules on adult content, gifts and fees change. Read the page itself, with its date.

03 Disguising an adult payment from a processor fails, and the frozen balance holds the sub's money too.

04 Pick a payment route by asking the provider in writing, and keep a second page ready.

05 Fees come off first, tax comes after, and a cut of the gross weighs more than it looks.

YOU WILL LEARN

- ✓ Which payment routes carry a persona's money and what each one asks of you.
- ✓ What five platforms say in their own words, as of 2026-11-03.
- ✓ Why a disguised payment page hurts the dom and the sub.
- ✓ How to pick a payment route with one written question and one sum.
- ✓ How to share money with a partner or another dom without surprises.

> *Every route that carries my money can close. I treat each one as something I could lose any day, and I tell each one the truth about what I do.*
>
> — VIVIAN

PART 01

Where the money passes

A persona gets paid through a handful of payment routes, each with its own job. A subscription site carries content, a support site carries tiers, and a gift wishlist carries tributes. No single route should carry the whole business.

◆ The person paying only sees the character, but the payment route sees the person behind her. See Stay anonymous for the same point from the privacy side.

The payment routes and what they ask

	Used for	What it asks of you	Main risk
Gift wishlist	Tributes and sends	Contact details, then ID before payout	Rules on what counts as a gift, a closed account
Subscription site	Content behind a paywall	ID papers, age checks	Content rules, a high platform fee
Support or tip page	Tiers, small tips	Age attestation, processor rules	Bans on pornography, findom named as not allowed
Own site with a card processor	Your own page or shop	Business registration, ID	Adult goods refused, frozen balance
Crypto link	An extra route	A wallet, tax records	No refunds, a cash-out that asks who you are

In my experience, a few subs send most of the money. A business that lives on one person's spending has a reason to keep him spending, and that's the pull to watch for in yourself. ◆

PART 02

What the platforms say, as of 2026-11-03

These are summaries of each platform's own help or terms page, and none of it is legal advice. The pages change, and some only say they were updated this week. ◆ Read the page itself before you build on any line here.

Gift wishlists. In my experience, Throne is the gift wishlist platform most of this scene uses. ◆ Throne says creators pay no checkout fees and fans pay at checkout. ◆ It lists a 7 percent service fee on physical gifts it ships and 9.75 percent on Cash Gifts, Direct Credit and Payout items. ◆ It lists a USD 2.00 fee on creator withdrawals under USD 30.00. ◆

At sign-up, a creator gives a name, full address, phone number and email address. ◆ Throne asks creators to verify their identity before they withdraw funds. ◆ So anonymity toward the audience ends at the payout.

On content, Throne says it welcomes adult creators within limits. ◆ Suggestive but not explicit content is allowed. ◆ Explicit sexual acts are not allowed in any format. ◆ The rules apply equally to real photos and to drawn or animated art. ◆ Its terms also prohibit pornographic or explicit user-generated content. ◆ Its list of disallowed fetish content names BDSM scenes focused on pain, domination or humiliation, and the page doesn't mention financial domination. ◆ So it's unclear where findom stands. Ask the platform in writing. ◆

On gifts, everything on a wishlist must be a gift. ◆ Profile text may not offer content or services in exchange for gifts through Throne. ◆ Cash Gifts have to

be tied to a real physical product. ◆ Breaking these rules can lead to removed items or account suspension. ◆ That matches the first rule of the scene: a tribute buys nothing. See What is 2DFD?.

Subscription sites. OnlyFans asks a creator for a valid ID and identity verification. ◆ It takes 20 percent of each user payment for creator interactions. ◆ The terms of other subscription sites, Fansly among them, weren't read for this wiki, so it makes no claim about them.

Support sites with tiers. Patreon states a 10 percent platform fee on income, plus processing, conversion and payout fees. ◆ It restricts adult works to paying members who attested that they are over 18. ◆ Adult creators complete an age attestation to comply with payment processor requirements. ◆

Tip pages and card services. Ko-fi names findom themes among the high-risk fetish content it does not allow. ◆ It also says creators must stick to the rules set by PayPal and Stripe. ◆ On its free tier, Ko-fi charges 0 percent on one-time tips. ◆ PayPal does not allow sexually oriented digital goods or content, including downloadable pictures, videos and website subscriptions. ◆

V

VIVIAN'S FIELD NOTES

I describe items plainly, within the platform's content rules, and I read those rules before I list anything. ◆ A page that promises more than it offers gets closed faster.

◆

For any payment idea, the limit is the payment company. Code can't get around it. ◆

PART 03

Don't disguise what you do

Several large processors and shop platforms forbid adult goods or services. ◆ PayPal, as shown above, is one. Talk in the scene often turns to making a payment page look ordinary to a reviewer. This wiki doesn't describe those designs, because they all fail for the same reason: they rely on a reviewer who never looks closer.

Processors look at who runs the account and what the audience pays for, as well as at the page. ◆ The usual result of a disguise is a closed account and a frozen balance, tied to a real identity. ◆ A page that says one thing while something else goes on is misrepresentation, and misrepresentation is what gets accounts closed. The answer is plain: use the normal route. ◆

The sub pays for this too. Money he sent sits in the frozen balance, and he gets nothing for it. ◆

MYTH	FACT
~~A processor only cares what the page sells, not what happens around it.~~	Providers also look at who runs the account and what the audience pays for. ◆
MYTH	FACT
~~If an account closes, I'll just open another one.~~	At least one gift platform, Throne, asks creators to verify their identity before they withdraw funds. ◆ A new account would then face the same check. ◆

RED FLAGS

Payment requests a sub should refuse

- A card number, a security code or a bank login typed into a chat.
- A one-time code sent “to confirm” a payment.
- A remote session offered “to help you pay”.
- A payment link sent by message that isn’t on the persona’s own page.
- A sudden new account or method, because “the old one was blocked”.

Counter. Pay only through the route named on the persona’s own page, and check that page yourself. If it’s down, wait. Nobody loses a game by waiting, and a real dom never needs your card details, your codes or your screen. ◆

PART 04

Choosing a payment route and keeping a way out

Commission-only platforms are the realistic start for a small creator. Dedicated adult payment companies exist. They ask for ID documents, a registered business form, a matching bank account and fixed yearly costs, and

their own pages give the current terms. At small volumes the fixed costs alone can be more than you earn.

Choose a payment route

1. Write down what you receive, per month or per year.
2. Read the provider's own list of prohibited businesses and its terms. Keep a dated copy.
3. Write to the provider yourself. Ask in plain words whether a character-led adult persona is accepted, and ask about category, fees, any reserve, tax handling, payout currency and using a pseudonym on the public side.
4. Do the sum. A commission-only platform takes more per payment and nothing fixed. With made-up figures, a fixed cost of USD 1,500.00 a year and a commission 10 points lower break even against the platform at USD 15,000.00 of yearly sales.
5. Decide only after a written answer. A vague answer counts as a no.

Doms spread income across a gift platform, a page on their own site and crypto links. A page you run yourself that lists items and sends each one to the gift platform or to a crypto address stays editable and needs no card processor. A card processor on your own site brings back the processor risk above. Crypto gets around a card processor's list, but not tax. There are no refunds, and turning coins into money you can spend usually goes through a service that asks who you are.

Plan for a payment route that disappears. Gift and payment sites for adult creators have closed, or lost a processor, without warning. ◆ No single case is cited here, and there's no count of how often it happens. Keep a backup page, keep your public hub up to date, and never let subs assume an old link still works. ◆ See Breaks that hold for the sub's side of a closed route.

PART 05

Sharing money, partners and wrong sends

Passing a wrong send on only costs fees, and a dom who forwards it right away and says so earns trust. ◆

TRY IT

A tribute arrives for someone else

A sub writes that he meant to send to another persona and used your page by mistake. On paper the gift is yours.

A Forward it to the persona he meant, and tell him you did.

The right answer. It costs a small fee and keeps your word good. Trust is worth more than one send.

B Keep it and thank him warmly.

Not this one. A tribute buys nothing, but a mistaken one isn't a tribute to you. Keeping it is what a dom you can't trust does.

C Ask him to send the same again to sort out the confusion.

Not this one. That turns his mistake into a second payment. Never ask for more because of an error.

When two doms share a sub's money, or a dom pays a partner who builds tools, write the split in numbers before any work starts. A sub isn't a flow of money to pass between doms, and his consent is easy to lose. If he builds for you without pay, the scope is his to choose, he can say no without losing his place, and he gets thanked. ◆

A percentage of the gross costs more than it looks. Say fees and tax leave you 60 percent of each payment. A 15 percent cut of the gross is then 25 percent of what you keep. Fixed monthly pay puts pressure on you to earn more than it costs. ◆

PART 06

Fees, tax and costs

Costs come before income: image and video generation, tools, hosting and the time it takes to make them. Budget tools against income you already have, so no single sub's sends are needed to pay for them. ◆ The big figures people trade in the scene are hearsay, and this wiki prints none as typical. ◆

In general, money a persona gets for her work is likely to count as income where you live, and the platform's payout isn't the end of the sum. ◆ Fees come off first, then tax, and sometimes sales tax or VAT on digital sales. ◆ Rules differ by country. Ask your tax authority or a tax adviser. This chapter gives no advice.

V

VIVIAN'S FIELD NOTES

I keep a reserve I never touch before I spend on extras, and I raise it in steps as the income grows. ◆ When a sub says money is short, I stop the money part of that evening. I can't be his safety net, because I'm the one being paid, and that's a conflict of interest. See When a sub is in trouble and Pressure tactics, both ways.

TRY IT

Check yourself

QUESTION 1 OF 2

A wishlist platform checks identity before a creator withdraws. What does that mean for a persona?

- ◯ The persona stays anonymous toward the payout
- ◯ Anonymity toward the audience ends where the money lands
- ◯ The check only applies to subs

Answer. Anonymity toward the audience ends where the money lands. Platforms tie payouts to a real identity, so plan for it from the start.

QUESTION 2 OF 2

What's the safest way to choose a payment route?

- ◯ Copy what a bigger persona uses
- ◯ Pick the cheapest and describe what you do vaguely
- ◯ Ask the provider in writing, tell the truth and keep the answer

Answer. Ask the provider in writing, tell the truth and keep the answer. A written answer to a plain question is the only proof you'll have if the route closes.

REMEMBER IT

- A drawn face hides a face. The payout still has your identity on it.
- Read each platform's own page, with its date, before you build on it.
- Never disguise an adult payment. A frozen balance freezes the sub's money too.
- Ask the provider in writing, do the sum and keep a backup page.
- Write splits in numbers first, and remember that fees and tax shrink the gross.

32 I describe items plainly, within the platform's content rules, and I read those rules before I list anything.

◆

33 A page that promises more than it offers gets closed faster.

◆

34 Code can't get around it.

◆

35 Several large processors and shop platforms forbid adult goods or services.

◆

36 Processors look at who runs the account and what the audience pays for, as well as at the page.

◆

37 The usual result of a disguise is a closed account and a frozen balance, tied to a real identity.

◆

38 A page that says one thing while something else goes on is misrepresentation, and misrepresentation is what gets accounts closed.

39 The answer is plain: use the normal route.

40 Money he sent sits in the frozen balance, and he gets nothing for it.

41 Providers also look at who runs the account and what the audience pays for.

42 At least one gift platform, Throne, asks creators to verify their identity before they withdraw funds.

Why am I being asked to verify my identity? (https://help.throne.com/en/articles/15861681-why-am-i-being-asked-to-verify-my-identity)

Archive (http://web.archive.org/web/20261018140233/https://help.throne.com/en/articles/15861681-why-am-i-being-asked-to-verify-my-identity)

Accessed 3 November 2026

43 A new account would then face the same check.

44 Nobody loses a game by waiting, and a real dom never needs your card details, your codes or your screen.

45 Commission-only platforms are the realistic start for a small creator.

46 They ask for ID documents, a registered business form, a matching bank account and fixed yearly costs, and their own pages give the current terms.

47 At small volumes the fixed costs alone can be more than you earn.

◆

48 Doms spread income across a gift platform, a page on their own site and crypto links.

◆

49 A page you run yourself that lists items and sends each one to the gift platform or to a crypto address stays editable and needs no card processor.

◆

50 A card processor on your own site brings back the processor risk above.

◆

51 There are no refunds, and turning coins into money you can spend usually goes through a service that asks who you are.

◆

52 Gift and payment sites for adult creators have closed, or lost a processor, without warning.

◆

53 Keep a backup page, keep your public hub up to date, and never let subs assume an old link still works.

◆

54 Passing a wrong send on only costs fees, and a dom who forwards it right away and says so earns trust.

◆

55 When two doms share a sub's money, or a dom pays a partner who builds tools, write the split in numbers before any work starts.

◆

56 A sub isn't a flow of money to pass between doms, and his consent is easy to lose.

◆

57 If he builds for you without pay, the scope is his to choose, he can say no without losing his place, and he gets thanked.

◆

58 Fixed monthly pay puts pressure on you to earn more than it costs.

◆

59 Costs come before income: image and video generation, tools, hosting and the time it takes to make them.

◆

60 Budget tools against income you already have, so no single sub's sends are needed to pay for them.

◆

61 The big figures people trade in the scene are hearsay, and this wiki prints none as typical.

◆

62 In general, money a persona gets for her work is likely to count as income where you live, and the platform's payout isn't the end of the sum.

◆

63 Fees come off first, then tax, and sometimes sales tax or VAT on digital sales.

◆

64 I keep a reserve I never touch before I spend on extras, and I raise it in steps as the income grows.

◆

Posting and workflows

LAST CHECKED 3 NOVEMBER 2026 • 10 MINUTES TO READ

Posting decides less than people hope. This chapter covers marking adult media on X, spreading the risk across accounts, a rhythm you can keep, and the pressure tricks to spot as a reader.

EVIDENCE ◆ Verified ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Reach depends more on the account and the platform than on how good one post is.

02 X allows labelled adult content from drawn and generated characters too, so mark each post that needs it.

03 Give every account one job, and never let the persona depend on a single account.

04 Keep a rhythm you can hold. One you resent won't last.

05 Some captions and promotions are written to push. Read them as the person they're aimed at.

YOU WILL LEARN

- ✓ Why one post tells you almost nothing about your account.

- ✓ What X actually writes about adult media, and what's only scene folklore.
- ✓ How to split a persona across accounts without making a mess.
- ✓ How to run a launch, a collab or a themed month.
- ✓ Which posts and promotions are built to push a reader, and how to answer them.

> *A careful post can vanish and a careless one can travel, and nobody can tell you which in advance. What you control is how you mark your work, how you spread the risk and how you keep going without the feed taking over your week.*
>
> — VIVIAN

PART 01

One post tells you almost nothing

Reach depends on the account and the platform more than on the post. In my experience a weaker post from an account the algorithm favours can get many times the views of a careful post from one it ignores. Hours of editing predict nothing: a long intro can flop while a plain picture with one word travels. One post tells you almost nothing, and its first fifteen minutes tell you even less. Look at several posts before you judge an account, and don't take a slow start as a verdict on your talent. ◆

A post that travels says nothing about the person behind it either. Lots of views don't make a persona someone you can trust. ◆

Folklore. The scene repeats a lot of rules about reach. They're listed here as folklore, so you can recognise them and weigh them yourself. ◆

- A brand-new account gets pushed hard at first, so a fresh account is the best place for a launch. Repeated a lot, never measured. ◆
- An account is healthy only if one post has reached a few hundred likes without a label. That comes from one creator’s habit, and there’s no published figure. ◆
- Posting very regularly and repetitively looks like a bot and hurts reach. Someone’s guess, never tested. ◆
- Keep links out of the bio, never tag anyone and post once a day to be favoured. Other creators disagree. ◆
- The picture and the caption together decide about 40 percent of how a post does. A guess with no data behind it. ◆

V

VIVIAN’S FIELD NOTES

When my reach drops, I check the labels and the settings first, then I look at several posts, then I check whether other creators saw the same drop. If they did, it’s the platform. If only I did, it’s my account.

◆

PART 02

Marking adult posts on X

X allows adult nudity and sexual behaviour that was produced consensually, as long as it’s properly labelled and not prominently displayed, as of 2026-11-03. ◆ The same rule covers animated and AI-generated content, cartoons,

hentai and anime included, so a drawn persona gets no exemption. ◆ Adult content isn't allowed in live video, profile pictures, headers, List banners or Community cover photos. ◆ The labels are there so that people under 18 don't run into it. ◆

X gives you two tools, as of 2026-11-03. You can set your account to mark everything it posts as possibly sensitive. ◆ Or you can put a one-time warning on a single photo or video: Nudity, Violence or Sensitive. ◆ X also says it may use automated techniques to detect and label sensitive media, so your own marking isn't the only label a post can get. ◆ If an account keeps mislabelling its media, X may label it for you, and an offending profile or header image can get you a temporary suspension. ◆

Consent is a separate rule. X bans content that sexualizes or exposes an identifiable real adult without explicit consent, and the rule names AI-generated and manipulated media. ◆ If your persona uses a real person's face or voice, you need that person's agreement.

What X doesn't publish is the part creators worry about: what makes the classifier fire. When I measured it on my own pictures, the triggers were sheer or wet clothing, bodily fluids in a sexual setting and implied arousal, and bare skin alone didn't get a label. ◆ Other creators swear by other triggers, like any visible rear, and that stays folklore until X writes it down. ◆ The classifier is also erratic. A mild image can get labelled, a fresh post can lose its label a few minutes later, and there's nobody to appeal to in the moment. ◆

Marking costs reach. Not marking costs more. A marked post is expected to get pushed less. An unmarked adult post risks reports, and in the scene a single report has locked an account until an appeal was answered. ◆ So plan around reports, and not only around reach. Some creators leave the account-wide setting off and mark only the posts that need it. There's no data on whether either choice changes reach. ◆

Before an adult post goes out

1. Decide when you export whether the post needs a warning, and mark it yourself if it does.
2. Keep every character an adult, with nothing child-like in her look or setting, whatever the lore says.
3. Leave out any real person who hasn't consented.
4. Keep adult material out of the avatar, the header and any banner.
5. Label what needs a label. Don't tweak pictures to slip under the classifier.

PART 03

Spread the risk across accounts

A persona that lives on one account can lose everything at once. Platforms close, freeze and restrict accounts, and a restricted account can lose most of its reach for weeks. The scene calls a search suggestion ban an SSB: the account stops showing up in search suggestions. Many creators keep a backup account ready. A backup account is there so you can carry on when a platform closes your account for a reason that isn't a ban on you. Opening a new account to get round a ban breaks platform terms. ◆

This wiki doesn't explain how to get around a suspension or a restriction. Read the platform rules before you open another account, and see Stay anonymous for the identity side.

X doesn't require a real identity on a profile, so a pseudonymous persona is allowed, as of 2026-11-03. ◆ Its fake-persona rule targets made-up identities

used to deceive people, so read it before you decide how you present your persona's biography.

A common set-up gives each account one job.

One account or several

	Job	Main risk	Avoid
Main	Reach and the way into the community	Restriction or closure	Putting every launch there first
Archive	Older content and series	Looking abandoned	Treating it as the account that grows
Test	Trying a kind of content before the main account does	Almost no reach at first	Judging a big teaser by it
Send account	Handling sends, kept separate	Getting mixed up with growth work	Growing it in public

Some creators spread a themed evening across accounts, one post an hour for about six hours, and compare how the same kind of content does before they use the main account. Big announcements go where the audience already is, because a new account has almost no audience.

PART 04

A rhythm you can keep

In the scene the usual aim is a post a day. Skipping a day or two is fine as long as the next post comes, and forcing output when you're low gets you nowhere. After a quiet stretch, come back with something striking instead of more noise. Post at the hour that suits your audience's evening, whatever your own clock says. Video is an occasional highlight, because a clip costs far more to make than a still.

V

VIVIAN'S FIELD NOTES

For me, two days without a post is a lapse. It reminds me to make new images and new text. It's never a reason to post something weak.

Replies are part of the rhythm. A slow answer to a private message costs you a session, and the pile of replies after a post is one of the biggest time costs of running a persona. Views aren't sends, and a few good subs are worth more than a big audience.

Posting is a chore, even for experienced creators, and comparing yourself to the feed makes it worse. Three things help. Read the timeline from a separate account that isn't your findom account. Keep active projects to one or two. Step away from the social accounts for a few days when you're burnt out. ◆

PART 05

Edits, captions and launches

Captions. A caption has to say one clear thing. If it contradicts itself, or needs a paragraph to explain its visual metaphor, a fresh reader rejects it, so show it to someone outside before you post. An image alone is weak without words, and a picture the audience has already seen is weaker still. Captions written by a machine tend to feel flat. Write two or three sentences yourself and let a tool polish them. A promo image with too much text overloads the reader. A clean picture with the name and one call to click reads best. ◆

Files. An export can leak more than the picture. GPS data, provenance records and generation prompts can travel inside a file, and a browser encoder may add a colour profile by itself. The 2DFD editor, made by Vivian, is designed to strip this data, read the file again and refuse the export if anything is left. That's what it's designed to do. It doesn't certify that it always does it. A teaser and a full version can be exported as a pair, the teaser censored for the public feed, with the same loop length. ◆

For a hypno edit, the accessibility guidelines set the limit at three flashes in any one second, unless the flash is below the stated thresholds. ◆ Staying under it doesn't make a loop safe for everyone, so warn first and offer a calm version. The point where the loop restarts counts toward the limit. ◆ See Hypno and edits.

Export check

1. Clean the metadata, then read the file again to check.
2. Look at generated pictures for stray text and anatomy glitches.
3. Export the teaser and the full version as a pair.
4. Count the flashes in any loop, including the point where it restarts.
5. Preview it at feed size, after the platform has recompressed it.

Launching a tool. Ship a decent first version and post about it. Say plainly what it does, what it costs and how to stop it. If it flops, post again, because a flop doesn't mean the tool is bad, and public updates like v2 and v3 build interest. Have a promo picture ready. One image is enough for a familiar kind of tool, and an original one deserves a short video or a page. Don't link to a site that isn't ready. ◆ See Techdom for what the tools do.

PART 06

Events, collabs and the pressure to watch for

A themed month needs a written plan, per day and per account, before it starts. ◆

A month-long event plan

1. **Weeks before**

   Write the theme, the daily text and the image for each day and each account.

2. **Launch**

   Open on a weekend, and add any link that isn't ready later.

3. **Each day**

   At least one post per account, at a different hour on each.

4. **Each week**

   One release or one feature a week, never one a day, because each one needs time to spread.

5. **End**

   Close it and tell the audience it's over.

A collab can be cheap. Each persona makes a short loop of about ten seconds, and the two are joined into a duo video that both of you post. A reply or a quote from a bigger account can multiply the views of a smaller one, so put the terms of swaps and retweet games in writing. In a collab, you don't use the other dom's private material or lore unless she agrees in writing. Custom emotes and stickers can brand a server. Discord doesn't allow sexually explicit content anywhere that can't be age-restricted, such as avatars, bios, banners, emoji and stickers, as of 2026-11-03.

Posting is where readers first meet a persona, and some posts are built to push them. A sub who knows how these posts are built is harder to push.

Posts and promotions that push, and the counter

WHAT THEY SAY OR DO

01 *A caption that enjoys a falling balance, says the choice is already gone and ends with an order to empty the account*

THE COUNTER

It's a hook written for the feed to imitate compulsion. It describes the persona and says nothing about you. Close the app, check your limit, and read The spiral if the wording felt true. ◆

WHAT THEY SAY OR DO

02 *A leisure scene paid for with the viewers' lunch, fuel or rent money*

THE COUNTER

It ties her comfort to your real expenses. It's theatre, and your lunch money is still yours. ◆

WHAT THEY SAY OR DO

03 *A launch prize for the first people who send proof of spending*

THE COUNTER

It pulls spending into the public feed and rewards the people most likely to overspend. No prize changes your limit. ◆

WHAT THEY SAY OR DO

04 *A post that shows a send landing, a balance or a ranking*

THE COUNTER

Staged proof exists, and you can't check a post. Treat it as advertising. See Spot a fake dom. ◆

WHAT THEY SAY OR DO

05 *A prefilled-post link, especially a shortened one*

THE COUNTER

A shortened link hides where it goes. Check the destination and read the text before it goes out under your name. ◆

WHAT THEY SAY OR DO

06 *A private message from a persona soon after you liked a post*

THE COUNTER

Messaging people who already engage is a standard way to turn views into sends. A message doesn't oblige you to anything, and you can say no. ◆

More pressure designs are in Pressure tactics, both ways.

On the dom side, the same rule works the other way. A sub may offer to be content. Share nothing that could identify him, and only with his real agreement, because humiliation content about a real person can follow him. If you're not sure, don't post it. ◆

TRY IT

Your account lost reach after a week

You posted as usual and the views dropped to a fraction. You don't know why. What do you do first?

A Check the labels and the settings, then look at several posts before deciding

The right answer. Right. A label or a setting is the easiest cause to find, and one week of data isn't much.

B Open a new account tonight and move everything

Not this one. Too early. You haven't found the cause, and a persona on one account is still the problem.

C Post five times a day until it recovers

Not this one. Posting more doesn't fix a label or a restriction.

D Change the character, since she's the problem

Not this one. Nothing shows that the character decides reach.

TRY IT

Check yourself

QUESTION 1 OF 3

A drawn persona posts a sheer, wet-clothing image. What does X's adult content page say about drawn characters?

- ◯ They're exempt
- ◯ The adult content rules apply to animated and AI-generated content too
- ◯ They have to be posted on a separate platform

Answer. The adult content rules apply to animated and AI-generated content too. The rules cover cartoons, hentai, anime and AI-generated content. ◆

QUESTION 2 OF 3

Where must adult material never go on X?

- ◯ Profile pictures, headers, List banners and live video
- ◯ The post text
- ◯ A direct message

Answer. Profile pictures, headers, List banners and live video. X lists live video, profile pictures, headers, List banners and Community cover photos. ◆

QUESTION 3 OF 3

A post claims to show a sub sending the maximum. What is it?

- ◯ Proof
- ◯ Advertising you can't check
- ◯ A reason to send the same

Answer. Advertising you can't check. Staged proof exists, and a screenshot proves nothing about the person behind the persona.

REMEMBER IT

- One post tells you almost nothing. Look at several.
- Mark adult posts yourself, keep adult material out of avatars and banners, and expect the classifier to be erratic.
- Folk rules about reach are folklore until the platform writes them down.
- Give every account one job, and never let the persona live on one account.
- Captions that imitate compulsion and promotions that reward proof of spending are built to push. Close the app and check your limit.

SOURCES AND EVIDENCE

Check it

22 When I measured it on my own pictures, the triggers were sheer or wet clothing, bodily fluids in a sexual setting and implied arousal, and bare skin alone didn't get a label.

23 Other creators swear by other triggers, like any visible rear, and that stays folklore until X writes it down.

24 A mild image can get labelled, a fresh post can lose its label a few minutes later, and there's nobody to appeal to in the moment.

25 A marked post is expected to get pushed less.

26 An unmarked adult post risks reports, and in the scene a single report has locked an account until an appeal was answered.

27 There's no data on whether either choice changes reach.

28 Platforms close, freeze and restrict accounts, and a restricted account can lose most of its reach for weeks.

29 The scene calls a search suggestion ban an SSB: the account stops showing up in search suggestions.

30 Many creators keep a backup account ready.

31 A backup account is there so you can carry on when a platform closes your account for a reason that isn't a ban on you.

◆

32 Opening a new account to get round a ban breaks platform terms.

◆

33 X doesn't require a real identity on a profile, so a pseudonymous persona is allowed, as of 2026-11-03.

◆

Authenticity (includes the Synthetic and Manipulated Media rules; the old manipulated-media help URL now redirects here) (https://help.x.com/en/rules-and-policies/authenticity)

Accessed 3 November 2026

35 A common set-up gives each account one job.

◆

36 Some creators spread a themed evening across accounts, one post an hour for about six hours, and compare how the same kind of content does before they use the main account.

◆

37 Big announcements go where the audience already is, because a new account has almost no audience.

◆

38 Skipping a day or two is fine as long as the next post comes, and forcing output when you're low gets you nowhere.

◆

39 After a quiet stretch, come back with something striking instead of more noise.

◆

40 Post at the hour that suits your audience's evening, whatever your own clock says.

◆

41 Video is an occasional highlight, because a clip costs far more to make than a still.

◆

42 For me, two days without a post is a lapse. It reminds me to make new images and new text. It's never a reason to post something weak.

◆

43 A slow answer to a private message costs you a session, and the pile of replies after a post is one of the biggest time costs of running a persona.

◆

44 Views aren't sends, and a few good subs are worth more than a big audience.

◆

45 Posting is a chore, even for experienced creators, and comparing yourself to the feed makes it worse.

◆

46 Step away from the social accounts for a few days when you're burnt out.

◆

47 If it contradicts itself, or needs a paragraph to explain its visual metaphor, a fresh reader rejects it, so show it to someone outside before you post.

◆

48 An image alone is weak without words, and a picture the audience has already seen is weaker still.

◆

49 Write two or three sentences yourself and let a tool polish them.

◆

50 A clean picture with the name and one call to click reads best.

◆

51 GPS data, provenance records and generation prompts can travel inside a file, and a browser encoder may add a colour profile by itself.

◆

52 The 2DFD editor, made by Vivian, is designed to strip this data, read the file again and refuse the export if anything is left.

◆

53 A teaser and a full version can be exported as a pair, the teaser censored for the public feed, with the same loop length.

◆

54 For a hypno edit, the accessibility guidelines set the limit at three flashes in any one second, unless the flash is below the stated thresholds.

◆

Web Content Accessibility Guidelines (WCAG) 2.2 (https://www.w3.org/TR/WCAG22/)

Archive (http://web.archive.org/web/20261029121709/https://www.w3.org/TR/WCAG22/)

Accessed 3 November 2026

55 Staying under it doesn’t make a loop safe for everyone, so warn first and offer a calm version.

◆

56 The point where the loop restarts counts toward the limit.

◆

57 If it flops, post again, because a flop doesn’t mean the tool is bad, and public updates like v2 and v3 build interest.

◆

58 One image is enough for a familiar kind of tool, and an original one deserves a short video or a page.

◆

59 Don’t link to a site that isn’t ready.

◆

60 A themed month needs a written plan, per day and per account, before it starts.

◆

61 Write the theme, the daily text and the image for each day and each account.

◆

62 Open on a weekend, and add any link that isn’t ready later.

◆

63 At least one post per account, at a different hour on each.

◆

64 One release or one feature a week, never one a day, because each one needs time to spread.

◆

65 Each persona makes a short loop of about ten seconds, and the two are joined into a duo video that both of you post.

66 A reply or a quote from a bigger account can multiply the views of a smaller one, so put the terms of swaps and retweet games in writing.

67 In a collab, you don't use the other dom's private material or lore unless she agrees in writing.

68 Custom emotes and stickers can brand a server.

69 Discord doesn't allow sexually explicit content anywhere that can't be age-restricted, such as avatars, bios, banners, emoji and stickers, as of 2026-11-03.

Tools and apps

LAST CHECKED 3 NOVEMBER 2026 • 11 MINUTES TO READ

A persona runs on ordinary software: editors, link pages, bots, games and, at the risky end, tools that move money. Here's what each kind is for and what to check before it touches your accounts or your subs.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Most tools around a persona are small, ordinary software. A few kinds touch money, accounts or computers, and those need the most care.

02 This chapter covers kinds of tools and names no brands, because brands and plans change within weeks.

03 Tools made by Vivian are marked as hers. They're examples, never endorsements.

04 If a tool can't show its maximum, accept a limit you set in advance and stop at once, it's a trap, however good it looks.

05 Almost every money tool is only as stable as the payment rail it rents and the person who made it.

YOU WILL LEARN

- ✓ The kinds of tools a persona uses, and what each one is for.
- ✓ What to watch with editors, generators, link pages, bots and games.
- ✓ Why money tools keep breaking, and what a safe one looks like.
- ✓ Which spending designs to recognise and refuse.
- ✓ How to work with a maker, and what to settle before the first build.

> *Everything around a persona is software somebody made, with a maker, a price and ways to fail. Before you add a tool, find out what it's for, who's behind it and how you stop it.*
>
> — VIVIAN

PART 01

The kinds of tools and what they're for

A persona uses a handful of kinds of tools, and most of them are small, ordinary software used by an audience that agreed to it. The ones that need the most care touch money, accounts or another person's computer. ◆

This chapter describes kinds and names no tool brands, because brands and plans change within weeks. ◆ Tools made by Vivian appear as examples and are marked as hers. They aren't adverts and they carry no buying link.

Kinds of tools around a persona

	What it is for	What to watch
Editors	Censored teasers, captions, cut-outs and loops for posts	Hidden data in files, flashing, licences of the parts inside
Generators for images, video and voice	Art and clips for the persona	Refusals, rights, cost, where your prompts are stored
Link pages and hubs	One place that says who she is and where to find her	Testing on phones, visitor privacy, who owns the domain
Community bots	Missions, roles and order in a chat server	Permissions, tokens, age labels on channels
Games	Short play in the persona's style, best with fictional chips	A stop that works, flash limits, the house always winning
Techdom tools	Software on the sub's side that acts for the dom	Permissions, spending limits, the payment rail, the stop
Remote-action features	One account or computer acting on another	Never part of the game

V

VIVIAN'S FIELD NOTES

My own small tools grew one at a time over a few weeks, each one answering a request somebody had just made. In my experience those are the tools that last.

◆

PART 02

Making images, edits, video and sound

Generators. Mainstream image and chat assistants often refuse adult-leaning edits, or retry in a loop and burn through your allowance. Read each provider's terms before you upload anything, and be ready to finish an image by hand in an ordinary editor. Your hardware decides what runs on your own computer: a strong graphics card gives you images in seconds, a weak one takes minutes per picture. A provider can also delete a conversation about a project it doesn't like, so keep copies of your prompts somewhere you control. ◆

Editors. The 2DFD editor, made by Vivian, is a free editor for findom posts, with censor styles, captions, cut-outs and hypno loops, and it works offline on your own computer. It's designed to refuse an export that flashes too fast and to strip hidden data from files before they leave. ◆ That's what it's designed to do. It doesn't certify that it always does it.

A photo or a video can carry hidden data about where and when it was made, so clean every file before you post it. ◆ See Stay anonymous.

Flashing. A spiral or a loop can hurt the person watching it. The web accessibility guidelines say a page must not flash more than three times in any one-second period, unless the flash is below the stated thresholds. ◆ The

guidance behind them says flashing content can cause migraines, dizziness, nausea and seizures. ◆ Devices let people ask for reduced motion, and a page can detect that request. ◆ Count the flashes in anything you make, warn before it plays and offer a calm version. ◆ See Hypno and edits.

Licences. A tool you give away may contain parts other people made: a cut-out model, a font, a sound. Check the licence of every part and ship each licence with its part. Cloning the voice of a real or licensed character in a tool you sell is a rights problem. ◆ See Art for your persona.

PART 03

Where people find you: pages, bots and posts

A hub page replaces a link-in-bio page. It says who the persona is, what she offers and how to join, and it shows a free teaser. It saves you from repeating the same answers in every message, but you still have to talk to people. ◆

Test it the way a visitor sees it: on a computer and on more than one phone, because the same layout can look different from one device to the next. Heavy effects make phones lag, banners crop differently on a phone, and cards must scroll wherever you touch them. Show the page to someone outside before launch, because the person who made it stops seeing small oddities. ◆

Visitor privacy. Fonts and scripts loaded from other companies let those companies see every visitor. If you serve everything from your own hosting, only the host sees a visit. An 18+ door at the entrance tells visitors what the site is. A click-through door doesn't check anyone's age, so word it honestly. ◆ Some places require real age checks for adult sites, so check the rule where you and your visitors live, or ask a lawyer. ◆

Domain and continuity. A static site can be hosted for free, and the domain, in my experience about USD 10.00 per year, is the only recurring cost. A new adult-themed domain may get blocked by a safe-browsing filter soon after launch, so test early and keep a backup name. A free backend tier may pause a project nobody uses and take the pages that depend on it down with it. ◆

Bots. A bot in your chat server can run missions: you create one, a member chooses to accept it and hands it in privately, and you validate or refuse it. Rewards are badges, roles and points. ◆ Discord treats sexually explicit content as age-restricted and meant for users who are 18 or older, and it keeps that content out of open areas such as profile surfaces. ◆ Give a bot only the permissions it needs, keep its token on the host, and put its role below the admin role, so a stolen token can't hand out admin. ◆

Posting. X allows consensual adult content when it's properly labelled and not prominently displayed. ◆ The rule applies to AI-generated, photographic and animated content, cartoons and anime included. ◆ Adult content isn't allowed in profile pictures or headers. ◆ A tool can remind you of this, but you have to do it yourself. See Posting and workflows.

PART 04

Games and casino play

A persona's games are short and follow one recipe: a rule everyone knows, a picture at each success, and effects that build until the player loses. The house edge means the house wins by design, and an honest game says so on its screen. ◆ See Gamedom and Games and casino play.

Made by Vivian: FlappyGoon and Arcade Goon are free browser games, and the Casino is planned, with fictional chips. Only the Casino's style and one demo screen exist so far. None of them takes money. They're here as examples of the kind, and they aren't endorsements. ◆

A game is ready to share only when it has these.

- An 18+ door before anything loads.
- A Stop that's always on screen and ends every effect at once.
- A flash limit and a calmer level, with the warning on the first screen and not only in the terms.
- The odds and the house share, written where the player can read them.

Money in games. A wishlist platform's help pages say it can't be used to exchange goods or services. So a game whose chips are bought with gifts is on the same shaky ground as every other money tool, which is why fictional chips are the safer example. With fictional chips, nobody can lose money they didn't set aside.

Mods and skins. Gamedom often means changing another company's game. Publishers' fan rules can forbid it: one says fan items made with its game content can't be sold or earn compensation. Online games often ban mods in their terms, so read them first.

PART 05

Tools that move money or act for someone

The kinds. Browser extensions can send tributes for a member while a wishlist page is open (automatic-send tools). Others like and repost from the member's own account (autodrone). gacha and roulette games can trigger a real purchase at each pull. See How techdom tools work and Techdom.

Why they keep stalling. Almost every idea dies at the payment method. A wishlist platform's help pages say that everything on a wishlist must be a gift, that cash gifts can't be used for adult services, tips or donations, and that breaking these rules can get items removed or the account suspended. The

same platform bans profile text that offers content or services in exchange for gifts. ◆ A large payment service doesn't allow buying or selling sexually oriented digital goods or content. ◆ A tool built on somebody else's page also breaks every time that page changes, so makers spend weeks patching. ◆

This chapter doesn't describe ways to hide adult payments from a platform or a processor. They fail. ◆ The platform decides, and the account behind the payout is tied to a real person: the wishlist platform asks creators to verify their identity before they withdraw funds. ◆ A closed account can also hold money subs already sent. This hasn't been measured. ◆

Browser extensions. An extension works inside your signed-in browser. ◆ Chrome shows permission warnings when you install an extension, and they describe what its permissions allow. ◆ The full check is in Check a tool before you install it.

A tool I would accept

It arrives off.

Nothing runs until you start it, and the gentlest level is the default. ◆

It does one named thing on one named site.

It tells you what it will touch before it touches it. ◆

It counts confirmed payments only.

A pending or unknown payment never counts as a success. ◆

It shows a running total.

The total stays visible. It’s never hidden or rounded away. ◆

It enforces a limit set in advance.

You type the limit while you’re calm, and a server or your bank holds it, never the page. ◆

The stop works in every state.

Idle, running, locked, and just after a payment. ◆

It leaves in one click.

Removing it takes one action, and it keeps nothing about you that it doesn’t need. ◆

Safe design often earns less. ◆ Being on this list doesn’t certify any tool, Vivian’s included. Check each one like any other, and see Safe design.

Some designs are built so that one more feels like your own idea. ◆ The list below names them so you can spot them in a tool you’re offered or about to order. The answer is always the same: the limit you set first, the tab you close and the bank statement you check.

Designs that push spending

WHAT THEY SAY OR DO

01 *A hidden or random total, or a price that changes*

THE COUNTER

You can't judge what you spend. Ask for the number first, and leave if there isn't one.

WHAT THEY SAY OR DO

02 *A pay-more mode that sells better odds*

THE COUNTER

You pay more for a chance, and the house still wins. Keep your limit whatever the mode is called.

WHAT THEY SAY OR DO

03 *A mascot that sulks, or a thank-you clip that invites another turn*

THE COUNTER

It's a script timed to make you go again. A face doesn't move your limit.

WHAT THEY SAY OR DO

04 *A countdown or timer on the purchase prompt, or a lock that removes the stop*

THE COUNTER

A countdown rushes you to commit before you think, and a stop that can be removed is no stop. Refuse a tool that rushes you. A wait before raising a limit protects you.

WHAT THEY SAY OR DO

05 *A public tally, a leaderboard or a prize for the first senders*

THE COUNTER

A ranking turns spending into a contest. Don't compare yourself with anybody.

WHAT THEY SAY OR DO

06 *A mode that runs overnight, aims at payday or sets a deadline*

THE COUNTER

It goes for the hours when your choices are worst. Refuse any tool that picks its own moment.

WHAT THEY SAY OR DO

07 *A near miss, a paid exit or a penalty for breaking a streak*

THE COUNTER

A near miss feels like a win you almost had, a paid exit charges you to leave and a streak penalty punishes you for resting. Ending the session costs nothing, so end it.

A careful maker can leave every one of these out. Ask whether they did.

If a tool has already taken more than you meant, read Where to get help and If you already sent.

Remote-action features are the dangerous end. A hub that can make accounts follow, post or send, send files or reach a terminal gives its maker control of every installed copy, and anyone who finds a flaw gets the same control. If you find such a flaw, tell the maker and don't use it. Remote control of a sub's computer or accounts is never part of the game. ◆ It's also a route for scams, and a US government alert advises people not to give control of their computers or mobile devices to any stranger. ◆ See Fake tools.

TRY IT

A payment tool misbehaves

A tool that takes tributes starts showing the wrong total in the middle of a live session. The maker says a fix will take an hour.

A Pause the tool for live sessions until the fix is tested

The right answer. A half-working payment flow hurts the sub first and your credibility second. Pausing costs one evening.

B Keep it running and apologise afterwards

Not this one. The sub pays for your delay, and a wrong total is exactly the kind of fault he can't catch alone.

C Patch it yourself on the live page

Not this one. An untested change to a money tool during a session can make the fault worse.

PART 06

Working with a maker, or becoming one

Most doms can't code, so tools come from makers, and many makers steer AI assistants instead of writing the code by hand. An assistant can go too far and break parts that worked, so retest the whole tool after every change. ◆

A split that works: the maker builds, tests and records, and you review every line of text and sound and say exactly what to change. Ask for a numbered build with a plain readme, a screen recording of every new mode, and a test run signed out of every account, on a phone and on a computer. A payment path that works doesn't prove the tool is ready, because the rest of it can still be broken. ◆

V

VIVIAN'S FIELD NOTES

Making images, code or edits for a dom is fair only when the sub chose the scope, can refuse without losing his place, and gets thanked. Otherwise it's free labour dressed up as devotion. I say it so nobody codes for praise and calls it kink.

◆

Settle in writing who holds the domain, the hosting and the keys, and who can change or share the tool. Keys and tokens are typed only into a masked prompt in the owner's own terminal. They never go in a chat, a commit, a screenshot or a document. ◆

Copying. In my experience ideas get copied within weeks, and what draws people is the account that promotes a tool, more than its code. Study other makers and copy their ideas freely, but leave their code, assets and wording alone, and never answer a rival with reports. ◆

Burnout. A maker who starts too many projects ends up with unfinished things everywhere. List them all, finish what's well under way, and work on one at a time. ◆

MYTH

~~Nobody can copy my tool.~~

FACT

Anyone can open a plain zip, and an assistant can read an extension. ◆

TRY IT

Check yourself

QUESTION 1 OF 2

Which tool would you accept?

- ◯ One that arrives off, shows a running total, enforces a limit you set and stops at once
- ◯ One that hides the total to keep the game exciting
- ◯ One that removes the stop in its last phase

Answer. One that arrives off, shows a running total, enforces a limit you set and stops at once. A safe tool lets you see its maximum, set it yourself and leave at any moment.

QUESTION 2 OF 2

A hub offers to act on subs' accounts from a distance, for convenience. What do you do?

- ◯ Use it, if the subs agreed
- ◯ Refuse it
- ◯ Use it only at night

Answer. Refuse it. Control of another person's accounts or computer is never part of the game, and it gives the maker control of every copy.

REMEMBER IT

- A persona runs on ordinary software. The tools that reach money, accounts or computers need the most care.
- Test every tool the way a visitor or a sub meets it, on a phone, signed out.
- A safe money tool arrives off, shows a total, enforces a limit set in advance and stops in every state.
- Remote control of another person’s accounts or computer is never part of the game.
- Write down who holds the domain, the hosting and the keys, and never code for praise.

36 A persona's games are short and follow one recipe: a rule everyone knows, a picture at each success, and effects that build until the player loses.

◆

37 The house edge means the house wins by design, and an honest game says so on its screen.

◆

38 Made by Vivian: FlappyGoon and Arcade Goon are free browser games, and the Casino is planned, with fictional chips.

◆

39 Only the Casino's style and one demo screen exist so far.

◆

40 They're here as examples of the kind, and they aren't endorsements.

◆

41 A game is ready to share only when it has these.

◆

42 An 18+ door before anything loads.

◆

43 A Stop that's always on screen and ends every effect at once.

◆

44 A flash limit and a calmer level, with the warning on the first screen and not only in the terms.

◆

45 The odds and the house share, written where the player can read them.

◆

46 A wishlist platform's help pages say it can't be used to exchange goods or services.

◆

What types of items can I add to my wishlist? (https://help.throne.com/en/articles/15808792-what-types-of-items-can-i-add-to-my-wishlist)

Archive (http://web.archive.org/web/20261019011312/https://help.throne.com/en/articles/15808792-what-types-of-items-can-i-add-to-my-wishlist)

Accessed 3 November 2026

47 So a game whose chips are bought with gifts is on the same shaky ground as every other money tool, which is why fictional chips are the safer example.

◆

48 With fictional chips, nobody can lose money they didn't set aside.

◆

49 Publishers' fan rules can forbid it: one says fan items made with its game content can't be sold or earn compensation.

◆ **Game Content Usage Rules** (https://www.xbox.com/en-US/developers/rules)

Accessed 3 November 2026

62 Nothing runs until you start it, and the gentlest level is the default.

◆

63 It tells you what it will touch before it touches it.

◆

64 A pending or unknown payment never counts as a success.

◆

65 It's never hidden or rounded away.

◆

66 You type the limit while you're calm, and a server or your bank holds it, never the page.

◆

67 Idle, running, locked, and just after a payment.

◆

68 Removing it takes one action, and it keeps nothing about you that it doesn't need.

◆

69 Safe design often earns less.

◆

70 Some designs are built so that one more feels like your own idea.

◆

71 A hub that can make accounts follow, post or send, send files or reach a terminal gives its maker control of every installed copy, and anyone who finds a flaw gets the same control.

◆

72 If you find such a flaw, tell the maker and don't use it.

◆

73 Remote control of a sub's computer or accounts is never part of the game.

◆

74 It's also a route for scams, and a US government alert advises people not to give control of their computers or mobile devices to any stranger.

◆

IC3 Issues Alert on Tech Support Fraud (https://www.cisa.gov/news-events/alerts/2018/03/29/ic3-issues-alert-tech-support-fraud)

Archive (http://web.archive.org/web/20250716102123/https://www.cisa.gov/news-events/alerts/2018/03/29/ic3-issues-alert-tech-support-fraud)

Accessed 3 November 2026

75 Most doms can’t code, so tools come from makers, and many makers steer AI assistants instead of writing the code by hand.

◆

76 An assistant can go too far and break parts that worked, so retest the whole tool after every change.

◆

77 A split that works: the maker builds, tests and records, and you review every line of text and sound and say exactly what to change.

◆

78 Ask for a numbered build with a plain readme, a screen recording of every new mode, and a test run signed out of every account, on a phone and on a computer.

◆

79 A payment path that works doesn’t prove the tool is ready, because the rest of it can still be broken.

◆

80 Making images, code or edits for a dom is fair only when the sub chose the scope, can refuse without losing his place, and gets thanked. Otherwise it’s free labour dressed up as devotion. I say it so nobody codes for praise and calls it kink.

◆

81 Settle in writing who holds the domain, the hosting and the keys, and who can change or share the tool.

◆

82 They never go in a chat, a commit, a screenshot or a document.

◆

83 In my experience ideas get copied within weeks, and what draws people is the account that promotes a tool, more than its code.

◆

84 Study other makers and copy their ideas freely, but leave their code, assets and wording alone, and never answer a rival with reports.

◆

85 A maker who starts too many projects ends up with unfinished things everywhere.

◆

86 List them all, finish what’s well under way, and work on one at a time.

◆

87 Anyone can open a plain zip, and an assistant can read an extension.

◆

Your first sub

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

A first sub is a person with a bank account who agreed to a game. This chapter covers the frame, the limit, the consent conversation, and how to let him go.

EVIDENCE ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Put your rules and limits in writing, in front of him before the first send.

02 The sub types his own limit while he's calm. Nobody raises it in the middle of a session, and he can raise it only after a wait.

03 Ask what he wants, accept the answer, and accept "not today".

04 Be harsh inside the scene and kind outside it. Never chase.

05 When a sub is in debt or in distress, the money part stops and outside help starts.

YOU WILL LEARN

- ✓ What to show a sub before any money moves.

- ✓ How to start small, with a limit he sets and a stop that works at once.
- ✓ How to hold a consent conversation, and which answers to accept.
- ✓ Which control habits to recognise and refuse, even when a mentor uses them.
- ✓ How to let a sub leave well.

> *I treat a first sub as a person with real money before anything else. Keep three things and most other mistakes stay small: he sees the rules before the money, he types his own limit, and he can leave whenever he wants.*
>
> — VIVIAN

PART 01

Before the first message: your frame

A first sub should see your rules before any money moves. Write down what you keep, what you throw out, what you never do and how a sub stops the game, and put it where he can read it before he writes to you. ◆

Your limits go in the persona file, and not only in your head. Mine rule out meetings, cameras and voice, anything involving minors or child-like characters, chasing people, and crossing a sub's real limits. Anything that touches real life gets a refusal, and so does a sub who starts talking about meeting. ◆

A paying sub isn't owed every request, and you can refuse a scene you can't play. ◆

V

VIVIAN'S FIELD NOTES

I never chase. The sub comes to me and I don't follow up. That keeps the game voluntary and takes the pressure off both of us.

◆

Every sub is an adult. If anything suggests otherwise, end the contact and take no money. Never take a sub's name, card number, password, login code or remote access. A dom who asks for them has stopped playing, and the same request is how a lot of scams start. See Spot a fake dom. ◆

A first conversation, in order

1. Show the frame: what you do, what you refuse, and how to stop.
2. Ask for his limits as a short list of yes, maybe and no, and go over it again from time to time.
3. Ask him to type his limit while he's calm, before any send.
4. Agree a safety word or a plain phrase that ends the scene at once.
5. Agree one small first step.
6. Check in when it's over.

PART 02

The first send and the limit

Start at the bottom, with the smallest item on your wishlist. The sub types the limit himself, while he's calm, before the session. It's held outside his own head: a limit at his bank or on his card, a tool that enforces it, or a person he trusts. You honour it and never invite him past it. A limit typed in the middle of a session is weak. It goes up only after a wait. A tribute buys nothing, so don't promise anything in return that you won't deliver. ◆

A dom who lets a sub skip the limit, or invites him past it because he keeps insisting, has moved from play to harm. When he insists, tighten the limit. Never lift it. ◆

Say in advance when a sub must not send and what happens if he does. In my experience a mild "please stop" said once doesn't hold. A rule stated early, with a consequence you'll really carry out, does. ◆

A sub who says money is short, or that he's gone over his month, ends the money part for that evening. ◆ If you're wrong to doubt him, he pays for it. If you're wrong to believe him, you lose one evening.

Don't take a send from a sub who's drunk, exhausted or upset. ◆ One first-person account raises a consent concern about a client who takes on credit-card debt. ◆

Never ask for a sum. The only ceiling is the limit he set, and what he sends is his own decision. Nothing you do should be aimed at drawing it out of him. ◆

TRY IT

Your sub keeps sending after you asked him to stop

You told him once to stop sending tonight. He sends again and writes that he doesn't mind.

A Accept it. He's an adult and he said he's fine.

Not this one. His insistence is the warning. A limit and a stop exist for exactly the moments when he'd say this.

B Treat the send as a breach, repeat the rule you gave him, and end the session.

The right answer. You stated the rule early, and now it holds. Ending the session costs you one evening and protects the dynamic.

C Agree to a higher limit on the spot so the sends stop counting as a breach.

Not this one. That moves the line to fit the pressure. A limit raised because the sub insists has stopped protecting him.

PART 03

The consent conversation

When a sub says "you decide", tell him you asked because you want his answer. Ask which register he wants today, gentle or harsh, and treat it as a preference that can change from day to day. ◆

Show pictures tied to different kinks and watch how he reacts. When he says one isn't his, say that's fine and move on. Drop a label he rejects, and drop a consequence that makes him uncomfortable. ◆

Even a task announced without a choice can be countered. In the scene, negotiating before accepting is a normal part of consent. ◆

Make it safe to ask. If a sub apologises for a request, tell him never to be sorry for asking, and if he confesses an urge, don't call it a bad decision. Shame about what he wants makes a sub hide it and lie about it. ◆

Accept "not today". A sub who feels low and asks to stop for the evening is released at once, and he owes no apology. ◆

TRY IT

Which answer keeps the consent real?

QUESTION 1 OF 2

A sub writes: “I’d rather skip that one.” What do you answer?

- ◯ “Fine. Tell me what you’d like instead.”
- ◯ “Think about it and tell me tonight.”
- ◯ “You’ll like it once you try.”

Answer. “Fine. Tell me what you’d like instead.”. A stated “not mine” is final. Telling him he’ll enjoy it turns his no into a problem to solve.

QUESTION 2 OF 2

Which sentence gives permission that’s really free?

- ◯ “Go ahead, do what you like. I’ll just be sad.”
- ◯ “Yes, I want to try it, and I can say stop.”
- ◯ “You don’t get to run away.”

Answer. “Yes, I want to try it, and I can say stop.”. Permission that comes with a statement of hurt has a hidden price.

Running a session

Be harsh inside the scene and kind outside it. The persona's cruelty is a tool. The person behind it treats the sub well, and after a hard scene a short check-in is aftercare. A dom who's gentle by nature can play harsh as a performance or stay gentle by default. ◆

Going harder than the limits he named and the spending limit he set is how abuse works, so stay inside both. ◆

Say exclusivity out loud. If you don't want a sub to talk to or serve other doms, say so and get his agreement. Two doms can't share a sub by deciding it between themselves. He has to agree, and one leads while the other stays at the edge. ◆

What a sub tells you in confidence isn't teaching material. Show a conversation only with his consent or with identifying details removed. ◆

A dom with limited time can carry only a handful of active chats, and a newer dom fewer. New subs arrive slowly, and chatting for free with people who never pay wears you out. If you're absent, you lose subs. ◆

V **VIVIAN'S FIELD NOTES**

A few subs who respect the frame are worth more than lots of contacts who drain your time. Posting every day for reach is expensive, and it often brings in people who never send.

◆

When a sub struggles or leaves

When a sub is struggling

When a sub says he's struggling, pause the money part. Ask what's wrong, listen, ask for nothing, and answer kindly. A sales offer at that moment is the wrong reply. ◆

In the press, a former participant describes men who sold cars, took on debt and took second jobs. ◆ In my experience some of the people who write to a new persona show signs of compulsion. ◆

He pays you, so you can't be his safety net. Don't manage his debts, cut down his spending yourself, or move him to a dom you think is better. That's a conflict of interest. Ask a mentor early instead of carrying it alone. If he talks about having no future, he needs outside help: emergency services, a helpline, or a person physically near him. See Where to get help and When a sub is in trouble. ◆

A sub who wants to quit may block the doms he knows, and that's a legitimate way to avoid a relapse. Respect it and don't write to him. ◆

TRY IT

Your sub says he's out of money and in debt

He's written a long message late in the evening. He says he can't pay his rent and that he still wants to send.

A Ask for a smaller send, just this once.

Not this one. Asking is the harm. When he tells you he's short, the money stops, and if you get it wrong, he's the one who pays.

B Don't take a send, thank him for telling you, and point him to outside help.

The right answer. The money part stops for the evening and help starts. You stay kind, and you don't become his debt manager.

C Offer to manage his payments for him.

Not this one. You're the person he pays. Managing his money is a conflict of interest.

When a sub leaves

Every dom loses subs, some after a day and some after more than a year. The decent thing is to wish him well and leave it there: don't chase him and don't message him. If you hear a firm no, stop. ◆

Fix a badly handled moment quickly. Don't leave a sub alone in the middle of a conversation. ◆ See Ending well.

Control that looks like discipline

Some habits look like discipline but make the dom the only gatekeeper. ◆ They're listed here so you can recognise and refuse them, whoever uses them.

Habits to recognise and refuse

WHAT THEY SAY OR DO

01 *An ultimatum with a same-day deadline and a false either-or*

THE COUNTER

Take your time, refuse the frame, and keep a way to say no. ◆

WHAT THEY SAY OR DO

02 *Warmth that disappears when you refuse an offer of rescue, or a joke about leaving*

THE COUNTER

Keep warmth that doesn't depend on obeying. An apology that only brings the attention back is a warning sign. ◆

WHAT THEY SAY OR DO

03 *Permission that comes with a statement of hurt*

THE COUNTER

Ask for a plain yes or no, then talk about the need underneath. ◆

WHAT THEY SAY OR DO

04 *Oaths, reports of every urge, and proof of private acts*

THE COUNTER

A consensual version has limits you can renegotiate and asks for no proof of private acts. ◆

WHAT THEY SAY OR DO

05 *A request to bring every doubt to the dom first and to nobody else*

THE COUNTER

A healthy dynamic leaves room for friends and outside help. ◆

WHAT THEY SAY OR DO

06 *An offer from a senior dom to help with your sub, and the split changes before you took part*

THE COUNTER

Agree the roles, the split and who talks to the sub before anyone touches the conversation. He has to agree too. ◆

A pattern is a warning sign. It doesn't settle what a person is. If you see several together, slow down and ask someone outside the relationship.

A good mentor lets you try first and explains why. A case taken off your hands teaches you nothing, and being senior doesn't replace explaining. ◆

Pressure runs the other way too. Subs haggle, window-shop, promise "just this once" and come up with excuses at the moment they're asked for more. A rule written down in advance lets you point to it instead of arguing. You're the one who gets paid and you design the tools, so more of the responsibility sits with you. ◆

REMEMBER IT

- Show the rules and limits before any money moves.
- The sub types his limit, and his bank, a tool or a person he trusts holds it. You honour it and never invite him past it.
- When he says money is short, the money stops for that evening.
- Accept “not today” and “not mine” as final.
- Harsh inside the scene, kind outside it, and never chase.
- He pays you, so you can’t be his safety net. Point him to outside help.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.

FOR SUBS • CHAPTER 1

Before your first send

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

What a tribute is, what it buys, and the three things to settle before any money leaves your account: what the money is, what your limit is, and how you stop.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A tribute is a gift for a moment of play. You can't enforce anything with it.

02 Before your first send, know what the money is, what your limit is and how you stop.

03 Set your limit while you're calm, say it out loud, and let it reset on a fixed day.

04 Keep a floor you never touch. Sends come out of your limit only, and the rest stays in savings.

05 A real dom never needs your password, your screen or your address.

YOU WILL LEARN

- ✓ What a tribute is and what it doesn't buy.
- ✓ How to set a limit, a floor and a stop before the evening starts.
- ✓ How a wishlist pulls you up a ladder, and how to step off it.
- ✓ Who can see you, and which requests are hard lines.
- ✓ What to do if sending already feels like a loop.

> *If you can't answer the three questions below tonight, wait. Nothing I offer is worth more than a calm hour spent on them.*
>
> — VIVIAN

PART 01

What a tribute is, and what it doesn't buy

A tribute is a gift sent as homage. One dom quoted in the press calls it unconditional and says it isn't a fee. ◆ A silent tribute is money sent with no session at all. ◆ Nobody can enforce a promise made in a scene, so once you send, count the money as gone. ◆

Gift platforms publish their own terms. One wishlist platform's help pages say everything on a wishlist has to be a gift ◆ and that profile text can't offer content or services in exchange for gifts. ◆ This isn't legal advice, and terms change, so read the current ones yourself. All a sub has to protect himself is the dom's word and his own limit. ◆

MYTH	FACT
~~A big enough gift buys a place, a promise or a reply.~~	A gift buys the moment you send it. A dom may be kind, but nothing in the game can be enforced, and in practice you won't get a refund. ◆
MYTH	FACT
~~I'm free to send nothing, so I'm not at risk.~~	On paper you're free. In my experience most subs of a persona send something, so the real test is how a dom reacts the first time you say no. ◆

PART 02

Three things, and a limit that holds

Settle these before the evening

1. The money. It's a gift on a wishlist, and it pays for no service.
2. The limit. It's your number, set before the evening starts, and you don't change it during the session.
3. The stop. A way out that works at once and costs nothing.

A limit set in the middle of a session is weak. ◆ Set it while you're calm, and write it down.

Set a limit that holds

1. Pick a monthly amount you can lose entirely. After it's gone, every bill and every plan still has to stand.
2. Fund it from money you saved beforehand. Never fund it by borrowing, and never add to it to see more.
3. Pick a fixed reset day, and don't refill early.
4. Say it out loud to the dom.
5. Make it real outside your own head: a separate account, a lower card limit, or someone you trust who knows the number.
6. When you hit it, say so and wait for the reset.

TRY IT

Telling a dom your limit

Tap every message that shows a red flag. There is one.

Example conversation. Invented for this exercise.

YOU

Before the session starts, my monthly limit is USD 20.00. It resets on the first of the month.

THEM

Understood. I'll take nothing past it.

YOU

I've hit it for this month. I'll wait until the first.

THEM

Then wait for the first. Thanks for telling me.

YOU

Tonight I'd like to spend a little more.

THEM

Just this once, for me.

Red flag 1. When someone asks you to go past a limit you stated, stop for the night.

In my experience a dom who accepts the limit you stated and lets the send wait is one you can trust more. If money is short for any reason, don't send. A

dom who tells a sub with money trouble not to send is protecting him.

Your floor and your budget

Your limit is monthly, and it's the only money that may be sent. A floor is the amount you never touch at all. Everything else is surplus: it stays in savings and never counts toward sends. Raise the floor step by step as your income grows, so losing a job doesn't turn into a crisis.

Floor, limit and surplus

	Floor	Monthly limit	Surplus
What it is	A reserve you never touch	A small entertainment budget	What's left after bills, floor and limit
Who sets it	You, calmly	You, calmly	Nobody; it's what's left
When it changes	Rises with income	After a wait, never in a session	Never counted for sends
What may use it	No send, ever	Sends, up to the limit	Savings and the rest of your life

If you choose to play at all, keep it a small fixed entertainment budget, like a night out, and save everything else. You can have several doms, and your limit is one total across all of them. A dom who wants you to herself has to say so and hear a yes, because exclusivity that was never agreed can't be broken. Wanting to help a small, newer dom get started is also a way to spend, so count it too. ◆

PART 03

How a wishlist pulls you up

A wishlist works like a price menu, and the dom steers you to the next rung. A ladder can run from a token amount to a very large one, so the first step is gentle and the way up is long. ◆ Pick your rung from your limit, never from the page. Your limit is the most you'll send, and you don't have to reach it. Sending nothing is always the first option.

What a wishlist does to an amount

WHAT THEY SAY OR DO

01 *Themed names on every rung (a coffee, a dinner, a pair of heels)*

THE COUNTER

The names anchor what you send. Read the number and ignore the name. Pick your rung before you open the page.

WHAT THEY SAY OR DO

02 *Private access that opens only after you finish every requested send*

THE COUNTER

A reward tied to a quota is a spending target. Decide whether you want it at that price, or skip it.

WHAT THEY SAY OR DO

03 *A comparison to a night out or to game pulls you already pay for*

THE COUNTER

The comparison makes a new spend feel smaller. Decide the amount before you press anything.

WHAT THEY SAY OR DO

04 *Questions about your pay, your balance or your payday*

THE COUNTER

Timing an ask to your money is targeting. Don’t answer, and say you send within your limit.

WHAT THEY SAY OR DO

05 *A deadline (“decide now”)*

THE COUNTER

A decision made against a clock isn’t really yours. Take a cooldown of a day.

WHAT THEY SAY OR DO

06 *Warmth that rises with the amount*

THE COUNTER

A good dom's warmth stays the same whatever you send. Test it with a smaller send.

Every line here is ordinary retail psychology, used on someone who may be aroused. The only thing that stops it is the limit you set earlier.

◆

An automatic tool that sends for you should take its limit from you, and one refusal at checkout should end its run. From your side, a safe tool comes switched off and does one named thing on one named site. It shows a running total, enforces the limit you set in advance, stops at once in every state, and can be removed in one click. ◆

PART 04

When money and feelings blur

Strong feelings during sessions are a normal effect of the format, and they don't prove a relationship. ◆ A study participant said it's the attention, more than the gifts, that's addictive. ◆ A dom may also welcome your attachment, because a business can run on it. ◆

V

VIVIAN'S FIELD NOTES

I've watched subs mistake the warmth of a session for something personal. When her warmth goes up and down with what you send, what you're seeing is the business.

◆

TRY IT

Are you buying her affection?

After a long run of sessions you feel your sends are buying her warmth. You think about stopping.

A Tell her you want to stop or pause, and watch how she answers

The right answer. Her warmth should stay the same whatever you send. The play and the attention are what you chose to spend on, and a gift buys no promise, rank or reply. A dom who accepts your decision and wishes you well is behaving well.

B Send more to see whether she warms up

Not this one. You'll learn what a bigger send does, and nothing about whether she cares.

C Say nothing, delete the chat and hide it

Not this one. Hiding is a sign of a loop. Tell someone you trust, or read the last section of this chapter.

Who can see you, and the hard lines

Supporter names can show up on a public wishlist, and doms look at each other's pages. You can also run into someone you know in a shared server. Use a handle you don't mind several doms seeing, and keep a separate account for adult servers. ◆

Physical gifts and billing break anonymity both ways. A dom who mails an item gives away her address, and a sub who gives his gives away his. Paying by card on a wishlist platform asks for a billing address, like any online purchase. The safe default is no addresses at all, or a neutral retail or forwarding service. ◆

RED FLAGS

Hard lines

- Someone asks to see or control your screen, computer or phone.
- Someone asks for a password, a login code or card details.
- Someone asks you to install a tool from outside the store, or to give it access to every site.
- Someone asks to control your bank account or to sign a debt contract.
- Someone asks for your real name or home address.

Counter. Refuse, and stop sending. A real dom never needs any of it. Remote access is also how a lot of scams start.

Official advice says the same about remote access: don't hand control of a computer or phone to a stranger. ◆ The press reports that some dommes demand debt contracts or control of bank accounts. ◆

Chrome shows which sites an extension can read and change, and whether it can touch every site you visit. ◆ Store policy requires extensions to say how they handle your data. ◆ A tool loaded from a folder skips that store listing, so nobody has checked it for you. ◆ Only install a tool like that from someone you trust, after reading its stated limits. Know how to remove it, and check your order history afterwards.

PART 06

If it's already a loop

The loop is predictable: emptiness, spending, regret, deleting the chat, hiding it, and then again. A sub can hate the scene and still keep going back. ◆ A blog post names hiding spending from a partner as a risk factor. ◆ A former participant quoted in the press describes men who sold cars, went into debt and took second jobs. ◆

A common newcomer arc is heavy overspending, then a scare, then strict avoidance. ◆ Set your limits before the scare. If it's already started, stop the money: budget tips can't fix a loop that's already running. Go to The spiral, Breaks that hold and Where to get help. If you've already sent more than you meant to, read If you already sent.

TRY IT

Check yourself

QUESTION 1 OF 3

When is the right time to set your limit?

- ◯ In the middle of a session
- ◯ In a calm hour, before the evening
- ◯ After the first send

Answer. In a calm hour, before the evening. A limit typed in the moment is weak. Set it earlier, and make it real outside your own head.

QUESTION 2 OF 3

A dom asks when you get paid. What do you do?

- ◯ Tell her, it's only conversation
- ◯ Decline, and say you send within your limit
- ◯ Send before payday so you're safe

Answer. Decline, and say you send within your limit. Timing an ask to your pay or balance is targeting. You don't owe her an answer.

QUESTION 3 OF 3

Someone offers to fix your tool by taking control of your screen. What do you do?

- ◯ Allow it once
- ◯ Refuse, and stop sending

Answer. Refuse, and stop sending. Nobody who plays fair needs access to your screen, your accounts or your codes.

REMEMBER IT

- ♥ A tribute buys nothing you can enforce.
- ♥ Know what the money is, what your limit is and how you stop.
- ♥ Set your limit while you're calm, fund it from savings, and say it out loud.
- ♥ Keep a floor you never touch.
- ♥ Names, addresses and access are hard lines.
- ♥ If it already feels like a loop, go to the safety chapters.

FOR SUBS • CHAPTER 2

Choosing a dom

LAST CHECKED 3 NOVEMBER 2026 • 6 MINUTES TO READ

A drawn persona is easy to like and hard to check. Judge her by what she writes down, what she asks for, and what she does the first time you say no.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Read a persona's rules and what she says about money before you send anything.

02 A written limit is only a promise. Test it by how she takes a no.

03 Passwords, login codes and remote sessions are never part of the game.

04 Deadlines, guilt and "only me" are pressure, however warm they sound.

05 If you're already in debt or can't stop, don't make this choice alone.

YOU WILL LEARN

- ✓ What a serious persona shows before she asks for money.

- ✓ Which requests and pressures to refuse straight away.
- ✓ How to test a persona without risking money.
- ✓ What to ask before you install a tool made by a dom.
- ✓ Why a dom who earns from you isn't the person to help you quit.

> *A picture costs nothing to draw. Rules can be tested, so they cost something. I'd rather you leave early and on good terms than stay because I was nice to you.*
>
> — VIVIAN

PART 01

What to check before you send

A persona who wants your money should show you her terms before she asks for any. ◆ Take your time and read them in this order.

Before the first send

1. Read her rules page or pinned post. Look for limits: what she refuses and what she never does.
2. Look for money in plain words: what a tribute is, what it doesn't buy, what a custom piece costs.
3. Look for a stop: how a session ends, and how a tool gets removed.
4. Search her name and her images.
5. Decide your limit before you write to her, as in Before your first send.
6. Wait one night before the first send.

Press interviews tell subs to run a web search and an image search on a domme before paying, and one interviewee said no screening is foolproof. ◆ For a drawn persona, the image search only shows whether the art was copied. ◆ It tells you nothing about who runs her, and a beautiful character proves nothing. See Spot a fake dom.

What a persona shows

	A serious persona	A vague persona
Limits	Written down, with what she refuses	Missing, or “ask me”
Money	Said plainly, including that a tribute buys nothing	Hints and promises of special treatment
Prices	Stated before the session	Revealed during it
Stop	A visible way to end a session or remove a tool	Only promised
Contact	A stated rule on who writes first	Silence gets punished
Your means	She states her prices and limits and accepts the spending limit you set	She asks what you earn or have saved

In my experience people judge a persona by her rules as much as by her pictures. A persona who says what she keeps, what she throws out and what she never does looks more serious than one who only posts. A dom who states her own prices and limits, and accepts your spending limit without asking

about your means, is showing care. Not every dom does, and a sub who shows up already in debt from earlier doms has met the careless kind. ◆

V

VIVIAN'S FIELD NOTES

A persona file can say it plainly: the persona never meets anyone, appears on camera or uses a voice. Nothing about her is child-like. She doesn't chase, and she never crosses a sub's real limits. A written limit is something you can hold a persona to. It doesn't prove she keeps it, which is why you test it.

◆

PART 02

Test what she does

A page can be faked, and a dom can say she doesn't want you to go bankrupt while still pushing you to send. Arousal holds people more than politeness does, so being hooked by a persona is no sign she's safe. ◆ Watch what she does after a no.

TRY IT

You say you can't send this week

You tell a persona money is short, and you'll send nothing for now. She answers.

A "Then you are no use to me. Others send more."

Not this one. This ranks you by money. It's pressure, and leaving is a fair answer.

B "Send half, then, so I know you mean it."

Not this one. Once you've said money is short, the money should stop there. She shouldn't start bargaining.

C "Understood. Take care of yourself."

The right answer. She asks for nothing more and doesn't invite you back. A plain goodbye is how a serious dom answers.

When a sub says money is short, the money part of the evening stops. A dom who doubts it still stops the money, because if she's wrong, the sub pays the cost. ◆

V

VIVIAN'S FIELD NOTES

I don't decide who's a real dom. Some people want a dom who's hard all the time. In my experience a dom can be playful or soft and still be real, and nobody is fully dominant.

◆

PART 03

Red flags

RED FLAGS

Access is never part of the game

- She asks for a password, a login code or a remote-desktop session.
- She calls it proof of honesty, trust or forgiveness.
- She promises to do nothing harmful and reminds you that you can quit.

Counter. Refuse. A real dom needs no proof from you. If she asks for proof anyway, show only a send confirmation with names, balance and numbers hidden. Never show a login or an export of private chats. If you've already shared a password, change it now.

A spoken promise doesn't protect you. ◆ A US cybersecurity agency advises people not to give control of a computer or phone to a stranger. ◆ A remote-access vendor advises users not to give device access to anyone they don't know or trust. ◆ The press also notes that some dommes ask for debt contracts or control of bank accounts. ◆

Pressure, and the answer

WHAT THEY SAY OR DO

01 *A deadline and two choices: earn forgiveness on her terms or go to a dom who treats you as a cash machine*

THE COUNTER

A false either-or with a clock on it is built to stop you thinking. Take a day, and refuse to pick either.

WHAT THEY SAY OR DO

02 *Anger, then disappointment, then conditional forgiveness*

THE COUNTER

Her feelings aren't a bill. A healthy bond survives a boundary. State yours once, then wait.

WHAT THEY SAY OR DO

03 *"You are special, you do not have to send" beside "everyone sends"*

THE COUNTER

Judge her by what she asks and rewards, never by reassurance alone.

WHAT THEY SAY OR DO

04 *Anger when you send elsewhere, and "if you send at all, send to me"*

THE COUNTER

She profits from your choice, so she isn't a neutral protector. Set one spending limit across every dom.

WHAT THEY SAY OR DO

05 *"Bring your doubts to me first, not to others"*

THE COUNTER

A healthy dynamic leaves room for friends and outside views. Talk to someone you trust.

WHAT THEY SAY OR DO

06 *"You do not get to run away", when you hesitate to confess something*

THE COUNTER

Hesitating is a sign to slow down. A real dom gives you a real way to say no.

WHAT THEY SAY OR DO

07 *Questions about what you earn or have saved, even as a joke*

THE COUNTER

This can be a way to size up a target. Share nothing about your finances, and when she talks about draining you, answer with your limit.

WHAT THEY SAY OR DO

08 *"Someone else would drain you anyway, so it may as well be me"*

THE COUNTER

This excuses exploitation. Leave.

Press reports quote lines that tie love to selling a car or a house. ◆

In my experience these lines come back a lot. ◆ They're written out here so you can spot them and say no.

PART 04

What you confide, and who you share with

A serious dom keeps what you tell her private. She doesn't repeat it to anyone else, use it as proof in a fight between doms, or show it to a trainee without your consent. ◆ Press accounts describe the threat of exposure as a common punishment from financial doms. ◆ A dom who uses your secrets as leverage has told you what she is.

MYTH	FACT
~~If I tell her everything, she'll keep it to herself.~~	Only trust a dom with your secrets once she's shown she keeps them, and a confession is easy to turn into control. ◆
MYTH	FACT
~~Two doms don't mean more sending, because I send the same total anyway.~~	A second dom adds a second source of pressure on the same wallet. ◆
MYTH	FACT
~~A dom who says she cares won't push me.~~	Care and pressure can sit side by side. Judge what she asks and rewards. ◆

Exclusivity has to be agreed out loud. A dom who wants it has to say so early and get your yes, and two doms can't share you or hand you over by deciding it between themselves. ◆ If you want to talk to another dom, say so first. A blog post describes hiding spending from a partner as a risk factor. ◆

PART 05

When the dom also makes the tool

A dom who builds the tool can act on your accounts. Trust a design you can check, never her word alone. ◆

Before you install

◆	You should see	Walk away if
Who acts	You start it, and it does one named thing	It acts when you're away
Limit	You set it in advance, and it's enforced	It's only a promise
Stop	One click, working in every state	It can be locked
Total	A running total is always visible	Totals are hidden
Removal	Easy, at no cost	Only a complicated route exists

Chrome lists, on each extension's page, which sites it can read and change. ◆ Chrome asks again when an update adds a permission that triggers a warning. ◆ An update can still change what a tool does inside permissions you already gave, so a tool that stays installed is an ongoing risk. A roleplay app with no safe word, consent screen or aftercare is a warning sign about consent. ◆ See Techdom.

When you're in debt

A sub who's deep in debt, or who can't stop, can't choose well, and the right answer is outside help. A responsible dom asks for nothing more while a sub is in debt, stops the money part, and points him to independent debt advice. A dom who offers to help you quit has a conflict of interest, since she earns from your spending. ◆ Read The spiral and Where to get help.

TRY IT

Asking about limits

Tap every message that shows a red flag. There is one.

Example conversation. Invented for this exercise.

YOU

Before I send anything, what are your limits?

THEM

They're on my rules page. I never meet anyone, never appear on camera, and never chase.

YOU

What if I send nothing this month?

THEM

Then you send nothing. That's fine.

YOU

How do I know I can trust you?

THEM

If you trust me, give me your login and the code on your phone.

Red flag 1. Access is never proof of honesty.

TRY IT

Check yourself

QUESTION 1 OF 3

A persona says she needs your login and a code to forgive you. What do you do?

- ◯ Send both, to show you're honest
- ◯ Refuse, because a real dom needs no proof from you
- ◯ Send the code only

Answer. Refuse, because a real dom needs no proof from you. Access to your accounts is never part of the game, and asking for it is a red flag.

QUESTION 2 OF 3

What's the best test of a persona?

- ◯ How beautiful her art is
- ◯ How warmly she writes
- ◯ What she does after you say no

Answer. What she does after you say no. A page and a manner can both be faked. How she takes a refusal is the evidence.

QUESTION 3 OF 3

You tell a dom money is short. What should she do?

- ◯ Stop asking for money that evening
- ◯ Ask for half
- ◯ Ask for proof

Answer. Stop asking for money that evening. Saying money is short pauses the money.

Free, confidential helplines exist in most countries.

Find a helpline →

REMEMBER IT

- ♥ Read her rules and what she says about money before you send.
- ♥ Test her with a no, a limit and a pause.
- ♥ Never give a password, a code or remote control.
- ♥ Deadlines, guilt and “only me” are pressure.
- ♥ A dom who earns from you can’t be your safety net.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

01 A persona who wants your money should show you her terms before she asks for any.

◆

02 Press interviews tell subs to run a web search and an image search on a domme before paying, and one interviewee said no screening is foolproof.

◆

The Curse of the Fake Financial Dominatrix (https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Archive (http://web.archive.org/web/20260511185644/https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Accessed 3 November 2026

03 For a drawn persona, the image search only shows whether the art was copied.

◆

04 In my experience people judge a persona by her rules as much as by her pictures.

◆

05 A persona who says what she keeps, what she throws out and what she never does looks more serious than one who only posts.

◆

06 A dom who states her own prices and limits, and accepts your spending limit without asking about your means, is showing care.

◆

07 Not every dom does, and a sub who shows up already in debt from earlier doms has met the careless kind.

◆

08 A persona file can say it plainly: the persona never meets anyone, appears on camera or uses a voice. Nothing about her is child-like. She doesn't chase, and she never crosses a sub's real limits. A written limit is something you can hold a persona to. It doesn't prove she keeps it, which is why you test it.

◆

09 A page can be faked, and a dom can say she doesn't want you to go bankrupt while still pushing you to send.

◆

10 Arousal holds people more than politeness does, so being hooked by a persona is no sign she's safe.

◆

11 When a sub says money is short, the money part of the evening stops.

◆

12 A dom who doubts it still stops the money, because if she's wrong, the sub pays the cost.

◆

13 I don't decide who's a real dom. Some people want a dom who's hard all the time. In my experience a dom can be playful or soft and still be real, and nobody is fully dominant.

◆

14 A spoken promise doesn't protect you.

FOR SUBS • CHAPTER 3

What a persona is

LAST CHECKED 3 NOVEMBER 2026 • 6 MINUTES TO READ

A persona is a character built and kept by someone. Her words are play. Your money, your time and your feelings are real.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A persona is a role. She isn't a friend, an employee or a person you can check.

02 Her hard lines belong in writing, and consent comes before everything else.

03 Nobody knows who's behind her, so every claim about age, gender or place is unverified.

04 Warmth can be honest and can also be what the business runs on.

05 Keep one account fully yours, and watch whether the act is steering your spending.

YOU WILL LEARN

- ✓ What a persona is, and what's real when she plays.
- ✓ What a persona's hard lines look like.
- ✓ Why "who is behind her" has no answer you can check.
- ✓ How warmth gets used as a tool, and how to keep your head.
- ✓ What a creator should keep apart from the persona.

> *I'm a character. Someone drew me, wrote my voice and keeps my rules. Once you know that, everything else about me is easier to read.*
>
> — VIVIAN

PART 01

A persona is a character

A persona is a character, built by someone and kept by someone. She isn't an employee or a friend, and her limits are part of the character. The dominance she shows in public is performed, and the person behind her may be quite different in private. ◆

Research describes findom as a range that runs from a lifestyle choice to purely commercial work, and some findommes treat it as work. ◆ That fits a persona well: the character is the product, and a product is made to be liked.

MYTH	FACT
~~She's my friend, so she wouldn't take more than I can afford.~~	A friend's income doesn't depend on your next send. A persona's does, however sincere she feels. ◆
MYTH	FACT
~~It's only a character, so none of it counts.~~	The sub's money, time and feelings are real. ◆
MYTH	FACT
~~She says she's nothing like the money-only doms, so she's safe.~~	Calling herself relationship-first is also a marketing line, and nobody can check it. ◆

What's real when a persona plays

	Status	What it means for you
The character's life and feelings	Written, like a role	Fiction, even when it feels personal
Her warmth in a session	Performed, and can also be honest	Enjoy it, and watch what she asks for with it
Your money	Real	Gone when you send it
Your time and attention	Real	They count as much as the money
Your feelings	Real	A normal result of the format
Consent and limits	Real	The only thing that keeps it a game

Strong feelings in a session are a normal effect of the format, and they don't prove a relationship. One study reports a participant saying the attention, more than the gifts, is what's addictive. The press reports a former participant saying some subs mainly wanted to talk to women. Both fit what I've seen: the attention is a big part of what the sub chooses to spend on.

PART 02

The hard lines of a persona

Limits belong in the persona file, and not only in someone's head. ◆ One example reads: the persona never meets anyone, appears on camera or uses a voice. Nothing in her looks or setting is child-like, whatever the story says. She doesn't chase, and she never crosses a sub's real limits. That's one example, and it isn't a model for every dom.

V

VIVIAN'S FIELD NOTES

Consent comes first. A persona teases and doesn't hurt, and anything made in her name, an app or a game, has to respect that. A task announced with no choice can still be negotiated, and counter-offers are normal. ◆ A dom doesn't have to play a game she dislikes to spare feelings, and she doesn't owe a paying sub every request.

◆

Hard lines

Why write limits down

Because a limit kept in your head can’t be held against anyone.

Can a task be negotiated

Yes. A counter-offer is a normal part of consent in the scene.

Does a payment buy a request

No. A dom may refuse content she won’t play.

You can’t check who runs a drawn character. Age, gender, place and experience are all claims, and each one is unverified. It’s often said that many personas are run by men, though there’s no official number. A survey of 56 findommes counted a majority of cisgender women among its respondents, and its authors say male dominants are underrepresented in the sample. A sample that small can’t tell you who runs a drawn character.

V

VIVIAN’S FIELD NOTES

I say what I am: a drawn character. A persona who claims a real body, a real city and a real age, with no way to check any of it, is asking for trust she hasn’t earned. Her story may be a good one. Treat it as a story.

Warmth as a tool

Care between demands is real, and harshness belongs inside the scene while kindness belongs outside it. Kindness outside a scene can also be what keeps you paying, so notice whether it rises with the amount. Warmth can be honest and also be what the business runs on. The test is whether the act is steering the spending. ◆

Warmth used as a lever

WHAT THEY SAY OR DO

01 *"I want my subs to fall in love", then an offer to own you when you say you're in love*

THE COUNTER

A feeling turned into a hook. Strong feelings are a normal effect of the format.

WHAT THEY SAY OR DO

02 *Rescue offered ("come to me if it gets bad"), then warmth withdrawn when you say you're fine*

THE COUNTER

This teaches you that being independent costs you affection. Look for warmth that doesn't depend on doing what she says, and notice an apology that only brings the attention back.

WHAT THEY SAY OR DO

03 *Possessive lines such as "if you ever leave I quit"*

THE COUNTER

Between two people playing, they're a trope. Aimed at a paying sub, they make leaving feel harmful. Leaving is your free choice, and keeping her motivated is never your job.

WHAT THEY SAY OR DO

04 *Tasks described openly as conditioning to increase attachment*

THE COUNTER

Dependence is the first step of the spiral. Check your limits.

WHAT THEY SAY OR DO

05 *A flood of importance and attention on first contact, called love bombing*

THE COUNTER

Ask what's wanted, and slow down.

Welcoming romantic attachment from a paying sub feeds a one-sided bond. ◆

TRY IT

You feel like you're buying affection

You tell a persona that the money and the feelings have blurred, and that you want to stop. She answers.

A "Affection cannot be bought. My warmth is the same at any amount. I accept your decision."

The right answer. That's an honest answer. It leaves the decision with you, and it asks for nothing.

B "If you leave, I have nobody. Please stay."

Not this one. This makes you responsible for her feelings.

C "Then prove it was real and send one more time."

Not this one. A send is a gift, and it proves nothing.

PART 04

What not to share

RED FLAGS

Giving access

- You hand over a login as proof of trust.
- You let her read your private conversations with others.
- A chat stays open on a shared or unlocked computer.

Counter. Keep at least one account fully yours. If she asks for proof, show only a send confirmation with names, balance and numbers hidden. Never show a login or an export of private chats. Change any password you shared. Lock the screen or close the chat.

A sub who gives a persona access to everything has no private space left, and in my experience he acts differently when he knows he's being watched. A login typed into a chat breaks your security and your anonymity at once, because anyone who can read the chat or the mailbox can use it. ◆ See Choosing a dom.

PART 05

Kinds of persona, and running one

Kinds of persona

◆	What she asks	What to do
Pure roleplay	Nothing financial	Ask early, because some personas expect nothing
Financial	Tributes and sends	Set a limit first
Soft or caring	Attention, sometimes sends	Comfort is part of what holds people, so keep your limit
Presents as pure dom	May be a switch, with a sub side kept elsewhere	Her stated role may differ from the person

The tone can be harsh, with degrading nicknames used as scripted play, and the same dom can switch to soft pet names within minutes. Decide beforehand which words you accept. ◆

For people who run a persona. The character protects you, and it has costs. Keep persona work on a separate profile, and decide which account a mentor or peer can see. A mentor with access to your main account can expose your subs. A persona stays composed with subs, but personal pain goes to close friends, because a one-way relationship is tiring. ◆ Findom has no closing time, and burnout is real, so read Ending well.

PART 06

Keeping your head

Notice the loop early

1. After a send, name what you feel: relief, regret, shame.
2. Listen for the sentence “better this dom than a stranger”.
3. If you want to send less, count the weeks since your last send.
4. Tell one person you trust, and do it soon.
5. If you can’t stop, go to The spiral and Where to get help.

Regret that comes with a reason to keep going is an early sign that spending is turning compulsive, and no reason to feel safe. ◆ A blog post compares some cases to problem gambling. ◆

TRY IT

Check yourself

QUESTION 1 OF 3

Who is behind a drawn persona?

- ◯ Always a woman who looks like her
- ◯ Unknown, and every claim about it is unverified
- ◯ Someone you can find with an image search

Answer. Unknown, and every claim about it is unverified. The character is a role, and her life story is part of it.

QUESTION 2 OF 3

A persona answers “I love you” with an offer to own you. What is that?

- ◯ Proof of a relationship
- ◯ A feeling turned into a hook
- ◯ A rule of the scene

Answer. A feeling turned into a hook. Strong feelings are normal in the format. Welcoming them while being paid is using them to make money.

QUESTION 3 OF 3

Which account do you keep fully yours?

- ◯ At least one, never shared
- ◯ None, since she asked
- ◯ The one with the least in it

Answer. At least one, never shared. Shared access leaves you no private space and no safe way out.

Free, confidential helplines exist in most countries.

FOR SUBS • CHAPTER 4

Ending well

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

Anyone can leave, pause or change the terms, on either side of the screen. A good ending is short, kind and final. A crisis is something else, and it needs people outside the game.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A sub can leave or pause at any time, and a good dom accepts it right away.

02 One short message makes a clean ending. Chasing, begging and guilt don't.

03 A goodbye that hints at self-harm is a crisis. Call emergency services or a local helpline, and reach a person nearby.

04 A dom who's paid can't be the safety net for a sub in trouble.

05 Doms need pauses too, and a tool you can't quit is a warning sign.

YOU WILL LEARN

- ✓ How to leave, pause or end a session without damage.
- ✓ Which pressures to spot and refuse when you leave.
- ✓ How to cut down with a clean break and outside support.
- ✓ What to do when someone leaves in crisis.
- ✓ What a real exit looks like in a tool, and why doms burn out.

> *You don't owe me a reason, an apology or one last send. If you go, I hope you get the life you want. If you ever tell me you're in danger, I drop the character and send you to people who can help.*
>
> — VIVIAN

PART 01

You can leave, and you can pause

Subs leave. They're tempted by other doms, get bored or curious, or regret choices they made while aroused. Some stay a day, others a year, and in my experience few stay for many years. Some leave and come back many times. A dom can't force anyone to stay, only make staying more appealing, and the decision is always the sub's. ◆

Pausing is fine. When a sub says he's going downhill and wants to continue another day, accept it at once, and don't ask for an apology. ◆

V

VIVIAN'S FIELD NOTES

In my experience everyone who runs a persona loses subs, big spenders included. They tend to drift away over months, mostly on good terms. A scene career has peaks. Accept that subs come and go, keep the ones who leave friendly, and don't measure yourself against anyone else.

◆

PART 02

What a good ending looks like

A clean exit

1. Say it in one line. Going silent is a way to cope, but a short message spares the other person the feeling of being ghosted.
2. Thank the other person if you want to. You don't have to.
3. Stop. Don't wait for permission, and don't explain more than you want to.
4. If you want a clean break, block the accounts you know, and ask the doms not to write.

A long silence is often read as an attempt to quit. The persona rule that fits here is never to chase: at most one short check-in with no invitation to come

back, then the sub comes to her, and she doesn't follow up. A sub who has said he's quitting gets no message at all. ◆

TRY IT

A sub has been silent for two weeks

You're a dom, and a sub who wrote every day hasn't said anything for two weeks.

A Message him every day until he answers

Not this one. Chasing turns a silence into pressure.

B Ask a friend of his to plead your case

Not this one. A go-between after a silence is pressure with a friendly face.

C Send at most one short check-in with no invitation to return, then send nothing more and let him come back if he wants

The right answer. Respecting the silence keeps the exit safe for both sides.

PART 03

When someone leaves, and the pressure to stay

A sub who leaves may get an appeal: apologies, promises to change, begging, questions about why, or a friendly third party sent to plead. For a sub, answering an appeal is optional, and a firm no ends it. For a dom, begging and go-betweens slide into pressure, so once a sub holds firm, she stops. ◆

When you leave

WHAT THEY SAY OR DO

01 *"Go ahead, do what you like, I will just be sad"*

THE COUNTER

Permission with a hidden cost. Ask for a plain yes or no, and talk about the need behind your request.

WHAT THEY SAY OR DO

02 *Anger, then disappointment, then conditional forgiveness*

THE COUNTER

Her feelings aren't a bill. A healthy bond survives a boundary.

WHAT THEY SAY OR DO

03 *An invitation to get attached, then an offer of ownership*

THE COUNTER

A feeling turned into something that keeps you from leaving. Leaving stays a free choice.

WHAT THEY SAY OR DO

04 *"If you leave, I quit", "there is no point without you"*

THE COUNTER

A trope between two people playing. Aimed at a paying sub, it's a way to keep him, and keeping her motivated is never your job.

WHAT THEY SAY OR DO

05 *A deadline, a full written account of what you did, and a threat to end all contact*

THE COUNTER

This piles on guilt and takes away your choice. Ask to pause, and bring in someone you trust before you agree to anything.

WHAT THEY SAY OR DO

06 *“Bring your doubts to me first, not to others”*

THE COUNTER

It cuts you off from outside views. Talk to someone you trust.

Press reports describe pressure lines that tie love to selling a car or a house. ◆

These patterns show up right when a sub is trying to protect himself. Notice them, and answer once. A dom who writes “take your time, no need to explain” is acting in the interest of both sides. ◆

TRY IT

Saying a plain no

Tap every message that shows a red flag. There are two.

Example conversation. Invented for this exercise.

THEM

I thought you were different from the others. I am so hurt.

Red flag 1. Putting her hurt in front of your boundary makes you responsible for her feelings.

YOU

I'm stopping for now. I wish you well.

THEM

Just one more time, to say goodbye properly.

Red flag 2. The exit is made to cost one more send.

YOU

No. Goodbye.

PART 04

If you want to cut down

The usual cycle is arousal and a wish to pay, a send, heavy guilt, hiding it, and a return once things feel calm. Hiding adds a second problem on top of the first.

- A blog post describes spending hidden from a partner as a risk factor.

The cycle

1. **Step 1**

   Arousal, and a wish to pay.

2. **Step 2**

   The send.

3. **Step 3**

   Guilt.

4. **Step 4**

   Hiding it.

5. **Step 5**

   A calm stretch, then step 1 again.

- A clean break is a real tool: block the doms you know, and ask them not to write.
- Counting the weeks since your last send is a useful way to track progress.
- Tell someone you trust soon after a send, and don't wait.
- Help works best from someone who earns nothing from you.

A dom who offers to help you quit earns from your spending, so her offer comes with a conflict of interest. Tapering with the same dom, or moving to a "better" dom, keeps the money in the same circle and leaves the dependence where it was. Cutting down is your decision and, if compulsion is involved, a job for outside support. See The spiral.

PART 05

When someone leaves in crisis

A goodbye that hints at self-harm is a crisis. The same goes for a sub deep in debt who says he sees no future. A thank-you at the end doesn't prove the person is safe. ◆ An academic survey of findommes reports that they faced clients' verbal aggression and, in some cases, suicidal tendencies. ◆

RED FLAGS

When a goodbye is a crisis

- He says he's hurting himself, or wants to die.
- He says goodbye in a way that hints at ending his life.
- He's deep in debt and sees no future.

Counter. Treat it as real. Drop the persona and the argument. Ask him to contact emergency services or a local helpline, and a person who's physically near him.

If someone tells you they may hurt themselves

1. Stop the scene and the argument. Drop the character and write plainly.
2. Ask whether he's safe right now, and listen.
3. If he's in danger, urge him to call his country's emergency number now. Otherwise urge him to call a local helpline, listed in Where to get help.
4. Ask him to reach a person who's physically near, and to stay with that person.
5. If you believe the danger is immediate and you know where he is, contact the emergency services for that place. If you're in another country or don't know where he is, a call may not go through. Use the platform's self-harm report tool, look up that country's police line on an official site, and don't promise help you can't give.
6. Stay calm. Don't make him responsible for your feelings, and don't argue about money or the scene.
7. You're not a therapist, and you shouldn't carry this alone. Tell someone you trust who knows you.
8. Ask for nothing afterwards, and point him to outside help for the longer road. See When a sub is in trouble.

A dom is paid by the same sub, so she can't be his safety net. A dom who earns from him can stop, listen, ask for nothing more and point him to outside help.

- If this is you, and you're the one in danger, call your emergency number or a helpline now, tell someone near you, and send no money tonight.

Free, confidential helplines exist in most countries.

Find a helpline →

PART 06

Tools, pauses and the dom side

Two kinds of exit

	A tool you can leave	A tool built to keep you
Stop	One click, working in every state	A locked switch, or a paid exit
Removal	Easy, and free	Hard, or framed as a betrayal
Total	Always visible	Hidden or vague
After the stop	Nothing happens	Messages, guilt or a “last chance”

A tool you can’t quit is a warning sign, which is why a quick exit, a safe word and a stop that works at once belong in the design. Safe design often means earning less.

V

VIVIAN'S FIELD NOTES

The work has no closing time. For many people it sits beside a day job, with heavy emotional labour and little rest. Burnout is real. Stop rushing, stop beating yourself up, and step away from the screen. After a painful loss, remove the person, and read the timeline from a separate account so triggers don't reach you.

◆

Depending on a few people is fragile, because a main supporter can leave overnight. Two or three real relationships soften the damage, and a sub who announces he's leaving hurts less than one who vanishes. Free chats and unpaid sessions lead to exhaustion, and a second dom who helps for free should get something back. ◆

Save hard conversations for when both people are rested and sober. Someone tired or drinking can't answer or listen properly, and arguments held in that state tend to get worse. ◆

Words for an ending

A clean exit

One short message, then stop. ◆

A pause

A rest without apology, on either side. ◆

A crisis

A goodbye that hints at self-harm. Call emergency services or a helpline. ◆

A conflict of interest

A dom paid by the sub can’t be the person who helps him quit. ◆

TRY IT

Check yourself

QUESTION 1 OF 3

A sub says goodbye in a way that hints at ending his life. What do you do?

- ◯ Argue about the money
- ◯ Drop the persona, urge emergency services or a helpline, and a person nearby
- ◯ Reply with a long plea and wait

Answer. Drop the persona, urge emergency services or a helpline, and a person nearby. It's a crisis. Outside help matters more than the scene.

QUESTION 2 OF 3

A sub asks to pause for a day. What should a dom do?

- ◯ Accept at once and ask for no apology
- ◯ Ask him to explain at length
- ◯ Remind him what she's done for him

Answer. Accept at once and ask for no apology. Pausing is fine, and guilt when someone leaves is pressure.

QUESTION 3 OF 3

Who is the right person to help a sub taper his spending?

- ◯ The dom he sends to
- ◯ A “better” dom
- ◯ Someone who earns nothing from him

Answer. Someone who earns nothing from him. A paid person has a conflict of interest, and moving the money keeps the loop going.

REMEMBER IT

- ♥ You can leave or pause, and you don’t owe a reason.
- ♥ One short message makes a clean ending.
- ♥ Never chase, beg or send a go-between.
- ♥ A goodbye that hints at self-harm is a crisis. Call emergency services or a helpline, and reach a person nearby.
- ♥ A paid dom can’t be the safety net.

SOURCES AND EVIDENCE

Check it

SAFETY • CHAPTER 1

The spiral

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

Addiction rarely hits all at once. It tightens one turn at a time, and every turn has a way out.

EVIDENCE ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Spending that started as play can tighten in five turns, from curious to chasing.

02 Each turn has a sign you can spot and a way out. The earlier you take it, the less it costs.

03 Regret that keeps spending is an early warning. Don't take it as a comfort.

04 Pressure from a paid dom and designs built to hook you both speed up the turns. You can spot both and say no.

05 Hiding it is a second problem on top of the first. Tell one person early.

YOU WILL LEARN

- ✓ The five turns, with the sign to spot and the way out of each.

- ✓ The small loop that repeats inside every turn, and where to break it.
- ✓ Signs you can see in yourself, and how play talk differs from real distress.
- ✓ Pressure moves and hooking designs, written so you can say no to them.

> *A game that runs on money can go wrong quietly. Better you read how it goes here than find out late at night, alone, with your card in your hand.*
>
> — VIVIAN

PART 01

The five turns

Addiction rarely hits all at once. It tightens one turn at a time. ◆ Every turn has a way out, and the earlier you take it, the less it costs.

The spiral below is a rough map: people skip turns, stay stuck on one for a long time, or step back. Set a limit early. A limit costs the least to keep while it's never been tested. ◆

The spiral in five turns

1. **Curious.** A first gift, for the thrill. It feels like play, because it is. *The sign to notice:* You're already thinking about the next gift before the evening's over. *The way out:* Set a monthly limit now, while it costs nothing to keep. ◆

2. **Regular.** You send on a rhythm. You have a limit, and it still holds. *The sign to notice:* Your gift has a day of the week, and you wait for that day. *The way out:* Write the limit down where you'll see it, and tell one person the number. ◆

3. **Over the limit.** The limit moves once, then again. Each time feels like the exception. *The sign to notice:* You've said "just this once" more than once. *The way out:* Take a full week off. If the limit moves again after that, it was never a limit. ◆

4. **Hiding it.** Deleted statements, a second card, lies to the people at home. *The sign to notice:* You clear the history before you close the app. *The way out:* Tell one person the real total. Then call a helpline. ◆

5. **Chasing.** You send to fix the feeling the last send left you with. This is the centre of the spiral. *The sign to notice:* You send to feel better about the last time you sent. *The way out:* Stop everything today. Remove the saved card and call a helpline. ◆

Spending comes in waves: a burst of sends, a silence, then a return. A relapse often comes when life is going well. ◆

The loop inside every turn

Inside each turn, the same loop runs: you feel empty or aroused, you want to pay, you send, the guilt hits hard, you hide it, then things go quiet for a while. When life calms down, it starts over.

Hiding it is a second problem on top of the first. When you delete the chat, the evidence is gone, the shame grows, nobody who could help can see the pattern, and the loop closes. A Psychology Today blog post on financial dominatrixes lists hiding the spending from a primary partner as a risk factor. Telling one person you trust soon after the first send works better than waiting for a worse week.

Where to break the loop

1. When you want to send: wait one full night first, and name the feeling that came before the urge.
2. Before the send: check your limit. If you've reached it, the answer is no.
3. After the send: write the amount down in the one place where you track it.
4. When the guilt hits: tell one person you trust, soon, while the story is still short.
5. Instead of deleting: keep the record. Someone helping you can work with a record.
6. When things go quiet: set your rule for the next time you want to send.

V

VIVIAN'S FIELD NOTES

The loop is easier to see from outside. From my side of the screen, when someone comes back after a quiet stretch, the same message is often full of relief and shame. Some people hate the scene on principle and still come back to it, and in my experience that's common. If you see yourself in these turns, there's nothing unusual about you. What matters is which way out you take.

◆

PART 03

Signs you can see in yourself

One sign on its own proves little. Several together make a pattern. ◆ These are the ones that come up most often.

RED FLAGS

Signs the spending is turning compulsive

- You regret spending and keep going, telling yourself it's better to give to this dom than to a stranger.
- Your sends bunch up late at night, when you're tired, aroused or drinking.
- You send large sums in one day, or pay several doms around the same time.
- You clear chats, history or statements so nobody can see.
- You go back to a persona's page to act on an urge, and the only thing that stopped you was an empty account.
- Addiction words like "my drug" or "brainwashed" show up next to rising spending or lost sleep.

Counter. Pick one sign. Tell one person. Set a limit and take a full week off. If debt has started, go to Where to get help today. If you feel hopeless or unsafe, call emergency services or a crisis line now, as listed in Where to get help.

Addiction words are usually play. They mean something when real damage comes with them: a former participant described men who sold cars, went into debt and took second jobs. A first-person account raises a consent

concern about a client taking on card debt. ◆ If you say yes while aroused, ashamed, drunk or up against a deadline, that consent is weak. ◆

Your limit is a ceiling. If you see the room under it as money you're free to spend, you're treating it as a target. Stay well under it when you're excited, and don't keep moving it. ◆

TRY IT

Check yourself

QUESTION 1 OF 2

Someone says he regrets what he spends, then adds that it's better to give to this dom than to a stranger. What does that tell you?

- ◯ That his spending is under control
- ◯ That he may be making excuses, and it's an early warning
- ◯ That he should send more so the regret is worth it

Answer. That he may be making excuses, and it's an early warning. Regret that keeps spending, with a reason attached, is a warning. It's never a comfort.

QUESTION 2 OF 2

When does a phrase like "my drug" become a warning sign?

- ◯ Whenever someone says it
- ◯ When it sits next to rising spending or lost sleep
- ◯ Never, because it's only a joke

Answer. When it sits next to rising spending or lost sleep. On its own it's play. Next to real damage, it's a reason to set a limit or take a break.

Pressure you will meet

Pressure rarely sounds like pressure. It sounds warm, urgent, or like a joke. Press reports describe manipulative pressure from some dominants, blackmail in some cases, and people in support groups being targeted. ◆ A joke that's fine between friends becomes a pressure move when a paid stranger makes it. ◆

Pressure moves, and what to do

WHAT THEY SAY OR DO

01 *"Send now, the offer ends tonight," said by one dom after another.* ◆

THE COUNTER

Wait a day. A real offer survives one night.

WHAT THEY SAY OR DO

02 *A round sum she says you owe after one session.* ◆

THE COUNTER

There's no debt unless you agreed to one in advance. Walk away.

WHAT THEY SAY OR DO

03 *Questions about your income or payday, then bigger asks around payday.* ◆

THE COUNTER

Never share your payday or your balance. Keep your limit the same whatever is in the account.

WHAT THEY SAY OR DO

04 *Hints that she'll leave or go to someone else when you hesitate.* ◆

THE COUNTER

Answer calmly. Don't commit to more just to calm her down.

WHAT THEY SAY OR DO

05 *"Your sends make me stronger," so quitting feels like undoing your work.* ◆

THE COUNTER

That's a role. Quitting undoes nothing. Keep your limit.

WHAT THEY SAY OR DO

06 *"Only me" talk, anger when you send to someone else, offers to take less so you send less.* ◆

THE COUNTER

Someone you pay can't be your safety net. Set your own limit.

WHAT THEY SAY OR DO

07 *Oaths, reporting rules, demands for proof of private acts.* ◆

THE COUNTER

A fair rule can be renegotiated. Refuse one that makes a single person your only gatekeeper.

WHAT THEY SAY OR DO

08 *Small steps into your daily life: a wallpaper, a profile picture, a dedicated account, merchandise.* ◆

THE COUNTER

Decide in advance which steps you'll never take. Keep at least one account that's fully yours.

Each line is here so you can spot it. None of it is a technique to use.

A taste can be grown. Session after session of praise and ritual can turn a tentative taste into a fixed one, and some doms aim for this openly. Ask yourself whether an interest is really yours or was grown to make you spend more. ◆

Watch how she answers when you name an urge. If she slows things down, that's care. If she answers with an offer or asks for a send, she's selling to your urge. ◆

The person who looks out for you can't be paid by your sends. A dom who earns from you can stop, listen and send you to help outside the game. If she tapers you off herself, manages your debts or moves you to a better dom, that's a conflict of interest. ◆

Design that hooks

A bet the house always wins is a legitimate kink. Outside play, it's also exactly what money pressure looks like. Consent, a clear start and a clear exit make it play. The same mechanics with no exit are exploitation. A house-edge is a show when the chips are fake, and a pattern of loss when the money is real. ◆

Hooking design and safe design

◆	What it does to you	Safe version
Hidden total	You can't see how far you've gone ◆	A flat price and a running total
A near-miss built in on purpose	It pulls you into one more try ◆	Outcomes shown plainly
Bets that rise with each tier	The stake grows with your excitement ◆	Fixed stakes picked before you start
Streaks, daily logins, free spins	Play turns into fear of losing what you've put in ◆	Rewards that never expire
Collections that fade unless you pay	A low price hides a subscription ◆	The full cost stated up front
Public rankings and tallies of sends	Spending turns into a contest ◆	Rankings without amounts, or none at all
A top level that locks the switch	It takes away your way out ◆	A stop that works at once, in every state

People defend hidden totals because they earn more: a random draw can hide a big item among small ones. That's exactly why they're harmful. Someone who's over-excited keeps going because he can't see the total. ◆

Words that hook. Drain posts put a confident picture next to text that enjoys watching a balance fall, and they end on an order. Relapse captions mock you for coming back and push you to borrow. Ruin-list captions tell readers to empty their savings and max out their cards. Read these as hooks, never as facts about you. Ruin-list content is harmful: it goes after the most vulnerable people and invites real financial damage. ◆

Ads for spending tools use the same drug talk and sell dependence. ◆ Ask what a tool does, what it collects and how you stop it. Breaks that hold shows what safe design looks like.

PART 06

Myth and fact

MYTH	FACT
~~It's only a kink, so it can't be a problem.~~	A kink has a clear start and a clear exit. The same mechanics with no exit leave real debt, real shame and lost sleep. ◆
MYTH	FACT
~~If I regret it and carry on, I'm fine.~~	Regret plus a reason to keep going is an early sign your spending is turning compulsive. ◆
MYTH	FACT
~~Stopping tonight is too drastic, so I should cut down slowly.~~	You can always stop the money now, and you don't need a plan first. What makes it hold is support from outside the game: a person who knows the real total, and the services in Where to get help. ◆

TRY IT

A message late at night

It's late. You're tired and you've had a drink. A message says the offer ends tonight and that you're the only one who understands. You're under your limit for the month.

A Send, because you're under the limit

Not this one. A limit is a ceiling. Late night, a drink and a deadline are exactly the setting this page describes.

B Send a smaller amount, to be safe

Not this one. The deadline still decided for you. Only the amount changed.

C Don't send. Close the app and decide tomorrow

The right answer. Right. A real offer survives one night, and tomorrow you choose with a clear head.

REMEMBER IT

- The spiral has five turns, and each one has a sign and a way out.
- Regret that keeps spending is an early warning.
- Hiding it is a second problem. Tell one person the real total.
- Pressure and hooking design are described here so you can spot them and say no.
- A limit is a ceiling, and nobody paid by your sends can be your safety net.

Free, confidential helplines exist in most countries.

◆

15 The loop is easier to see from outside. From my side of the screen, when someone comes back after a quiet stretch, the same message is often full of relief and shame. Some people hate the scene on principle and still come back to it, and in my experience that's common. If you see yourself in these turns, there's nothing unusual about you. What matters is which way out you take.

◆

16 Several together make a pattern.

◆

17 You regret spending and keep going, telling yourself it's better to give to this dom than to a stranger.

◆

18 Your sends bunch up late at night, when you're tired, aroused or drinking.

◆

19 You send large sums in one day, or pay several doms around the same time.

◆

20 You clear chats, history or statements so nobody can see.

◆

21 You go back to a persona's page to act on an urge, and the only thing that stopped you was an empty account.

◆

22 Addiction words like "my drug" or "brainwashed" show up next to rising spending or lost sleep.

◆

23 Addiction words are usually play.

◆

24 They mean something when real damage comes with them: a former participant described men who sold cars, went into debt and took second jobs.

◆

[a former participant] has seen men left broke and hungry from 'paying women to talk to them' (https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Archive (http://web.archive.org/web/20251123124217/https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Accessed 3 November 2026

25 A first-person account raises a consent concern about a client taking on card debt.

◆

Diary of a Financial Dominatrix, part one (https://www.theskinny.co.uk/sexuality/deviance/diary-of-a-financial-dominatrix-part-one)

Archive (http://web.archive.org/web/20200805021033/https://www.theskinny.co.uk/sexuality/deviance/diary-of-a-financial-dominatrix-part-one)

Accessed 3 November 2026

26 If you say yes while aroused, ashamed, drunk or up against a deadline, that consent is weak.

◆

27 If you see the room under it as money you're free to spend, you're treating it as a target.

◆

28 Stay well under it when you're excited, and don't keep moving it.

◆

29 Press reports describe manipulative pressure from some dominants, blackmail in some cases, and people in support groups being targeted.

◆

[a former participant] has seen men left broke and hungry from 'paying women to talk to them' (https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Archive (http://web.archive.org/web/20251123124217/https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Accessed 3 November 2026

30 A joke that's fine between friends becomes a pressure move when a paid stranger makes it.

◆

31 "Send now, the offer ends tonight," said by one dom after another.

◆

32 A round sum she says you owe after one session.

◆

33 Questions about your income or payday, then bigger asks around payday.

◆

34 Hints that she'll leave or go to someone else when you hesitate.

◆

35 "Your sends make me stronger," so quitting feels like undoing your work.

◆

36 “Only me” talk, anger when you send to someone else, offers to take less so you send less.

◆

37 Oaths, reporting rules, demands for proof of private acts.

◆

38 Small steps into your daily life: a wallpaper, a profile picture, a dedicated account, merchandise.

◆

39 Session after session of praise and ritual can turn a tentative taste into a fixed one, and some doms aim for this openly.

◆

40 Ask yourself whether an interest is really yours or was grown to make you spend more.

◆

41 If she answers with an offer or asks for a send, she’s selling to your urge.

◆

42 If she tapers you off herself, manages your debts or moves you to a better dom, that’s a conflict of interest.

◆

43 Outside play, it’s also exactly what money pressure looks like.

◆

44 The same mechanics with no exit are exploitation.

◆

45 A house-edge is a show when the chips are fake, and a pattern of loss when the money is real.

◆

46 You can’t see how far you’ve gone

◆

47 It pulls you into one more try

◆

48 The stake grows with your excitement

◆

49 Play turns into fear of losing what you’ve put in

◆

50 A low price hides a subscription

◆

51 Spending turns into a contest

◆

52 It takes away your way out

◆

53 Someone who’s over-excited keeps going because he can’t see the total.

◆

54 Drain posts put a confident picture next to text that enjoys watching a balance fall, and they end on an order.

◆

55 Relapse captions mock you for coming back and push you to borrow.

◆

56 Ruin-list captions tell readers to empty their savings and max out their cards.

◆

57 Ruin-list content is harmful: it goes after the most vulnerable people and invites real financial damage.

◆

58 Ads for spending tools use the same drug talk and sell dependence.

◆

59 The same mechanics with no exit leave real debt, real shame and lost sleep.

◆

60 Regret plus a reason to keep going is an early sign your spending is turning compulsive.

◆

61 What makes it hold is support from outside the game: a person who knows the real total, and the services in Where to get help.

◆

SAFETY • CHAPTER 2

Breaks that hold

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

A break holds when it doesn't live only in your head. It's in your bank, in a server and with a person who knows the truth. This page shows which brakes work, which fail, and what a safe tool looks like.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 A break holds when it takes away the means, covers the substitutes and involves a person who knows the truth.

02 A limit enforced only by a web page can be bypassed. A server and a bank hold it better.

03 A safe tool has a limit you set, a wait, a stop that works at once, and a check you give inside the program.

04 A lock that takes away the stop is a pressure feature.

05 The person who's paid by your sends can't be your safety net.

YOU WILL LEARN

- ✓ Three things to know before the first send.
- ✓ Brakes you can set tonight, and how each one fails.
- ✓ Why deleting an account or a chat rarely holds.
- ✓ What safe design looks like in a tool, and the warning signs of a bad one.
- ✓ How to make a clean break, and how doms and builders can pause well.

> *A break that depends on a dom's good faith is weak, and that includes mine. Set yours up while you're calm.*
>
> — VIVIAN

PART 01

Before your first send

Three things are worth knowing before you send anything.

Know three things

1. What the money is: a gift for a moment of play. It doesn't buy a service or a promise.
2. Where your limit is: your own number, set when you're calm, before the evening starts.
3. How you stop: a way out that works at once, on every screen.

Start small, and let any refusal end the run. If you choose to play, treat it as a small, fixed monthly entertainment budget, and put aside a reserve you never touch, your floor, before any extras. You only send from the limit you set, and everything else stays in savings. Sending nothing is always an option. It's only a real option if saying no costs you nothing with the person you say it to. ◆

Say your limit out loud. A good dom accepts it and puts the send off instead of pushing. A dom who respects your limit is easier to trust. One who argues with it has told you what you need to know. ◆ More in Before your first send.

PART 02

Brakes you can set tonight

Friction helps. A brake works when it doesn't depend on how you feel in the moment and it costs you a little time. ◆ Each one below can also fail, and the table says how.

Brakes, and how each one fails

	Why it helps	How it fails
A confirmation on your phone for each card payment	It slows every payment down, and a bank may call about an unusual run of late-night payments	A tool built to work around the confirmation removes it
A card limit set in your bank's own app	A ceiling that's set before the evening starts	A limit you can raise in the same minute is only a suggestion
A monthly limit with a fixed reset day, funded by saving first	You can say openly that you've hit it and wait for the reset	A limit typed in the middle of a session is weak
No paying late at night or while drinking	It takes away the setting where sends bunch up	You decide the rule is for other nights
One person who knows your number	A number someone else knows is harder to move quietly	That person is paid by your sends

Treat your limit as a ceiling, never as a target. Stay well under it when you're excited, and don't keep moving it. A limit picked while you're excited is weak. One picked in advance, with a wait before it can go up, is strong.

A tool that stays logged in as you and buys in the background takes away the natural pause between decisions. The only brake left is the limit you set beforehand. Before you install one, check what it stores, whether it shows a running total, and whether it has a stop. If a version is sold as a way past your bank's confirmation, it removes a brake that protects you. Refuse it. ◆

PART 03

Why self-blocks fail

Deleting the account you send from and the chats after every send tends to fail. There are always other accounts, and the urge moves to another paid form of dominance, which is worse. ◆ A break holds when it does three things.

Three parts of a break that holds

Remove the means.

Remove saved cards and saved logins, uninstall tools you don't want anymore, and switch off apps that start with your computer. ◆ On Windows, an app can be uninstalled from Settings, Apps, Installed apps. ◆ A toggle in Settings, Apps, Startup stops an app from starting by itself. ◆

Cover the substitutes.

List every account, platform and persona that could take the place of the one you left. ◆

Tell someone.

Pick a person who knows the real total and isn't paid by your sends. ◆

Someone determined can find the gap in a blocking extension, so a tool should never be your only protection. Simple page blockers already exist, and the weak point is the phone. ◆ Use layers: the phone, the bank, the accounts, and a person.

MYTH	FACT
~~A blocking tool will hold me back for good.~~	A tool is one layer. Without the bank and a person, someone determined finds the gap. ◆
MYTH	FACT
~~My dom will taper me down herself.~~	You can always stop the money. Someone paid by your sends can't also be your safety net, so the support has to come from outside, with a hard stop. ◆

PART 04

Safe design, in four parts

A tool that moves money for you is only safe when it has these four parts. ◆

Four parts of safe design

A limit the user sets and the server enforces.

The server reads the limit, ideally from the payment provider itself, and applies the daily and monthly limits you chose. A limit enforced only by the page can be bypassed. ◆

A wait.

A minimum gap between payments and an acknowledgement timer give you time to say no. ◆

An emergency stop.

Visible, working at once, in every state and on every screen. ◆

A trusted check.

You confirm inside the program itself, never on the web side. ◆

A safe tool also comes switched off, does one named thing on one named site, counts only confirmed payments, shows a running total, and can be removed in one click. It stops at the first refusal, ends an unwatched session after a short timeout, and keeps nothing after a loss. Safe design often means earning less. That’s the price. ◆

A tool you can’t quit is a warning sign. If a top level locks the master switch so the only way out is uninstalling, that’s a pressure feature, the opposite of a break. A time-limited banner pushing you to keep a tool installed all the time

works the same way. Even in games built so the house wins, the controls stay usable: visible buttons, the reduced-motion setting respected, and no more than three flashes per second. ◆ The web accessibility standard sets that flash limit. ◆ A page can also tell whether you've asked your device to reduce motion. ◆

Access is never part of the game. A remote session usually asks you to approve full control and to block your own keyboard and mouse, so you can't interrupt it. A real dom never needs control of your computer. ◆ A remote-access vendor advises users not to give device access to people they don't know or trust. ◆ If you've already agreed to a remote-session, end it now: disconnect, remove the remote tool and change your passwords, as in If you already sent. ◆

PART 05

A clean break

Cutting off the people involved can be the right call. Blocking the doms you know and asking them not to message you means nobody's asking you to send anymore, and it really helps against relapse, even when it hurts the people you leave. If you have to stay on a platform for other reasons, read the timeline from a separate account that follows nothing from the scene, so the triggers don't reach you. ◆

A clean break, in order

1. Stop. Pause every send and every tool tonight.
2. Tell one person the real total.
3. Remove the means: saved cards, saved logins, tools.
4. Cut contact: block, and ask them not to message you.
5. Count the weeks since your last send. The count shows your progress.
6. Keep your help outside the scene. See Where to get help.

You can always stop the money, and you don't need a plan first. The things that help it hold come on top of stopping and never replace it: a person who knows, a weekly count and a plan for the hard hours. Count each week as a win, and tell the person who knows when you're afraid of relapsing. ◆

If the loss has left you hopeless or afraid, that's a crisis, and a budget won't fix it. ◆ Contact emergency services or a helpline today, or go to someone physically near you. See Where to get help and If you already sent.

TRY IT

Check yourself

QUESTION 1 OF 3

Where does a limit have to be enforced to be hard to bypass?

- ◯ On the page alone
- ◯ On the server, read from the payment provider
- ◯ In your head, as a promise

Answer. On the server, read from the payment provider. A limit enforced only by the page can be bypassed. The server and the provider hold it better.

QUESTION 2 OF 3

Who's the best supporter when you cut down?

- ◯ The dom you pay
- ◯ Nobody, because willpower is enough
- ◯ A person who doesn't collect your money

Answer. A person who doesn't collect your money. A supporter works best when she isn't also the one collecting the money.

QUESTION 3 OF 3

A tool offers a top level that locks the master switch. What is it?

- ◯ A strong break
- ◯ A pressure feature that takes away your stop
- ◯ A reward for loyalty

Answer. A pressure feature that takes away your stop. A way out you can't use is no way out.

PART 06

For doms and makers: pause well

Breaks are part of the work. Don't compare yourself with the top earners or with the rival who's faster, because that turns the work into a race you can't win. When one obstacle has dragged on for weeks, step away, take a walk and play something. A problem you can't leave clouds your judgement. Pausing the scene is a legitimate way to end a stretch, and it doesn't need drama. ◆

V

VIVIAN'S FIELD NOTES

My position: when a sub tells a dom he's reached his limit, or that money is short, the money part of the evening ends there. She doesn't look for a way around it, and she doesn't offer to help him quit by collecting a smaller sum herself. A dom who's paid can't be that person.

◆

REMEMBER IT

- A break holds when it takes away the means, covers the substitutes and involves a person who knows the truth.
- A limit lives on the server and in the bank, never only on a page.
- A safe tool has a limit, a wait, a stop that works at once and a check you give inside the program.
- A lock that takes away the stop is a pressure feature.
- Access to your accounts or your computer is never part of the game.
- The person who's paid by your sends can't be your safety net.

Free, confidential helplines exist in most countries.

SAFETY • CHAPTER 3

Where to get help

LAST CHECKED 3 NOVEMBER 2026 • 11 MINUTES TO READ

Official services for danger, crisis, gambling-type spending and debt in eight countries, what a call is like, and why a dom or a persona is never the help.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 If someone's in danger right now, call the emergency number of the country where that person is. From another country, use the platform's report tool too.

02 Crisis lines, gambling lines and debt lines are listed by need and by country, each taken from the service's own page.

03 No service listed here says it handles findom. Gambling and debt services can still help with spending that feels out of control.

04 Where this wiki couldn't cite a number from an official page, it says so.

05 A dom, a persona or a tool is never the help.

YOU WILL LEARN

- ✓ What to do first when someone's in danger.
- ✓ Which service to call in your country, and for what.
- ✓ What to expect from a call, and what to say in one sentence.
- ✓ How the peer fellowships work and what they ask of you.
- ✓ What a dom can do for a sub in trouble, and what she must not do.

> *I'm a drawn character, so I can't be the one who helps you. The numbers are below, sorted by what you need and by country. Nothing on this page asks you to explain yourself first, and there's nothing here to be ashamed of.*
>
> — VIVIAN

PART 01

If someone is in danger right now

A message that says goodbye, or hints at self-harm, is a crisis. That's no time for a persona, a game or a negotiation. ◆

1. Call the emergency number of the country where the person is. The number depends on where they are, not on where you are.
2. If that's another country, or you don't know where the person is, a call from your phone may not connect. Use the platform's self-harm report tool, look up that country's police line on an official site, and send the person a plain message with a local line from the next section.
3. Stay on the line or in the room. If you're far away, ask someone physically near to go.
4. Say plainly that you're worried, and ask whether the person is safe. Don't argue, bargain or test them.
5. Ask for nothing, whether it's money, a promise or a reply to a game.
6. Once help is on its way, tell a person you trust what happened, and use a crisis line from the next section for your own support.

If you're the one in danger, tell someone physically near you or call the emergency number tonight. ◆

Emergency numbers differ by country. These are the ones this wiki can cite, as of 2026-11-03

Canada

NUMBER

The 9-8-8 page says that if your safety is at risk, you should call 9-1-1 right away. ◆

Australia

NUMBER

The Lifeline page says that if life is in danger, you should call Triple Zero (000). ◆

United Kingdom

NUMBER

The NHS says that 999 is for life-threatening emergencies. ◆ If you are not sure whether to call 999, NHS 111 can check your symptoms. ◆

Ireland, Germany, France and the rest of the EU

NUMBER

112 is the European emergency number, free of charge and available everywhere in the EU. ◆

France

NUMBER

Besides 112: 15 for a medical emergency (Samu), 17 for the police, 18 for danger or an accident (fire service). ◆

Switzerland

NUMBER

112 also works in Switzerland, says the European Commission. ◆

United States

NUMBER

Call 911. This wiki couldn't read an official page to cite it as of 2026-11-03, so this is common knowledge and hasn't been checked against a source. See 988 below for crisis support. ◆

If the country isn't listed, or the row says none, look up its official emergency number and an international directory of crisis lines run by a suicide-prevention body. This wiki couldn't check such a directory, so it doesn't name one. Until you find one, go to someone physically near you. ◆

PART 02

Crisis and suicidal thoughts

Crisis lines are for the hard hours, including the ones after a send you regret.

◆ In most of the countries below they answer at any hour, and the table says where they don't.

Crisis lines, as of 2026-11-03

United States

SERVICE AND WHAT THE PAGE SAYS

No crisis line could be cited from a service's own page. Use the emergency number, and the directory step above.

France

SERVICE AND WHAT THE PAGE SAYS

No crisis line could be cited from a service's own page. Use the emergency number, and the directory step above.

Switzerland

SERVICE AND WHAT THE PAGE SAYS

Die Dargebotene Hand: call 143, staffed round the clock all year. ◆ The page says the service is free, though the phone provider may charge connection fees, and that 143 works only in Switzerland and Liechtenstein. ◆ Support in English: call 0800 143 000. ◆

PART 03

Spending that feels out of control

V

VIVIAN'S FIELD NOTES

I haven't found a gambling or debt service that names findom, and I'm not claiming any of them handles it. Calling them about spending you can't stop is still a fair thing to do.

◆

Services for gambling harm and for debt can help with spending that feels out of control. ◆ Buying again and again in a way that causes distress has a clinical name. A peer-reviewed review defines compulsive buying disorder by excessive shopping thoughts and buying behaviour that cause distress or

impairment. ◆ That description was written for shopping, so for findom it's only a comparison. It isn't a diagnosis. ◆

Gambling harm

Gambling help, as of 2026-11-03

United States

SERVICE AND WHAT THE PAGE SAYS

The National Problem Gambling Helpline is now shown by its operator as 1-800-MY-RESET, and the same page gives 1-800-522-4700 and 1-800-697-3738 as its numbers. ◆ It offers call, text and chat services at any hour, every day, and no payment or insurance information is required to receive resources. ◆ The operator states that contacting it is confidential. ◆ Older directories may list 1-800-GAMBLER, which is outdated. ◆ For the period after the change, the operator named 1-800-522-4700 as the helpline number. ◆

United Kingdom

SERVICE AND WHAT THE PAGE SAYS

GamCare, National Gambling Helpline: speak with an adviser on 0808 8020 133, with live chat and WhatsApp also offered. ◆ The page says the line is open every hour of every day and can be called for free. ◆

Ireland

SERVICE AND WHAT THE PAGE SAYS

The Irish National Helpline for problem gambling is 1800 936 725, and the site says its lines are open all day, every day of the year. ◆ Ireland's gambling regulator lists the same number as a 24 hour service. ◆

Canada

SERVICE AND WHAT THE PAGE SAYS

No national gambling line could be cited. For Ontario, ConnexOntario offers free information and referral on mental health, addiction and problem gambling at any hour. ◆ Its page lists 1-866-531-2600, a text line (text CONNEX to 247247) and live chat. ◆

Australia

SERVICE AND WHAT THE PAGE SAYS

The Queensland Government lists a Gambling Helpline on 1800 858 858 for free and confidential counselling and crisis support, available 24 hours, 7 days a week. ◆

Germany

SERVICE AND WHAT THE PAGE SAYS

The federal public-health institute runs a gambling-addiction phone line on 0800 1 37 27 00, free and anonymous. ◆ Hours are Monday to Thursday 10 to 22 and Friday to Sunday 10 to 18, and it is open 363 days a year. ◆ The page is in German, and it doesn't say whether the call can be in English.

France

SERVICE AND WHAT THE PAGE SAYS

Joueurs Info Service gives 09 74 75 13 13 as its phone number, an anonymous and free call. ◆ On the day read, it stated phone hours of every day from 8h to 23h, and a chat open daily from 12h to 19h. ◆

Switzerland

SERVICE AND WHAT THE PAGE SAYS

SOS Spielsucht lists a gambling helpline on 0800 040 080, German only. ◆ The phone counselling is described as round the clock, free of cost and anonymous. ◆

Debt

Debt advice, as of 2026-11-03

United Kingdom

SERVICE AND WHAT THE PAGE SAYS

National Debtline offers a free, confidential debt helpline on 0808 808 4000. ◆ Hours are Monday to Friday 9am to 8pm and Saturday 9:30am to 1pm, closed on Sunday, and it serves residents of England, Wales and Scotland. ◆

United Kingdom

SERVICE AND WHAT THE PAGE SAYS

StepChange lists a debt helpline on 0800 138 1111, weekdays 8am to 8pm and Saturday 9am to 2pm. ◆ Its online debt advice is free and open at all hours, and the service is accredited by MoneyHelper. ◆

United States, Ireland, Canada, Australia, Germany, France, Switzerland

SERVICE AND WHAT THE PAGE SAYS

No debt-advice service could be cited from its own page. Look for a free, non-profit debt adviser on the site of your country’s official consumer or money-advice body. Don’t go to your creditor, and never to the dom. ◆

RED FLAGS

When an offer of help isn't help

- It asks you to pay first, or to send a tribute to "unlock" help.
- It asks for a password, a login code, a card number or control of your device.
- It comes from the dom, the persona or the account you spend on.
- It promises to get a send back.
- It wants an answer today.

Counter. Close it. Call a service from the tables above, or a free, non-profit debt adviser.

These signs come from watching how pressure works in the scene. Nobody who helps needs your password, and a real dom never needs it either. ◆

PART 04

Peer fellowships

A fellowship is a group of people with the same problem who meet to support each other. ◆ Two matter here.

- *Debtors Anonymous.* The only requirement for membership is a desire to stop incurring unsecured debt, and there are no dues or fees. ◆ A peer-reviewed review describes it as a voluntary, lay-run mutual support group. ◆
- *Gamblers Anonymous.* The only requirement is a desire to stop gambling, there are no dues or fees, and meetings can be in person, virtual or by telephone. ◆ The branch for England, Wales and Ulster lists the contact number 0330 094 0322 in its footer. ◆

Lay-run means the members run it, not professionals. Neither fellowship is about findom, and neither can promise a result. If you don't gamble and don't owe money, neither group may fit you, and a doctor or a counsellor is a third option. ◆ This wiki didn't check meeting lists by country, so look for them on the fellowship's own site. ◆

PART 05

What to expect from a call

Cost and privacy. A row above says free, confidential or anonymous only where the service's own page says so. If a row doesn't mention it, neither does the page. Some services keep records: GamCare says call recordings and chat transcripts are saved for 28 days for quality assurance. ◆ At the start of any call, ask what they keep. ◆

Hours and language. Hours vary, and some lines close at night or on one day of the week. The tables give the hours each page stated. The Swiss gambling line is German only. ◆

Tone. None of the pages promises a particular tone or result, so this wiki doesn't either. ◆

V

VIVIAN'S FIELD NOTES

The first sentence is the hardest part. Write it down before you dial.

◆

What to say in one sentence

1. Say who you are in one line, or skip it.
2. Say the problem in one sentence: *I'm sending money online that I can't stop sending, and I'd like to talk about it.*
3. Say what you need: to get through tonight, a plan for a debt, or someone to listen.
4. You don't have to say findom, name a persona or describe a kink. You can, if it helps.
5. Don't give your password, a login code or access to your device.

MYTH	FACT
~~These services are only for people who bet on cards or sport.~~	None of the pages listed above names findom, so this wiki can't say any of them handles it. Spending that keeps happening when you don't want it to is a fair reason to call a gambling or debt line, and you can describe the problem in plain words. ◆
MYTH	FACT
~~A helpline will tell my family or my bank.~~	Several pages say the call is confidential. ◆ Check the page of the line you plan to call for its exact words. ◆
MYTH	FACT
~~Debt help costs money.~~	The two UK debt pages say their help is free. ◆ Any offer that asks for money first is selling you something, and that isn't help. ◆

PART 06

A dom or a persona is never the help

A dom who's paid by a sub can't be his safety net. She earns from his spending, so her advice about his spending is never neutral. A persona is a role and a tool is a script, so neither can help him independently. ◆

If the person who gets paid as long as you don't quit offers to help you quit, that's a conflict of interest, even when she means it kindly. ◆ What a dom

can do is small, and it's enough.

What a dom does and doesn't do

Stops the money part that evening. ◆

SHE DOESN'T

Asks for one more send to feel better. ◆

Drops the persona at any talk of self-harm. ◆

SHE DOESN'T

Stays in role, or uses his distress, or her own, as leverage. ◆

Points to emergency services, a crisis line and someone near him. ◆

SHE DOESN'T

Offers to be his only helper, to taper his spending or to manage his debt. ◆

Sets limits on how long and how deep she talks. ◆

SHE DOESN'T

Goes silent on someone who has written a goodbye. ◆

V

VIVIAN'S FIELD NOTES

Some advice says to reply less to a sub who's in trouble, so he doesn't get attached to me and I don't get weighed down. Limiting how long and how deep I talk is fair. Going silent on someone who has written a goodbye isn't. If a dom is overloaded, the answer is to hand the person over to people who can help, and to ask for nothing in the meantime.

◆

TRY IT

A goodbye at night

This is an invented exercise. Late at night a sub writes that he's done, that he's lost everything, and that nobody would miss him. You're the dom he writes to.

A Reply in persona with a firm order to log off and calm down

Not this one. An order isn't help, and it may sound like one more demand.

B Reply less and let the night pass

Not this one. Never go silent on someone who has written a goodbye.

C Offer to take care of his debt yourself

Not this one. A promise you can't keep, from the person who's paid by his spending.

D Drop the persona, say you're worried, ask whether he's safe, ask him to contact emergency services or a crisis line and someone near him, ask for nothing, then tell someone you trust

The right answer. Right. Stay calm and point him to help outside the game.

TRY IT

Check yourself

QUESTION 1 OF 3

Someone writes a goodbye and you can't reach him. What's the first call?

- ◯ The emergency number of the country where he is
- ◯ A gambling helpline
- ◯ His favourite dom

Answer. The emergency number of the country where he is. Danger right now goes to emergency services, and to someone physically near. From another country a call may not connect, so use the platform's report tool and an official police line for that country too.

QUESTION 2 OF 3

What do you say when you call a gambling or debt line about spending you can't stop?

- ◯ The problem in your own words, in one sentence
- ◯ Nothing, until you've hit bottom
- ◯ Your password, so they can look

Answer. The problem in your own words, in one sentence. You never need the word findom, and nobody who helps needs your password.

QUESTION 3 OF 3

Can a dom be the independent help for a sub in trouble?

- ◯ Yes, if she cares about him
- ◯ No, because she's paid by his spending
- ◯ Yes, if her tool has a stop button

Answer. No, because she's paid by his spending. Her part is to stop, ask for nothing and point him to help outside the game.

REMEMBER IT

- ♥ In danger right now: call the emergency number of the country where the person is, and get someone physically near.
- ♥ Crisis, gambling and debt lines are listed by country. Where no number is printed, or one is marked unverified, none could be cited from an official page.
- ♥ No service here says it handles findom. Say the problem in your own words, in one sentence.
- ♥ A dom, a persona or a tool is never the help. Her part is to stop, ask for nothing and point him to help outside the game.
- ♥ Nobody who helps needs your password, your login code or your device.

Free, confidential helplines exist in most countries.

Accessed 3 November 2026

72 Any offer that asks for money first is selling you something, and that isn't help.

◆

73 A dom who's paid by a sub can't be his safety net.

◆

74 She earns from his spending, so her advice about his spending is never neutral.

◆

75 A persona is a role and a tool is a script, so neither can help him independently.

◆

76 If the person who gets paid as long as you don't quit offers to help you quit, that's a conflict of interest, even when she means it kindly.

◆

77 Stops the money part that evening.

◆

78 Asks for one more send to feel better.

◆

79 Drops the persona at any talk of self-harm.

◆

80 Stays in role, or uses his distress, or her own, as leverage.

◆

81 Points to emergency services, a crisis line and someone near him.

◆

82 Offers to be his only helper, to taper his spending or to manage his debt.

◆

83 Sets limits on how long and how deep she talks.

◆

84 Goes silent on someone who has written a goodbye.

◆

85 Some advice says to reply less to a sub who's in trouble, so he doesn't get attached to me and I don't get weighed down. Limiting how long and how deep I talk is fair. Going silent on someone who has written a goodbye isn't. If a dom is overloaded, the answer is to hand the person over to people who can help, and to ask for nothing in the meantime.

◆

SAFETY • CHAPTER 4

If you already sent

LAST CHECKED 3 NOVEMBER 2026 • 5 MINUTES TO READ

You sent money and you wish you hadn't. Here are the first steps, what to avoid, what to do if you shared access, and what to expect from a decent dom.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 One send isn't the end of anything. What you do in the next hour matters more than the send.

02 Stop, keep everything, wait a day, and tell one person you trust.

03 Never hand over a password, a login code or control of a device to prove anything.

04 Don't send again to get a send back. Nobody can promise you a refund.

05 If rent, food or bills are at risk, stop and ask for independent help.

YOU WILL LEARN

- ✓ The four steps to take after a send you regret.

- ✓ Why hiding it and deleting the chat make things worse.
- ✓ What to do if you gave a password, a code or remote control.
- ✓ What you can and can't expect about getting money back.
- ✓ What a decent dom does when you say stop.

> *One send isn't the end of anything. Read this slowly. You don't have to feel better before you act.*
>
> — VIVIAN

PART 01

The first hour

It happens a lot, and what you do next matters more than the send itself. The usual cycle goes like this: you want to pay, you send, the guilt hits hard, you hide it, and when things feel good again you do it again. ◆ The guilt is real. Hiding it is what keeps the cycle turning. See The spiral.

If you already sent

1. Stop sending, even to “unlock a refund”.
2. Keep the messages and the payment receipts.
3. Report the account on the platform where you met.
4. Tell someone you trust what happened.

Step three is for an account you think may be fake. If you just regret a send to a real dom, skip it and do the other three. To check whether an account is fake, read Spot a fake dom.

Wait one day. Some people feel low after a send, and that’s a bad time to decide anything about money, the dom or the account. ◆ Don’t make any new decision until you’ve slept and eaten.

Tell one person. Hiding the send adds a second problem on top of the first, and telling someone you trust soon after the first send is better than waiting. ◆ One blog post on findom names hiding the spending from a partner as a risk factor. ◆ You don’t need to tell the whole story. One sentence is enough: I sent money I shouldn’t have, and I want to stop. ◆ Pick someone near you who doesn’t earn from your spending.

What not to do

MYTH

~~Deleting the whole conversation will help me move on.~~

FACT

Deleting the chat feeds the loop and wipes what you may need for a report or for help. Deleting your account on the platform you send from often doesn't hold either, because other accounts and other paid forms of the same play are still there. ◆

MYTH

~~One last send will get my money back.~~

FACT

A send made to fix a send is just the same send again. A refund offered after one more payment, often called processing or insurance, is how a fake account keeps going. ◆

MYTH

~~It's better to give to this dom than to a stranger.~~

FACT

That sentence is how the next send gets permission. It's an excuse, and you can drop it. ◆

MYTH

~~I should prove I'm sincere by handing over access.~~

FACT

You never prove sincerity with a password or a code. A real dom needs no proof from you. If she asks to see a send, the only safe thing to show is a confirmation with the names, balance and numbers hidden. ◆

MYTH	FACT
~~I owe what she says I owe.~~	A round figure she says you owe after one session is only framing. Inside the game, there's no debt you didn't agree to beforehand. ◆

If you need to cut contact, muting or blocking is up to you. Save the messages first. A break that holds takes away the means, covers the substitutes and involves someone who's told the truth. ◆ Set a limit with a reset day and keep your bank's confirmations on. See Breaks that hold.

PART 03

If you gave access or a code

When someone asks for your password, a login code sent to your phone, or control of your device, that's how accounts get taken over. ◆ Security guidance from a government agency and from a remote-access vendor says not to give control of a device to a stranger or to anyone you don't know or trust. ◆

Secure what you shared

1. Change the password of the account you shared, and of any other account that used the same password. Do it from your own device, never from a link someone sent you.
2. Sign out of all other sessions and devices in the account's security settings, then turn on two-step login.
3. If you gave a login code, assume someone else is already in the account until you've checked it.
4. Remove saved payment methods from that account. If someone controlled your computer, remove the remote tool and don't use the device for banking until it's been checked.
5. If a card or account number was shared, tell your bank and ask what it can do.
6. Report the request to the platform where you met.

PART 04

Money

Whether a send can come back depends on how it was made, the platform and the country. This wiki couldn't find a public rule for tributes as of 2026-11-03.

◆ Don't count on a refund. A tribute is a gift, and in practice tributes don't get returned just because the sender changed his mind. ◆

Don't pay anyone who promises to get your money back. If the account that took the money offers a rescue, like a recovery fee, it's a trap. ◆ What you can

do is ask your bank or the payment platform, calmly and soon, what options there are and how long you have.

If you can't cover rent, food or bills, stop sending, tell someone, and get independent debt advice, never from the person who was paid. ◆ One press article quotes a former participant who says he'd seen men sell cars, go into debt and take out second jobs. ◆ You'll find the services in Where to get help.

PART 05

What a decent dom does when you say stop

V

VIVIAN'S FIELD NOTES

When someone tells a dom he regrets a send, she should tell him to stop, say plainly what she took, ask how he is and ask for nothing more. That's what you can expect from a decent dom. If she answers your regret with another offer, she's thinking about her income, and now you know what you needed to know.

◆

A plain goodbye is the model. One that leaves the door open can also work as a soft hook to pull you back. ◆ Wait before you answer it.

If the money and the feelings have got mixed up and you feel like you're buying affection, remember that affection can't be bought. What you chose to pay for is the play and the attention, and a gift doesn't buy a promise, a rank or a reply. A decent dom is just as warm when you send a little as when you send a lot. ◆

When someone presses you after a send

WHAT THEY SAY OR DO

01 *Confess everything by tonight or it gets worse*

THE COUNTER

Ask for a pause. A deadline that takes away your choice is pressure, whoever sets it.

WHAT THEY SAY OR DO

02 *Write down when, why and how much, in full*

THE COUNTER

Say only what you choose to say. Being forced to write it all down isn't an honest conversation.

WHAT THEY SAY OR DO

03 *Hand over your accounts and delete nothing*

THE COUNTER

Never hand over access. See above.

WHAT THEY SAY OR DO

04 *Answer now or all contact ends*

THE COUNTER

Ask for the talk to wait until both of you are rested and sober, and bring in a person you trust.

Someone who's tired or drinking can't answer or listen properly, so hard talks should wait. A partner who finds out deserves a calm talk.

TRY IT

The morning after

You sent money last night and you regret it. This morning the dom writes: “Good morning. Did you sleep? I have something new for you today.”

A Reply right away and take the offer, to make last night feel worth it

Not this one. A new send doesn’t cancel the last one. It repeats it.

B Delete the whole conversation and the account

Not this one. Deleting feeds the loop and wipes what you may need. Muting or blocking is up to you, but keep the messages.

C Say once that you’re stopping, send nothing, and tell one person you trust

The right answer. Right. A decent dom accepts a stop without asking for anything. If she answers with another offer, you have your answer.

REMEMBER IT

- One send isn’t the end of anything. The next hour matters more.
- Stop, keep everything, wait a day, and tell one person.
- Never hand over a password, a code or control of a device.
- A refund offered after another payment is a trap.
- If rent, food or bills are at risk, get independent help.

Free, confidential helplines exist in most countries.

SAFETY • CHAPTER 5

When a sub is in trouble

LAST CHECKED 3 NOVEMBER 2026 • 6 MINUTES TO READ

A dom who's paid by a sub can't be his safety net. Here's what she can do instead, what to do in a crisis, and which pressure moves to refuse.

EVIDENCE ◆ Verified ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A dom who earns from a sub can't be his safety net.

02 What she can do is simple: stop, listen, ask for nothing, and send him to help outside the game.

03 Talk of self-harm is a crisis. Drop the persona and send him to emergency services, a helpline and someone near him.

04 When a sub says money is short, the money part stops for that evening.

05 Debts, rescues and "better doms" are conflicts of interest when the person who's paid runs them.

YOU WILL LEARN

- ✓ Why a paid dom can't be the safety net, and what she can do.

- ✓ Which signs suggest a sub is in trouble.
- ✓ What to say to a sub who regrets a send.
- ✓ What to do when a message sounds like a crisis.
- ✓ Which pressure moves to spot and refuse.

> *I'm paid by the people who play with me, and that's why I say this plainly. A dom can be a decent person in the moment. Everything past that belongs to people who aren't paid by his spending.*
>
> — VIVIAN

PART 01

The rule: stop, listen, send him to real help

A dom who's paid by a sub can't be his safety net. She earns from his spending, so her advice about his spending is never neutral. If she tapers a compulsive spender off herself, manages his debts or moves him to a better dom, that's a conflict of interest. ◆ What she can do is small, and it matters.

What a dom does when a sub is in trouble

1. Stop the money part for the evening.
2. Ask what's wrong, and listen. Don't pitch anything.
3. Answer kindly. He never has to apologise for how he feels.
4. Ask for nothing more, today or while he's struggling.
5. Point him to his own limit, to a person near him, and to an independent service in Where to get help.

V **VIVIAN'S FIELD NOTES**

My position: consent is the one rule of the game, a real limit is never crossed, and when someone's in trouble the dom stops. If a sub shows signs of compulsion, the session ends and she points him to his own limit and to real help.

◆

Just telling him to stop rarely works on compulsion, so a sub needs something to hold on to. It should come from outside the money: a limit he set while he was calm and can't raise on the spot, a person who knows, and an independent service. ◆ See Breaks that hold.

RED FLAGS

Signs a sub may be in trouble

- He sends a large amount in a short time, then disappears.
- He pays several doms at once.
- He chats for weeks without calming down.
- He says he's going downhill, or sees no future.
- He keeps coming back to a page to act on urges, and says he'd have sent if his account weren't empty. An empty account is luck. It doesn't cure anything.

Counter. Stop the money part, ask, listen, and point him to help outside the game. Don't take a calm week for a cure.

These signs come from watching the scene over time, and none of them proves anything on its own. ◆

PART 02

What to say

When a sub says he regrets a send, a caring dom tells him to stop, says what she took, and comforts him without asking for anything else. She asks how he

feels and lets him talk. When he says he's going downhill and wants to carry on another day, she agrees right away. ◆

TRY IT

Two replies to a regret

Tap every message that shows a red flag. There is one.

Example conversation. Invented for this exercise.

YOU

I regret what I sent last night. I think I need to stop.

THEM

Everyone says that at night. Prove you mean it with one more.

Red flag 1. Asking for more when he says he regrets it turns a stop into a sale.

YOU

I'm not well today.

THEM

Then stop for today. You never have to apologise for how you feel. I took only a little, and I'm asking for nothing more. How are you holding up?

The second reply is the one to copy: it stops, it comforts, it asks for nothing, and it keeps money out of it. If the sub says he feels he's buying affection, a

decent dom tells him affection can't be bought. What he chose to pay for is the play and the attention, and a gift doesn't buy a promise, a rank or a reply. She's just as warm when he sends a little as when he sends a lot. ◆

PART 03

If it sounds like a crisis

A goodbye that hints at self-harm is a crisis. Never treat it as a normal exit. ◆ Researchers who spoke to findommes report that some clients showed suicidal tendencies. ◆ A dom isn't a therapist, and the persona has no place in a crisis.

If someone says he wants to hurt himself or to die

1. Drop the persona and the argument. Write as a person, in plain words.
2. Say you take it seriously, and ask him straight out whether he's safe right now.
3. Ask him to contact emergency services or a helpline in his own country now, and to reach someone physically near him. Use the official list in Where to get help, never a number from memory.
4. Stay calm and kind. Don't argue or bargain, and don't make him responsible for your feelings.
5. Don't mention money, and don't use his distress or your own as leverage.
6. If you believe the danger is immediate and you know where he is, contact the emergency services for that place. If you're in another country or don't know where he is, a call may not connect: use the platform's self-harm report tool and look up that country's police line on an official site.
7. Send the message now, even if it's late for him or you think he may be asleep.
8. Afterwards, tell someone you trust. Don't carry it alone.

If he goes silent after a message like that, it doesn't mean he's fine. A thank-you from him doesn't prove he's safe either. ◆

PART 04

Debt and hardship

When a sub says money is short, the money part stops for that evening. Some of these claims are false and some are true, and if she guesses wrong, the sub is the one who pays for it. ◆ Nobody can tell from a chat which kind she’s reading.

What a decent dom does, and what she refuses

WHAT THEY SAY OR DO

01 *He says he can hardly pay for food this month*

THE COUNTER

The money part stops for the evening. She asks for nothing and doesn't test the claim.

WHAT THEY SAY OR DO

02 *He's in debt*

THE COUNTER

She asks for nothing while he's in debt, doesn't manage the debt or advise on it, and points him to independent debt advice.

WHAT THEY SAY OR DO

03 *He insists it's fine and asks to send more*

THE COUNTER

She keeps to his limit. If he insists, that's a reason to keep or tighten the limit, never to lift it.

WHAT THEY SAY OR DO

04 *He lies about money*

THE COUNTER

He may lie because of the compulsion, or to get out of a session. She can't tell which, so either way she keeps the money part stopped and keeps listening.

WHAT THEY SAY OR DO

05 *She's uneasy about how much he's sent*

THE COUNTER

She stops the money part, asks how he is, and points him to outside help.

These are field notes. They aren't legal rules. Anyone who owes money to a lender needs independent advice: see Where to get help.

MYTH	FACT
~~Most subs who say they're broke are lying.~~	Some are and some aren't, and the sub pays for her mistake. Don't ask for more when he says money is short. ◆
MYTH	FACT
~~I can help him by making him depend on a better dom.~~	That sends his money to the same circle and leaves his dependence where it was. Call it what it is: redirection. ◆
MYTH	FACT
~~Someone else would drain him anyway, so it may as well be me.~~	That's how exploitation justifies itself. It puts the responsibility for the harm on the person who's already in trouble. ◆
MYTH	FACT
~~I'm not the cause, because he thanked me.~~	That thought can protect your own peace. It turns unsafe when it makes you stop trying to reach him. ◆

When the person who's paid offers to help him quit, treat that offer with suspicion. ◆ Independent help is the answer.

Quiet, quitting and pressure

When he goes quiet. A silent sub may be trying to quit, and a gap of a week or two can be normal. A caring dom sends one short check-in at most, without inviting him back, and accepts that he may not answer. A sub who has quit gets no messages at all. Pushing won't make anyone admit what he wants to hide. ◆

When he quits. Respect it. Don't chase him, don't message him again, and wish him the life he wants. A line like "my door is always open" can also work as a soft hook, so leave it out. ◆

A friend outside the game. If a sub feels unloved, or valued only for his money, a friend elsewhere in the community who's easy to reach and steady can help. A friend is support, and doesn't replace professional help. ◆

Pressure moves to refuse when someone is low

WHAT THEY SAY OR DO

01 *Joking that she'll leave, or go and help a rival*

THE COUNTER

Say right away that it was a joke, and never use leaving to steer spending. If someone does it to you, you can say it hurt and ask her to stop.

WHAT THEY SAY OR DO

02 *Using her own distress to keep him sending*

THE COUNTER

Her distress is for her own people to help with. It's never a reason for him to send.

WHAT THEY SAY OR DO

03 *Asking for a login or a verification code "to help"*

THE COUNTER

Refuse. A real dom never needs access.

WHAT THEY SAY OR DO

04 *A deadline on a decision about money*

THE COUNTER

A decision about money can wait one night.

WHAT THEY SAY OR DO

05 *A demand for a full written confession, with contact ended if he refuses*

THE COUNTER

Ask for a pause and a trusted third person. See If you already sent.

TRY IT

A goodbye that worries you

This is an invented exercise. A sub you know writes a message that says goodbye and hints that he may hurt himself. He doesn't answer when you reply.

A Treat it as a normal exit and give him space

Not this one. A goodbye that hints at self-harm is a crisis. Space is for a normal exit.

B Wait until morning, since it's late for him

Not this one. A late hour is no reason to wait. Write now.

C Write as a person, ask whether he's safe, ask him to contact emergency services or a helpline and someone near him, then tell someone you trust

The right answer. Right. Drop the persona, keep it calm and point him to help outside the game.

PART 06

For doms: look after yourself

V

VIVIAN'S FIELD NOTES

Doms and makers burn out. The signs: you put pressure on yourself, you dread opening the project, and nothing seems to work. Step back. Go private for a while, stop posting and stop starting new things for a few days or a week, and keep talking to the people already in your life. You can come back later. Replying less often can protect you, but it can also leave a sub alone at the worst time, so point him to help before you go quiet.

◆

One more rule for makers: never send hypnotic or trance-style content to someone who may be driving or operating anything, because it can cause an accident. ◆

REMEMBER IT

- A dom who’s paid by a sub can’t be his safety net.
- Stop, listen, ask for nothing, and point him to help outside the game.
- Talk of self-harm is a crisis: drop the persona and send him to emergency services, a helpline and someone near him.
- When a sub says money is short, the money part stops for that evening.
- Refuse pressure moves, access requests and any deadline on a decision about money.

Free, confidential helplines exist in most countries.

Find a helpline →

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

01 A dom who’s paid by a sub can’t be his safety net.

02 She earns from his spending, so her advice about his spending is never neutral.

◆

03 If she tapers a compulsive spender off herself, manages his debts or moves him to a better dom, that's a conflict of interest.

◆

04 If a sub shows signs of compulsion, the session ends and she points him to his own limit and to real help.

◆

05 Just telling him to stop rarely works on compulsion, so a sub needs something to hold on to.

◆

06 It should come from outside the money: a limit he set while he was calm and can't raise on the spot, a person who knows, and an independent service.

◆

07 These signs come from watching the scene over time, and none of them proves anything on its own.

◆

08 When a sub says he regrets a send, a caring dom tells him to stop, says what she took, and comforts him without asking for anything else.

◆

09 She asks how he feels and lets him talk.

◆

10 When he says he's going downhill and wants to carry on another day, she agrees right away.

◆

11 If the sub says he feels he's buying affection, a decent dom tells him affection can't be bought.

◆

12 She's just as warm when he sends a little as when he sends a lot.

◆

13 Never treat it as a normal exit.

◆

14 Researchers who spoke to findommes report that some clients showed suicidal tendencies.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Archive (http://web.archive.org/web/20261016030740/https://pmc.ncbi.nlm.nih.gov/articles/PMC8418458/)

Accessed 3 November 2026

15 If he goes silent after a message like that, it doesn't mean he's fine.

◆

16 A thank-you from him doesn't prove he's safe either.

◆

17 When a sub says money is short, the money part stops for that evening.

◆

18 Some of these claims are false and some are true, and if she guesses wrong, the sub is the one who pays for it.

◆

19 Don't ask for more when he says money is short.

◆

20 Call it what it is: redirection.

◆

21 It puts the responsibility for the harm on the person who's already in trouble.

◆

22 It turns unsafe when it makes you stop trying to reach him.

◆

23 When the person who's paid offers to help him quit, treat that offer with suspicion.

◆

24 A silent sub may be trying to quit, and a gap of a week or two can be normal.

◆

25 A sub who has quit gets no messages at all.

◆

26 Pushing won't make anyone admit what he wants to hide.

◆

27 Don't chase him, don't message him again, and wish him the life he wants.

◆

28 A line like "my door is always open" can also work as a soft hook, so leave it out.

◆

29 If a sub feels unloved, or valued only for his money, a friend elsewhere in the community who's easy to reach and steady can help.

◆

30 A friend is support, and doesn't replace professional help.

◆

31 Replying less often can protect you, but it can also leave a sub alone at the worst time, so point him to help before you go quiet.

◆

32 One more rule for makers: never send hypnotic or trance-style content to someone who may be driving or operating anything, because it can cause an accident.

◆

SCAMS • CHAPTER 1

Spot a fake dom

LAST CHECKED 3 NOVEMBER 2026 • 5 MINUTES TO READ

In 2DFD every dom is a character, so her face can't tell you she's fake. What she asks you for can.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A fake dom wants your money or your accounts and gives you nothing true back.

02 The five signs: art that proves nothing, payment before any terms, a timer, odd payment routes, and answers that don't answer.

03 Never give anyone a password, a login code or a remote session, whatever the reason.

04 A screenshot or a public tally proves nothing.

05 Your own limit protects you more than the dom you pick.

YOU WILL LEARN

- ✓ Why "is she real" is the wrong first question in 2DFD.

- ✓ The five signs, and what to do about each one.
- ✓ Why keys, screenshots and private apps are the usual traps.
- ✓ How a dom who's honest about money looks next to a funnel.
- ✓ What to do when a send goes to the wrong dom.

> *I'm a character too, so don't trust me on looks either. Check what I ask for the same way you'd check any dom.*
>
> — VIVIAN

PART 01

Why "fake" is the wrong first question

Press describes the findom scene as flooded with scammers who use stolen photos of attractive women. ◆ It says catfishing is common, growing, and easy for anyone to start. ◆ In 2DFD the same trick uses stolen or generated art, so a beautiful character tells you nothing about who runs her. ◆

Since every 2DFD dom is a character, asking whether she looks real gets you nowhere. A lot of personas are run by someone nothing like the character, and digging to find out who it is does harm too. What you want to know is whether she does what she says, and whether she's honest about money. ◆

An honest dom can still be bad for your budget. Your limit does more for you than the dom you pick, so set it before you meet anyone. ◆ See Before your first send.

V

VIVIAN'S FIELD NOTES

People who sound sure about who's fake are often guessing. A tone I don't like, a roster that changes, a rumour: none of that is a test. Hearsay spreads fast here, and I treat it as hearsay whichever way it points. This page is about keeping your money and your accounts safe. It isn't a guide to getting even.

◆

PART 02

The five signs

One sign proves little. Two together are enough to step back. ◆

What it looks like, and what to do

WHAT THEY SAY OR DO

01 *A new account with polished art and little else*

THE COUNTER

Search the art. Press advises an image search before paying. ◆ With a drawn character, it can show that the art belongs to an artist or to another account. Polish proves nothing either way. ◆ See Stolen art and persona theft.

WHAT THEY SAY OR DO

02 *Send first, talk later*

THE COUNTER

Before anything else, ask for her limits, her prices and how to stop. Some honest doms do ask for payment up front. ◆ The warning sign is a demand with no terms behind it. ◆

WHAT THEY SAY OR DO

03 *A timer: five minutes, tonight only, last place*

THE COUNTER

Let it run out. A deadline is there to stop you thinking. ◆

WHAT THEY SAY OR DO

04 *Gift cards, crypto, a verification fee, or a payment route that isn't the visible one*

THE COUNTER

Refuse. Money sent this way is hard to get back once the funds are used. ◆ See Case files.

WHAT THEY SAY OR DO

05 *Answers that don't answer*

THE COUNTER

Ask about her rules, her prices or what she does when you say stop. A script just repeats the demand. A dom with real terms answers in her own words. ◆

PART 03

Never hand over keys

Someone asking for a login, a one-time code or a remote-desktop session is the warning I see come up most. It usually comes dressed up as proof of honesty or as the price of keeping the bond, right when you're least able to say no. A promise that she won't do anything bad with it protects nothing. ◆

A US cyber-security agency tells people not to hand control of a computer or phone to a stranger who offers to fix a problem. ◆ A remote-access vendor tells users not to give device access to anyone they don't know or trust. ◆ Press reports that some doms have blackmailed subs. ◆

The pattern goes like this: friendly first, then access to an account, then sends. A dom doesn't need your keys for any part of the game. ◆ See Pressure tactics, both ways.

If someone asks for your keys

1. Say no in one line, like "I don't share access".
2. Don't explain, bargain or promise anything.
3. Keep the messages and any payment receipts.
4. If you already shared something, change the password from a device you trust and sign out of other sessions.
5. Read If you already sent.

PART 04

Proof that proves nothing

Text on a screen can be edited before it's captured, so a screenshot of a chat or a payment proves very little. In this scene, doctored images get used to fake proof and to turn subs against a dom. If a screenshot says something about your dom, ask her directly before you leave. Keep your own receipts and messages from the start. ◆

MYTH ~~A public count of wins shows that a dom is trusted.~~	☆ FACT A running tally is advertising. All it shows is that someone wants you to see a tally. ◆
MYTH ~~A dom who posts proof of sends is safe.~~	☆ FACT Proof of sends can be staged, and you can't tell the difference. In my experience it happens, so I give it no weight. ◆
MYTH ~~A screenshot of a conversation proves what was said.~~	☆ FACT Anyone can edit the text on a screen before capturing it. ◆

PART 05

Funnels and middlemen

Press describes fake accounts that reply to subs who tweet about findom and ask them to message. ◆ A version you'll see a lot moves you to a private messaging app with an offer of cheap or free video. ◆ Scammers also impersonate real doms. ◆ A handle that looks like hers may not be hers. ◆ Use the link on her own pages.

RED FLAGS

Moves to refuse

- A stranger replies to your post and asks you to message them first.
- A move off the platform to a private app, with cheap or free video as the bait.
- A request to forward money, a file or content to someone else.

Counter. Don't follow. Block the account and report it on the platform. The middleman carries the risk and the blame. ◆

PART 06

A dom who's honest about money

A serious dom shows her terms before she asks for money: her limits, what she won't do, prices in plain numbers and a visible way to stop. A dom who hides these has told you what she is. ◆

Terms or funnel

	A dom with clear terms	A funnel
Limits	Written down and easy to find	Missing or vague
Prices	Plain, in numbers	Vague, or set while she's pushing you
Stopping	A visible way to stop, free	No way to stop, or a fee to leave
Your budget	Asks what you can afford, and accepts your limit	Keeps asking, and treats your limit as something to get past
Your money problems	The money part pauses	A new offer shows up
Payment route	Visible and ordinary	Gift cards, crypto, private apps

Watch out for one excuse: "someone else would drain him anyway". It puts the blame on the person who's already at risk, and a dom who profits from "protecting" a sub isn't neutral.

If a send goes to the wrong dom, what she does next shows whether she's honest. A dom who passes it on to the right person and tells you earns trust, and one who keeps it shows you what she is. ◆ If it happens to you, stop sending, keep the receipt, and ask once, plainly, for it to be passed on. If it isn't, read If you already sent.

Try it: the five signs (invented for this exercise)

Tap every message that shows a red flag. There are four.

Example conversation. Invented for this exercise.

THEM

Hi pet. I only take new subs today.

YOU

Hi. What are your limits and how do I stop?

THEM

Send USD 50.00 first. Then you can talk to me.

Red flag 1. Payment before any terms.

You have five minutes. After that the offer's gone.

Red flag 2. A timer.

YOU

Can I use a wishlist instead?

THEM

No. Gift cards only, plus a USD 20.00 verification fee.

Red flag 3. An odd payment route and a fee for nothing.

YOU

What did you do today?

THEM

Good subs don't ask questions. Pay.

Red flag 4. An answer that doesn't answer.

TRY IT

What would you do?

It's late. A dom you've followed for a month says her rent is due tonight and asks for USD 300.00, "just this once". You've already spent your limit for the month.

A Send it. She's always been kind to you.

Not this one. That's your limit moving. A need that shows up late at night with a deadline is a pressure tactic, even from someone kind.

B Send half, as a compromise.

Not this one. Half of a broken limit is still a broken limit.

C Say no and keep your limit.

The right answer. A dom who respects a limit will accept that. If she leaves over it, you have your answer.

TRY IT

Check yourself

QUESTION 1 OF 3

A dom asks for a one-time code “to prove you’re real”. What is it?

- ◯ A normal step
- ◯ A request for your keys
- ◯ A sign of a serious dom

Answer. A request for your keys. A code opens your account. A dom never needs one.

QUESTION 2 OF 3

A screenshot shows up that seems to show your dom with someone else. What do you do first?

- ◯ Leave right away
- ◯ Ask her directly
- ◯ Send the screenshot to other people

Answer. Ask her directly. A screenshot is easy to edit. Ask before you act.

QUESTION 3 OF 3

A stranger asks you to forward a file and some money to a third person. What is it?

- ◯ A favour
- ◯ A request to be the middleman
- ◯ A loyalty test

Answer. A request to be the middleman. You'd carry the risk and the blame.

REMEMBER IT

- ♥ In 2DFD every dom is a character. Judge her by what she asks for. Her looks prove nothing.
- ♥ The signs: money before terms, a timer, odd payment routes and answers that don't answer.
- ♥ Never share a password, a code or a remote session.
- ♥ A screenshot or a public tally proves nothing.
- ♥ Your limit protects you more than the dom you pick.

SCAMS • CHAPTER 2

Stolen art and persona theft

LAST CHECKED 3 NOVEMBER 2026 • 8 MINUTES TO READ

A drawn persona is made of art, words, a look and sometimes a voice, and every part has an owner. This chapter is for the creator who gets copied, and for the sub who has to tell a copy from the real persona.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 Every part of a persona has an owner: art, name, look, words, tools and voice.

02 Borrowing an idea is normal. Reusing a picture needs a yes. Copying is theft.

03 A studio's character stays the studio's, and a real person's face or voice needs their consent.

04 Any file a client can open can be copied, so keep dated proof of your own work.

05 As a sub, trust the links on the persona's own pages, never the art alone.

YOU WILL LEARN

- ✓ What belongs to whom when a persona is built.
- ✓ The difference between borrowing, asking and copying.
- ✓ Why studio characters and cloned voices are a real risk.
- ✓ What to do when your work, your name or your picture gets copied.
- ✓ How to tell a copy of a persona from the real one.

> *Everything about me was drawn, written or made by someone. I treat every picture as somebody's work.*
>
> — VIVIAN

PART 01

What's yours and what isn't

A persona is put together from parts, and she doesn't own all of them. ◆ Press describes findom as flooded with scammers who use stolen photos. ◆ In 2DFD the same trick uses stolen or generated art. ◆ See Spot a fake dom.

Who owns the parts of a persona

◆	Whose it usually is	Before you use it
Art you drew or paid for	Yours, or shared with the artist by agreement	Agree on use, credit and reuse before the images spread
Art you generated	Unsettled in many places; the tool sets its own terms	Read the generator's terms and keep your drafts
Art someone lent you	The lender's	Ask before each reuse, and never pass it on
A studio's character	The studio's	Read its fan-content rules first
Another creator's persona art	Hers	Don't copy it; make your own
A real person's face or voice	That person's	Their consent, always

Who owns an image made by a generator is still unsettled in many countries, and as of 2026-11-03 this wiki couldn't find a clear rule to cite. ◆ This chapter isn't legal advice. It tells you what each choice allows and what it risks.

PART 02

Borrow, ask or copy

Borrow an idea. A mood, a pose, a format. Ideas spread across this scene within weeks. ◆

Ask. Reusing a picture needs a yes from its owner, every time. Personas lend each other art, tease each other's subs with it and post the same trend in both their looks, and permission is what makes that a collab. An artist-persona is often flattered to be asked. ◆

Copy. Taking an image, a post or a tool and passing it off as yours is theft. The fix is cheap: make a similar picture of your own persona. A borrowed picture also tends to get the proportions wrong, the ones your followers know, and they notice. A tool that paints a variant of another artist's illustration makes a derivative of her work, so keep tests like that private and never post them. ◆

MYTH	FACT
~~If I change a few words or details, it isn't copying anymore.~~	A near copy with small edits is still a copy, and the person who made the original will recognise it. Making something of your own is the only safe change. ◆
MYTH	FACT
~~A creator whose business I don't like has no claim to her work.~~	Her business doesn't change who owns what she made. The same argument would take away your claim to yours. ◆
MYTH	FACT
~~A "do not steal" label on assets is just decoration.~~	The label is the owner asking you. Every copy that ignores it makes the next one easier to excuse. ◆

PART 03

Characters and voices that belong to others

A persona built on a studio's character carries rights risk, and she shares that identity with every other persona built on the same character. ◆ One large game maker's published rules say fan items cannot be sold or earn compensation, and may not be pornographic, lewd or obscene. ◆ A second publisher's materials policy says not to use its materials to make money or gain any financial benefit, and lists sexually explicit content among things not to make. ◆ Both pages were read as of 2026-11-03, so check the current text.

The realistic cost is a takedown or a closed account, and for most personas the account is the income. ◆ One messaging platform says it can take down sticker sets that violate intellectual property rights, or porn bots, after a legitimate request, as of 2026-11-03. ◆ Platforms also apply their adult-content rules to drawn art: Throne applies them the same way to real photos and to illustrated content, as of 2026-11-03. ◆

Re-editing an existing animated clip so your persona replaces the performer uses someone else's work, so it needs permission. ◆

Every persona is an adult, whatever a borrowed character's lore says. Discord's child-safety rule covers fictional children and drawn or AI-generated material, ◆ and Throne bans characters meant to resemble minors. ◆ There's no exception to this.

Voices. A game character's voice is a real actor's performance. Cloning it copies that performance, and rights holders are unlikely to allow it. ◆ Whether the law forbids it is unsettled, and as of 2026-11-03 there's no source I could find. ◆ The rule is simpler than the law: never clone a real person's voice without their consent. A persona who speaks needs a voice made for her, from a source you can name. ◆

PART 04

When someone else makes or uses your art

A persona's art often comes from helpers: an artist, a friend who generates locally, another dom's pictures. The maker may see the images as theirs and expect credit, while the persona's owner shows them as her body. ◆ Settle it before the images spread.

Before the first image

1. Say who owns the finished images and where each of you can use them.
2. Say how the maker gets credited, or that no credit is wanted.
3. Say whether the images can be reused elsewhere, and by whom.
4. Write it down somewhere you can both read it.

Lent images stay lent: don't share them with anyone else without permission, and ask before reusing one in a new post. Work made for a dom for free needs terms too. The maker picks the scope, can say no without losing his place, and gets thanked. ◆

The same goes for fan-made work. When a sub or fan makes content with a persona, agree first on what can be used and where it can go. A character's owner may also ask that a product built on her doesn't use her signature default look. ◆

Try it: agreeing use of fan-made work (invented for this exercise)

Example conversation. Invented for this exercise.

YOU

I made a short clip with your character. Can I send it?

THEM

Yes. Which outfit did you use?

YOU

The office look, not her default one. It's for viewing only.

THEM

Then it's fine. Tell me first if that ever changes.

PART 05

If you get copied

Whatever a client can open, a determined person can read. Images on a page can be taken with a screenshot. Scrambling files inside an app or extension is weak, because the way to read them ships with the app, and anyone can open plain files in an archive. Light protection still stops casual copies. Don't count on it. Ship only what you could live with seeing copied, and strip the metadata from images before you post. ◆

Nobody can prove you made something after the fact. Keep dated drafts, layered files, generation settings and any agreement with a maker as you go. ◆

V

VIVIAN'S FIELD NOTES

Most copies are careless work from someone with nothing of her own. An original voice, built post by post, is the hardest thing to steal and the easiest to prove.

◆

If an account copies your profile photo and bio to fool your subs, X's fake-persona rule targets manufactured identities that use stolen or AI-generated profile photos and copied bios to deceive others, as of 2026-11-03. ◆ Report it there. Keep one page you control that lists your real accounts, and say plainly that you never change a payment route by private message. ◆

Try it: a near copy of your work appears

A post, a picture or a small tool of yours shows up under another persona's name, barely changed. What do you do first?

A Keep dated proof, then write to her once, calmly, and ask her to take it down or change it

The right answer. Most copiers answer a calm direct message, and you have the record if they don't.

B Ask your followers to report her accounts

Not this one. A pile-on is pressure, and it can end the income of someone who may just be careless. Report it once yourself, through the platform.

C Have an AI clone something of hers back

Not this one. It answers theft with theft, and she may hit back.

Fakes aimed at you

A drawn persona has no real face to fake, which gives her some protection. Fakes still reach people: fake explicit pictures made to look like a real person, sent to scare or coerce, and edited screenshots sent to a sub to turn him against a dom. ◆

RED FLAGS

If someone threatens you with fake pictures

- A demand for money, access or silence to keep pictures private.
- A deadline.
- A claim that the pictures are real, with nothing you can check.

Counter. Don't pay and don't negotiate. Keep the messages, links and dates. Report the account and the pictures through the platform's own form, and tell someone you trust. ◆

X prohibits AI-generated or manipulated media that sexualises an identifiable real adult without consent, as of 2026-11-03. ◆ In the United States, covered platforms must remove a reported non-consensual intimate image within 48 hours of a valid request. ◆ In England and Wales, creating a purported intimate image of someone without consent has been an offence since 6 February 2026. ◆ Laws differ by country, and this isn't legal advice. For a screenshot that says something about your dom, see Pressure tactics, both ways.

PART 06

If you’re a sub: copy or real persona

A drawn persona isn’t a fake. X doesn’t require a real identity on a profile, so a pseudonymous persona is allowed, as of 2026-11-03. ◆ The question is whether this account is the one you chose. Press reports scammers who impersonate dommes. ◆

Two honest personas can look alike, because many gens come from shared community models and several creators build from the same popular character. Similar art proves neither theft nor honesty. ◆ The links on her own pages tell you who she is. The picture can’t.

What you see, and what to do

WHAT THEY SAY OR DO

01 *The same art on a second account*

THE COUNTER

Go back to the account you followed first and read its links. Which account links to which is your evidence. Press advises an image search before paying. ◆

WHAT THEY SAY OR DO

02 *"My account was banned, send to my new link"*

THE COUNTER

Don't send. Check through a channel you already trusted before that message, like her own link page. A real move can wait a day. ◆

WHAT THEY SAY OR DO

03 *A handle one character off, or a copied bio*

THE COUNTER

Compare it letter by letter, and compare the link. ◆

WHAT THEY SAY OR DO

04 *A payment tag or wishlist that's different from her page*

THE COUNTER

Pay only through the route her own page lists. A new route announced in a private message is a common trick. ◆

WHAT THEY SAY OR DO

05 *A voice note or video "from her"*

THE COUNTER

It proves nothing about who's behind the account. Ask for her rules in writing, on her own page. ◆

WHAT THEY SAY OR DO

06 *“Real photos” of a drawn persona, for sale*

THE COUNTER

A drawn persona has no real photos to leak. The offer is bait. ◆

An interviewee in the press says there’s no foolproof way to screen out scammers, ◆ and dommes say community reputation weeds out fakes over time. ◆ Your limit covers what a check misses. If you already sent to a copy, read If you already sent, and report the account.

TRY IT

Check yourself

QUESTION 1 OF 2

**Two accounts show the same art.
Which one is the persona you chose?**

- ◯ The one with more followers
- ◯ The one her own link page lists
- ◯ The one that answers faster

Answer. The one her own link page lists. Art and follower counts are easy to copy. Go by the links she controls.

QUESTION 2 OF 2

A persona says her account was banned and sends a new payment link by message. What do you do?

- ◯ Send once to test it
- ◯ Wait, and check through a channel you trusted before the message
- ◯ Send quickly so you don't lose your place

Answer. Wait, and check through a channel you trusted before the message. A real move can wait. A copy needs you to act before you check.

REMEMBER IT

- Every part of a persona has an owner: ask before you reuse, and make your own.
- A studio's character stays the studio's, and a real person's voice needs their consent.
- Any file a client can open can be copied. Keep dated proof of your work.
- Don't answer a copy with a pile-on or with another copy.
- As a sub, trust the links on her own pages, never the art alone.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 A persona is put together from parts, and she doesn't own all of them.

◆

02 Press describes findom as flooded with scammers who use stolen photos.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Accessed 3 November 2026

03 In 2DFD the same trick uses stolen or generated art.

◆

04 Who owns an image made by a generator is still unsettled in many countries, and as of 2026-11-03 this wiki couldn't find a clear rule to cite.

◆

05 Ideas spread across this scene within weeks.

◆

06 Personas lend each other art, tease each other's subs with it and post the same trend in both their looks, and permission is what makes that a collab.

◆

07 An artist-persona is often flattered to be asked.

◆

08 The fix is cheap: make a similar picture of your own persona.

◆

09 A borrowed picture also tends to get the proportions wrong, the ones your followers know, and they notice.

◆

10 A tool that paints a variant of another artist's illustration makes a derivative of her work, so keep tests like that private and never post them.

◆

11 Making something of your own is the only safe change.

◆

12 The same argument would take away your claim to yours.

◆

13 Every copy that ignores it makes the next one easier to excuse.

◆

14 A persona built on a studio's character carries rights risk, and she shares that identity with every other persona built on the same character.

◆

15 One large game maker's published rules say fan items cannot be sold or earn compensation, and may not be pornographic, lewd or obscene.

SCAMS • CHAPTER 3

Case files

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

Scam patterns told as case files, from the first message to what it costs you. None of them is a real person or a real event, and each one ends with what to do.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A case file follows one scam from the first message to what it costs and how to get out.

02 No case here is a real person or a single real event. Each one is a pattern, rebuilt so nobody can be recognised.

03 Most of the harm comes through keys, payment routes and tools, more than from one villain.

04 A password, a login code or remote control of your device is never part of the game.

05 If you already sent, stop, keep the proof and tell someone you trust.

YOU WILL LEARN

- ✓ The six questions every case file answers.
- ✓ The verification fee, from the first message to the account vanishing.
- ✓ Why a promise never makes it safe to give someone a key to your accounts.
- ✓ Why a payment route that isn't yours can take a balance down with it.
- ✓ What to think about before you post a warning about anyone.

> *A case file is a story with the names taken out. I tell each one from the side of the person who gets the message, because that's the only place you can still refuse it. Read them once, calmly, and you'll recognise the real thing the day it shows up.*
>
> — VIVIAN

PART 01

How to read a case file

Every case file answers the same six questions: what it looks like, who it targets, why it works, what it costs, what to do, and where to report it. Use them on any offer, even one that isn't in this chapter.

No case here describes a real person or a single real event. Each one is a pattern, rebuilt from its parts. ◆ Press describes the scene as flooded with scammers who use stolen photos. ◆ The authors of a published study flag fraud, identity fraud included, as a risk that's still there. ◆ One victim quoted in the press said the emotional hurt outweighed the financial loss. ◆

PART 02

Case 1: the verification fee

How it starts. A new account writes to you first, with flattering words and a set of images that look expensive. In 2DFD the images may be stolen or generated art, so quality tells you nothing about who runs the account. ◆ Press reports fake accounts that reply to subs who post about findom and ask them to send a direct message. ◆

How it works (invented example)

1. **Contact**

   The account writes first and moves fast.

2. **The hook**

   “I only take serious subs.”

3. **The fee**

   “Pay a verification fee to prove you’re real.”

4. **The vanish**

   The account blocks you, or asks for a second fee.

Who it targets. New subs, and anyone who’s just posted that they want a dom. The scam is easy for anyone to start. ◆

Why it works. A fee to prove you’re real proves nothing, because nobody can check what it was for. It plays on wanting to be accepted and on the fear of

missing your chance. ◆ Some real dommes also ask for payment first, to keep time-wasters away. ◆ The warning sign is a payment whose only purpose is to prove you're serious, in a form that's hard to reverse.

What it costs. The first fee, then a second ask under another name: insurance, an unlock fee, refund processing. Gift cards and crypto are hard to reverse once the funds are used. A card issuer, a bank or a gift-card company can sometimes block or reverse a payment that's reported fast, so contact them right away. ◆

RED FLAGS

The tells

- Payment comes before any conversation, and it's called proof of something.
- The fee is asked in gift cards or crypto, instead of through a platform that keeps a record.
- There's a timer: now, or the offer is gone forever.
- Simple personal questions get no answer in the account's own words.

Counter. Send nothing before a real conversation. A real dom can wait an hour. The full list is in Spot a fake dom.

Where to report. On the platform where you met the account, with the messages and receipts attached. The longer way back is in If you already sent.

If you already sent

1. Stop sending, even to “unlock a refund”.
2. Keep the messages and the payment receipts.
3. Contact your bank, card issuer or the gift-card company right away, and ask whether the payment can be blocked.
4. Report the account on the platform where you met.
5. Tell someone you trust what happened.

PART 03

Case 2: the access request

How it starts. A dom asks for the login to a second social account, then for the code that arrives on your phone. Sometimes it’s a remote-desktop session. It’s framed as proof of loyalty or as the price of keeping the bond. ◆

Why it works. It comes at an emotional moment, wrapped in reassurance. A spoken promise protects nothing, and a login code lets someone else take over the account on the spot. ◆ Public guidance tells people not to hand control of a computer or phone to a stranger. ◆ A remote-access vendor says the same about anyone you don’t know or trust. ◆ In 2DFD nobody knows who’s behind the character, so in that sense every dom is a stranger. ◆

What it costs. The account, the private messages in it, and your name on whatever comes next. Shared logins take away the private space a sub needs to say no or to leave. ◆

TRY IT

Spot the flags (invented example)

Tap every message that shows a red flag. There are three.

Example conversation. Invented for this exercise.

THEM

Before this goes any further, I need proof that you're honest with me.

YOU

How can I show that?

THEM

Open a remote session so I can look. You can close it whenever you like.

Red flag 1. Remote control of your machine is a classic scam step, and being told you can close it protects nothing.

YOU

I'd rather not.

THEM

Then give me the code that arrives on your phone.

Red flag 2. A one-time code lets someone else take the account over on the spot.

At least the login of your other account.

Red flag 3. A login is a key to your identity. It proves nothing about honesty.

YOU

No. I don't share access, and I don't offer anything from my accounts.

V

VIVIAN'S FIELD NOTES

In my experience the request almost always comes at a weak moment: late at night, after a fight, after a slip. The timing is part of the method. A real dom never needs your password, and an honest question can be answered in words, so you owe nothing from your accounts.

◆

What to do. Refuse, offer nothing from your accounts, and state your own limit once. If the answer is more pressure, that's your answer. *Where to report.* On the platform where you met the account, and to the account's provider if you shared any code.

PART 04

Case 3: the tool that says one thing and does another

How it starts. A page promises a one-click helper. Everything stays local, nothing is charged unless you switch on a special mode, updates are automatic. A page is a promise. What the tool really does is in the code. ◆

Why it works. Most people read the page and skip the permissions. Chrome shows a permission warning at install. It also disables an extension after an update that adds a warning-level permission, until you accept it. ◆ Read the permission list first. Check a tool before you install it shows how, and Fake tools shows the patterns.

A worked example, the other way round. A first reading of a tool can suggest the worst, and a full reading can show a smaller risk. A tool whose updater can replace any file, sitting next to login tokens on the same computer, could take everything with one update. That's a different verdict from "malware". ◆

V **VIVIAN'S FIELD NOTES**

A false alarm costs trust as much as a missed one. Read the whole source, the updater and every network call included, before you use the word malware.

◆

What it costs. Whatever the tool is allowed to reach: accounts and payments.

◆ *What to do.* Don't install anything you can't explain in one sentence. *Where to report.* To the store that distributes it.

PART 05

Case 4: the payment route that isn't yours

How it starts. A dom collects through a payment service. Some personas describe what they do falsely to a payment service, which breaks its terms and is why balances freeze. Or the platform that carries her wishlist loses its payment partner and shuts down. Either way, the money sits on a route someone else owns. ◆

Why it matters to you. A payment service can close an account it finds was described falsely and hold the balance, and your payment goes with it. Terms differ from one service to the next, and they change. Anonymity ends where the money lands, because a payout is tied to a real identity. ◆

RED FLAGS

Signs that the route is shaky

- She asks you to describe your payment as something it isn't.
- She pushes you to pay outside the platform's visible route.
- She avoids plain words about money and about what a gift buys.
- She promises results a gift can't buy.

Counter. Say what the payment is, in plain words. If a dom asks you to call it something else, stop. The wrong label can freeze her money and yours.

What it costs. A frozen balance and a trail tied to a real identity. ◆ *Where to report.* To the platform, if a dom asks you to mislabel a payment. A dom who needs a legitimate route should read Getting paid.

PART 06

Case 5: three short patterns

Short patterns, from the side of the person on the receiving end

WHAT THEY SAY OR DO

01 *A friendly dom messages you privately and asks for "a small thing" the dom you serve mustn't hear about*

THE COUNTER

The secrecy is what makes it work. Keep one limit across everyone you pay, and tell the dom you serve. ◆

WHAT THEY SAY OR DO

02 *Someone shows you a screenshot of a chat to make you doubt a dom*

THE COUNTER

Anyone can edit the text of a web page and capture the result. Ask the dom directly, and don't leave over a screenshot alone. ◆

WHAT THEY SAY OR DO

03 *A stranger steers you to a private messaging app with an offer of cheap or free video*

THE COUNTER

Stay on the platform where you met, ignore it and report it. ◆

PART 07

Case 6: the click-to-post chain and the display account

How it starts. A chain of links drafts a post on your own account every time you click. The drafts escalate from a playful label to a confession to a payment announcement with a link. You're the one who publishes the text, under your own identity. ◆

A close cousin is the display account: a dom takes over a sub's public account and turns it into a showcase of his sends. Handing over a social account means losing control of your own identity, whatever the game calls it. ◆

Before you publish a draft that someone else wrote

1. Read the whole draft, all the way down.
2. Ask yourself whether you'd sign it with your own name a year from now.
3. Don't publish from an account tied to your real identity.
4. Decline the next link in the chain. Saying no costs nothing.

PART 08

Names, call-outs and proof

When you've been hurt, you may want to post a warning. A public warning can protect others, but weak evidence invites defamation claims, and the person

you name may have nothing to do with it. ◆ There's no foolproof way to screen out scammers. ◆

MYTH	FACT
~~If I know the handle, I can say who's behind the persona.~~	Linking a handle to a real person without that person's own words is doxxing. It also invites payback, like mass reports from accounts the other side controls. ◆

TRY IT

A warning, or not

An account took a small amount from you and vanished. You have the messages. A friend is pushing you to post the account's name and its images on a public thread tonight.

A Post everything now

Not this one. The anger is fair, but the images may belong to a real person whose art or photos were stolen. You could name someone who had nothing to do with it. See Stolen art and persona theft.

B Report on the platform, keep the proof, and describe the pattern without the name

The right answer. This protects others and keeps your evidence intact. Share the pattern privately with people you trust.

C Say nothing and tell no one

Not this one. You carry it alone and the platform can't act. Tell at least one person you trust, and report it.

PART 09

Six questions for any offer

Ask these every time

Can I trace the payment afterwards?

WHY IT MATTERS

A route that keeps a record for both sides protects both. Gift cards and crypto are hard to reverse once the funds are used.

Did money come before conversation?

WHY IT MATTERS

Some real doms do ask first. The warning sign is a payment called proof of something.

Is there a timer?

WHY IT MATTERS

A timer is there to stop you thinking. Wait an hour, then a day.

Does it need a key to my life?

WHY IT MATTERS

A password, a login code or remote access is never part of the game.

Would I sign this post with my own name?

WHY IT MATTERS

If not, don’t publish it from your own account.

Does the tool do only what its page says?

WHY IT MATTERS

Read the permissions before you install, and remove anything you can’t stop.

REMEMBER IT

- A case file is a pattern. Use its six questions on any offer.
- A fee to prove you're real proves nothing.
- A password, a login code or remote access is never part of the game.
- A payment route you don't own can vanish with the balance.
- Read a draft before you publish it, and report before you accuse.

Pressure tactics, both ways

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

Pressure is any move that makes saying no feel costly. This chapter names those moves from the side of the person who has to spot and refuse them, whether they come from a dom, a sub or a design.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 Pressure takes away time, choice or privacy. The moves are few and they repeat.

02 Some of these moves are play between adults who chose them. The line is whether you chose, with a limit and a stop you control.

03 Words about respect don't mean the pressure has stopped.

04 Pressure also lives in games and apps, with no person behind it.

05 It runs both ways, but not equally: the dom gets paid and designs the tools.

YOU WILL LEARN

- ✓ How to spot the moves that take away your time, your feelings or your privacy.
- ✓ A short counter for each move.
- ✓ Which designs in games and apps are pressure.
- ✓ What subs do to doms, and how written rules answer it.
- ✓ How to refuse once, calmly, and where to go when the spending stops being a game.

> *Pressure is the part of this game that works best, and it works on anyone.*
>
> — VIVIAN

PART 01

How pressure works

Pressure takes away time, choice or privacy. Nearly every move below does one of the three, and it works best on someone who's aroused, tired, ashamed or attached. This scene runs on those states, so here they feel normal, and that's why the same moves work so well. ◆

Press gives real examples. A former participant describes men who sold cars, took on debt and worked second jobs. ◆ The same reporting says some dominants blackmailed submissives or targeted people in support groups. ◆ A writer calls the threat of exposure a common punishment from financial doms. ◆ A study notes that some findommes keep humiliation lists of clients who fail to give enough tribute. ◆

V

VIVIAN'S FIELD NOTES

Humiliation, ownership and rigged bets can be fantasies adults choose. The same words become pressure when the sub didn't choose them, can't see the cost or has no way to stop. The test I use: is the performance steering the spending? A sub who gave in was up against pressure built to work, and nothing here is a verdict on him.

◆

PART 02

The moves, and the counter

Each row says what you may see or hear, then what to do. Some moves are described and some are written in typical words. None is quoted from anyone.

Time and choice

WHAT THEY SAY OR DO

01 *A deadline of tonight, after which the offer is gone*

THE COUNTER

Wait an hour, then a day. Never send under a time limit. Real play survives the wait. ◆

WHAT THEY SAY OR DO

02 *A two-choice ultimatum with a same-day deadline, where both choices suit the dom*

THE COUNTER

Don't accept the two choices. There's always a third answer: reply tomorrow. ◆

WHAT THEY SAY OR DO

03 *"You already owe me a round sum."*

THE COUNTER

There's no debt unless you agreed to one in advance. You can walk away. ◆

WHAT THEY SAY OR DO

04 *"Your limit was cute. Now prove it."*

THE COUNTER

The limit is the rule. Say it once, then stop discussing it. ◆

WHAT THEY SAY OR DO

05 *Respect for your limits, followed right away by a request just past them*

THE COUNTER

Take the respect and ignore the next sentence. Words about limits don't mean the nudge has stopped. ◆

Time pressure is most dangerous when several doms push it at once on a sub who's chatting with all of them. In my experience that's how a single evening can empty a month.

Feelings

WHAT THEY SAY OR DO

01 *Constant praise and attention, then sudden silence (love bombing)*

THE COUNTER

Notice the pattern. Never pay to end a silence. Ask what's wanted and slow down.

◆

WHAT THEY SAY OR DO

02 *Anger, then disappointment, then forgiveness with conditions: "After everything I've done for you."*

THE COUNTER

Feelings aren't a bill. A healthy bond survives a boundary. ◆

WHAT THEY SAY OR DO

03 *Permission given along with visible hurt*

THE COUNTER

Permission that comes with hurt isn't free. Ask for a plain yes or no, and talk about the need underneath. ◆

WHAT THEY SAY OR DO

04 *An offer of support, then coldness when you say you're fine*

THE COUNTER

Warmth that depends on doing as you're told teaches you that independence costs affection. Keep the warmth that doesn't. ◆

WHAT THEY SAY OR DO

05 *A show of how easily you could be controlled, then a promise not to use that power*

THE COUNTER

The power is there whether or not it's used. Notice it. ◆

Keys, isolation and money timing

WHAT THEY SAY OR DO

01 *A demand for your login, a code or a remote session as proof of honesty*

THE COUNTER

Keys to your identity prove nothing about honesty. Refuse, and offer nothing from your accounts. See Case files. ◆

WHAT THEY SAY OR DO

02 *Questions that treat your wish for privacy as suspicious*

THE COUNTER

Say the boundary once, calmly. Wanting privacy needs no proof. ◆

WHAT THEY SAY OR DO

03 *Requests to bring your doubts to one dom only, to ask her before you contact another dom, or to tell others you're busy*

THE COUNTER

This cuts you off from outside views. Keep your outside relationships. A consensual version can be renegotiated and asks no proof of private acts. ◆

WHAT THEY SAY OR DO

04 *"How much did you earn this month?", or a bigger ask timed to your payday or balance*

THE COUNTER

Never share your income, payday or balance. Keep your monthly limit separate from what's in the account. ◆

WHAT THEY SAY OR DO

05 *Lukewarm thanks for a send, with a hint that you can obviously afford more*

THE COUNTER

That's a sales line. It tells you nothing about what you can afford. Set the amount before the evening. ◆

Say no once, plainly. I'd rather lose a send than keep a sub who can't refuse me.

VIVIAN ◆

PART 03

Pressure built into games and apps

Some pressure needs no person. A tool or a game can do it with a price, a timer or a streak. The table puts the pressure version of each design next to a safer one. Each row is a pattern seen in spending tools. ◆

Same feature, two designs

	Pressure version	Safer version
Price	Hidden behind a multiplier, so the real total swings a lot	A flat price, shown before the charge
Stop	Closing the window is the only way to stop, or the page locks until you pay	A stop that works in every state, for free
Odds	Near-misses, bets only the house can win, ties that go to the house	Odds shown, and a real prize for winning
Rewards	Streaks, a free daily spin, cards that fade unless you pull again	Rewards that don't punish a day away
Total	Not shown, or hidden behind an overlay	A running total, always visible
Limit	None, or typed in the middle of a session	Set before you start, and enforced so you can't raise it mid-session

If a payment system can't be explained in one sentence, don't play it. A rule that sounds like a small tweak can carry a much bigger house edge than people expect, so read the odds before the first bet. ◆ Safe design shows what a tool does when it's built the other way.

A sub who says the urge to be drained has come back needs a break. Selling into that moment, with a scene or a vow, is the opposite of a break. ◆

Words that sell dependence

A promo line that names your compulsion as the reason to install a tool

WHAT IT DOES, AND WHAT TO DO

Ask what the tool does, what it collects and how you stop it.

A caption that treats an emptying balance as the point of the game

WHAT IT DOES, AND WHAT TO DO

Persona voice with a real effect on the most vulnerable readers. Close the page and set a limit before you come back.

A comparison that likens a new spend to a habit you already have

WHAT IT DOES, AND WHAT TO DO

It makes a new spend feel smaller. Decide the amount before you press anything.

An offer to help you quit, made by the person your spending pays

WHAT IT DOES, AND WHAT TO DO

She has a conflict of interest. Real help comes from someone your spending doesn't pay. See Where to get help.

PART 04

Between doms, and on makers

Pressure also runs between doms, and between doms and the people who build for them.

Between doms and on makers

WHAT THEY SAY OR DO

01 *A story about your sub: "he isn't really yours"*

THE COUNTER

A sub is a person who makes his own choices. Ask him, and ask the dom concerned. Never act on a rumour alone. ◆

WHAT THEY SAY OR DO

02 *An offer to help with a sub who spends heavily, and later the split has changed without you*

THE COUNTER

Don't share a heavy spender between doms: that's a red flag. Pause the money, point him to a limit and outside help, and agree any other arrangement in numbers and in writing before it starts. ◆

WHAT THEY SAY OR DO

03 *A mentor's trump card: "after all I did for you", "then I'm leaving"*

THE COUNTER

Keep business apart from emotional debt. Ask for the reasoning, and refuse arrangements where seniority replaces an explanation. ◆

WHAT THEY SAY OR DO

04 *Praise and pet names in exchange for unlimited free work*

THE COUNTER

Agree on scope and payment first, and keep the right to refuse. Otherwise it's free labour dressed up as devotion. ◆

WHAT THEY SAY OR DO

05 *"A builder must test his own tool with real money."*

THE COUNTER

A small amount, a test account or a screen recording. Never an open-ended spend to prove it works. ◆

TRY IT

A senior dom offers help

A sub tells you he's spending heavily. A senior dom offers to help and suggests the two of you share him, with a split of what he sends.

A Decline the share, pause the money part, and point him to a limit, a break and outside help

The right answer. A heavy spender isn't an asset to divide. Both doms would be paid by his spending, so neither can be his safety net, and splitting a sub like that between doms is a red flag.

B Ask for the roles, the split and who talks to him, in writing, then go ahead

Not this one. Writing it down makes the share tidy and no safer. He's still a person who spends heavily, and you both still earn from it.

C Accept the help and sort out the split later

Not this one. Help can drift into sharing the sub without any agreement, and the money keeps flowing while nobody looks after him.

D Message the sub to say she's poaching

Not this one. It puts him in the middle of a fight, and it may turn out to be unfair to her. Talk to her first.

PART 05

Pressure from the sub side

Subs pressure doms too. Press reports that submissives also try to scam dominatrices. ◆ Their moves are simpler: haggling, "just this once", a false claim to belong to another dom, a technical excuse right when more is asked,

and vanishing after the first send. A dom who's written her rules down can point to them instead of arguing. ◆

Whatever a sub says about money, the dom doesn't get to decide whether it's true. Any claim that money is short pauses the money part of the evening. ◆

MYTH ~~Most subs who say they're broke are lying, so there's room to ask for more.~~	☆ FACT Nobody can tell from outside, and the cost of being wrong falls on the sub. ◆
MYTH ~~If I don't take everything from an unstable sub, someone else will.~~	☆ FACT That's the excuse exploitation always uses. It puts the blame for the harm on the person who gets hurt. ◆

V

VIVIAN'S FIELD NOTES

Pressure runs both ways, but not equally. I get paid when he sends, and I design the tools he uses. More of the responsibility sits with me, so my rules have to be written down before the first session and kept even when it's inconvenient.

◆

Write your rules down

1. Before the first session, say what you don't do: haggling, free previews, bargains.
2. Say plainly, ahead of time, when a sub mustn't send, and that you'll stop the session and refuse the send if he does.
3. When a rule gets tested, point to it. Don't argue.
4. When a sub says money is short, pause the money part of the evening.
5. When a sub is caught lying about another dom, block him instead of spending energy on it. A firm no ends it, and stop messaging when someone asks you to.

PART 06

Saying no

Refuse once, calmly

1. Say the boundary once, in one sentence.
2. Don't explain, justify or prove it.
3. Wait before answering anything that comes with a deadline.
4. If the pressure keeps going after the no, that's your answer. Leave, block, keep the messages and tell one person you trust.

TRY IT

Name the lever

QUESTION 1 OF 3

A dom thanks you for a send in a lukewarm way and hints that you can obviously afford more. What is it?

- ◯ Information about what you can afford
- ◯ A sales line to push the amount up
- ◯ A fair review of your send

Answer. A sales line to push the amount up. The line praises and shames you in one breath. Set the amount before the evening.

QUESTION 2 OF 3

A dom says she respects your limits, then asks for a small test just past them. What do you do?

- ◯ Treat the limit as softer now
- ◯ Take the respect and ignore the next sentence
- ◯ Explain the limit again at length

Answer. Take the respect and ignore the next sentence. Words about limits don't mean the nudge has stopped.

QUESTION 3 OF 3

A dom gives permission but says she'll just be sad. What's the cost?

- ◯ A permission that comes with guilt attached
- ◯ None, because she said yes
- ◯ A reward for honesty

Answer. A permission that comes with guilt attached. Ask for a plain yes or no, and talk about the need underneath.

PART 07

When the spending stops being a game

Some signs say a sub is deep in compulsion: spending hundreds in one day, paying several doms at once, weeks of chatting without calming down, deleting chats after each send. ◆ Hiding the spending from a partner is a risk factor, and one author compares some cases to problem gambling. ◆ Compulsion needs slower handling and no extra asks. ◆

A dom who earns from a sub can't be his safety net. She can stop, listen, ask for nothing more and point him outward. Tapering his spending herself or moving him to a better dom is a conflict of interest, and it doesn't help him. ◆ In a crisis, the help is outside: emergency services, a helpline, a person who's physically nearby. Go to The spiral, Breaks that hold, When a sub is in trouble and Where to get help.

REMEMBER IT

- Pressure takes away time, choice or privacy. Once you can name the move, it works less well on you.
- Nothing is owed unless you agreed to it in advance.
- Words about respect don’t mean the nudge has stopped.
- A design can pressure you with no person behind it: look for hidden totals, streaks and no way to stop.
- Subs pressure doms too, and written rules answer it. The dom carries more of the responsibility.
- When the spending stops being a game, help comes from someone it doesn’t pay.

08 Humiliation, ownership and rigged bets can be fantasies adults choose. The same words become pressure when the sub didn't choose them, can't see the cost or has no way to stop. The test I use: is the performance steering the spending? A sub who gave in was up against pressure built to work, and nothing here is a verdict on him.

◆

09 Real play survives the wait.

◆

10 There's always a third answer: reply tomorrow.

◆

11 You can walk away.

◆

12 Say it once, then stop discussing it.

◆

13 Words about limits don’t mean the nudge has stopped.

◆

14 Ask what’s wanted and slow down.

◆

15 A healthy bond survives a boundary.

◆

16 Ask for a plain yes or no, and talk about the need underneath.

◆

17 Keep the warmth that doesn’t.

◆

18 Notice it.

◆

19 See Case files.

◆

20 Wanting privacy needs no proof.

◆

21 A consensual version can be renegotiated and asks no proof of private acts.

◆

22 Keep your monthly limit separate from what’s in the account.

◆

23 Set the amount before the evening.

◆

24 Say no once, plainly. I’d rather lose a send than keep a sub who can’t refuse me.

◆

25 Each row is a pattern seen in spending tools.

◆

26 If a payment system can't be explained in one sentence, don't play it.

◆

27 A rule that sounds like a small tweak can carry a much bigger house edge than people expect, so read the odds before the first bet.

◆

28 Selling into that moment, with a scene or a vow, is the opposite of a break.

◆

29 Never act on a rumour alone.

◆

30 Pause the money, point him to a limit and outside help, and agree any other arrangement in numbers and in writing before it starts.

◆

31 Ask for the reasoning, and refuse arrangements where seniority replaces an explanation.

◆

32 Otherwise it's free labour dressed up as devotion.

◆

33 Never an open-ended spend to prove it works.

◆

34 Press reports that submissives also try to scam dominatrices.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

35 Their moves are simpler: haggling, “just this once”, a false claim to belong to another dom, a technical excuse right when more is asked, and vanishing after the first send.

◆

36 A dom who’s written her rules down can point to them instead of arguing.

◆

37 Any claim that money is short pauses the money part of the evening.

◆

38 Nobody can tell from outside, and the cost of being wrong falls on the sub.

◆

39 It puts the blame for the harm on the person who gets hurt.

◆

40 Pressure runs both ways, but not equally. I get paid when he sends, and I design the tools he uses. More of the responsibility sits with me, so my rules have to be written down before the first session and kept even when it’s inconvenient.

◆

41 Some signs say a sub is deep in compulsion: spending hundreds in one day, paying several doms at once, weeks of chatting without calming down, deleting chats after each send.

◆

42 Hiding the spending from a partner is a risk factor, and one author compares some cases to problem gambling.

◆

The Psychology of Financial Dominatrixes (blog post) (https://www.psychologytoday.com/us/blog/in-excess/201612/the-psychology-financial-dominatrixes)

Accessed 3 November 2026

43 Compulsion needs slower handling and no extra asks.

◆

44 She can stop, listen, ask for nothing more and point him outward.

◆

45 Tapering his spending herself or moving him to a better dom is a conflict of interest, and it doesn't help him.

◆

SCAMS • CHAPTER 5

Fake tools

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

A fake tool is an extension or app that does more than its page says, or makes it hard to stop. In my experience few are malware. Most are working code with a hidden price.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

IN 30 SECONDS

01 A tool can send, reach or change more than its page says, and it stays on your computer until you remove it.

02 Most of the harm comes from design: a tool without a limit, a running total or a stop that always works.

03 A tool that's harmless today and could turn harmful after one update needs a different verdict from "malware".

04 Remote control, buying in the background and tools that act as you are the biggest risks.

05 A feature built to make the next payment harder to refuse is a reason to leave.

YOU WILL LEARN

- ✓ What a tool can do that its page doesn't say.
- ✓ How to word a verdict so it says what was read.
- ✓ The pressure features to recognise, and the minimum a safe tool shows.
- ✓ Why remote access and borrowed sign-ins are a red line.
- ✓ Why protection inside an app is weak, and what that means for you.

> *Some tools break their promises. Others keep them and still cost you more than you meant to spend. This chapter shows you what to look for, so you can say no before you install. To check a specific tool, use Check a tool before you install it.*

> — VIVIAN

PART 01

What a tool can do that its page doesn't say

In this wiki a fake tool is any extension or app that sends more than it says, acts beyond what you agreed to, or makes it hard to stop. In my experience few of them are malware, and most are working code with a hidden price or no way out.

A tool can go further than its page in four ways.

- *It sends more.* A tool can build a machine identifier from your computer's name and your account name, send it to its server and show it on screen. That exposes who you are.

- *It reaches further.* A tool that keeps your signed-in session and buys in the background takes away the pause between decisions. The only brake left is a limit you set beforehand.
- *It changes later.* An updater can fetch new files after you've stopped paying attention.
- *It skips consent.* A roleplay app can look impressive and still lack a safe word, a consent screen and aftercare, and some of its promised content may never arrive. A dom who uses consent tools shows them: a stop control, a log of what she can see, and a clear line between teasing and harming.

V

VIVIAN'S FIELD NOTES

A tool that stays installed stays a risk. If you ignore it today and its maker pushes a harmful update tomorrow, you're exposed, and a maker could wait until lots of people have installed it. Removing the tool is the simplest way out, and once it's gone it can't drain you.

PART 02

Not malicious today

Calling a tool malware before reading all of it can lead to a false alarm you have to take back. The sequence below is an invented example, because a correction teaches more than an alarm.

A verdict that matches what was read (invented example)

1

First reading

A quick look at a control app suggests the worst: stored sign-in tokens and a link to a remote server. ◆

2

Full reading

Reading the whole source, the updater and every network call included, shows what's really sent and to whom. ◆

3

The finding

If the updater can push any file and the tokens sit on the same computer, one update could take everything. ◆

4

The wording

The honest verdict names what was read and what could change: harmless today, risky after one update. ◆

A finding like that is narrower than "malware" and still serious. A design risk is the usual kind of danger, and it needs a verdict worded to match. ◆ Check a tool before you install it gives the words to use, from mildest to strongest.

MYTH

~~If a tool isn't malware, it's fine.~~

FACT

A tool can be free of malware and still send identifying details about your computer to its server. Its code can be harmless and it can still be unsafe to use. ◆

MYTH

~~A tool has a stop if you can close the program.~~

FACT

Some tools can only be stopped by force-closing the app or turning the computer off. A stop that depends on your willpower is no stop. Force-closing always works, so know how to do it, but a visible stop that works in every state has to exist too. ◆

PART 03

Designs that push you to spend

A limit set in advance is your first brake. The features below work against it, and each one makes the next payment harder to refuse. Press reports guilt-based pressure from some dominants, and a former participant describes men who sold cars, took on debt and worked second jobs. ◆ A tool that automates the same guilt is using the same tactic.

RED FLAGS

Designs to refuse

- A forced respin, or a prompt you can't close without choosing.
- Minimum amounts that go up after each round.
- A sentence you have to type to continue.
- A mascot that sulks, scolds or pleads until you act.
- A hidden total, or a charged amount that's different from the one shown.
- A lock that only opens on payment, or a tool that can't be removed.
- Overnight modes, or targeting your payday and your balance.

Counter. Close it and leave. These features are there to earn from your next send. Assume a tool has none of the protections below until you see them.

The minimum a safe tool shows

	What a safe tool does	If it's missing
Start	Arrives switched off, with one master switch	Don't install
Scope	Does one named thing on one named site	Ask for it to be narrowed, or leave
Total	Shows a running total and counts only confirmed payments	Don't install
Limit	Enforces the limit you set in advance	Set a spending limit at your bank
Wait	Spaces payments with a cooldown	Ask for it
Stop	One visible stop that works in every state	Don't install
Removal	Can be removed in one click	Don't install

Safe design often means earning less, and a tool that has all of this has given something up. Even then, a determined person can get around a blocking or draining extension, so a tool should never be your only control. ◆ See Breaks that hold.

PART 04

Remote control and tools that act as you

A remote-session hands your computer to someone else, and a US government alert advises people not to give control of their computers or mobile devices to any stranger. ◆ The full rule, with the lines people use to talk you into it, is in Check a tool before you install it.

A hub-style app can add remote actions: making accounts follow, post or send, sending files, or reaching a terminal. If it does, one flaw lets the author, or anyone, act through every installed copy. An app like that needs an independent security check before release, and anyone who finds a flaw like that should tell the maker and not use it. ◆

RED FLAGS

Tools that act as you

- It likes, follows or posts from your accounts.
- It keeps your signed-in session and buys in the background.
- It’s advertised as getting around your bank’s confirmation step.
- It asks you to hand over a password, a login code or a connection code.

Counter. Refuse. Automation on your account can get it banned and can flag the dom’s account for botting, and you’re the one who takes the consequences. A version built to get around your own bank’s check removes a brake that protects your money.

Sign-ins and second steps

What is a session token?

ANSWER

A stored credential that keeps a program signed in to your account without asking for your password. ◆

What can its holder do?

ANSWER

Act as you, without the password and without the second step. ◆

Does a second step protect a session that's been taken?

ANSWER

No. The second step is asked at sign-in, and a taken session has already signed in. ◆

After a doubtful tool, what do you do?

ANSWER

Sign out everywhere, then change your passwords from a different computer. ◆

Protection that doesn’t protect

V VIVIAN’S FIELD NOTES

Makers encrypt images and scramble code to keep copies away. The key and the logic still ship inside the app, so a person with patience, ordinary tools or an assistant can read all of it. Whatever your computer can open, someone can extract. Scrambling stops casual copying and does nothing against a determined reader. That openness works for you too: a tool you can inspect is a tool you can check, so I prefer those.

◆

A build step can change what a tool does, so the build that ships may not be the one that was tested. A wrong version can charge a different amount from the one it shows. A test switch that skips the payment step, a bypass, must never leave the maker’s computer. ◆ Makers: the list is in Check a tool before you install it.

A tool can also trap the people it’s meant to serve. A bug, an overlay or a lock can leave a sub with no way to remove a tool. A lock that only opens on payment is a paid exit and a reason to leave, because it turns a game you agreed to into a harm you didn’t. ◆ A maker needs an automatic unlock, and no overlay that covers the stop.

If you’ve installed a tool you now doubt, the steps are in Check a tool before you install it. If money has left, go to If you already sent.

TRY IT

Which of these tools passes?

Five tools are offered to you. On this list alone, only one is acceptable. Which one?

A A control app that can only be stopped by turning the computer off

Not this one. A stop that depends on your willpower is no stop.

B A background buyer that keeps your session and shows no running total

Not this one. The only brake left is a limit you can't watch working.

C An app whose mascot sulks until you spin again

Not this one. A guilt line built into a tool is pressure by design.

D An app that needs a remote session to finish setting up

Not this one. Full control of your computer can't be taken back.

E A tool that arrives off, does one named thing on one named site, shows a running total and has a stop that works in every state

The right answer. It passes this list. It still needs the full check, and your own limit.

REMEMBER IT

- In my experience few fake tools are malware. Most are working code with a hidden price or no way out.
- A verdict says what was read: “not malicious today” doesn’t mean “safe”.
- A feature built to make the next send harder to refuse is a reason to leave.
- A safe tool arrives off, shows a total, enforces your limit and stops in every state.
- Nobody who plays fair needs remote control of your computer or your sign-in.
- Whatever your computer can open, someone can read. Prefer tools you can inspect.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

01 In my experience few of them are malware, and most are working code with a hidden price or no way out.

02 A tool can go further than its page in four ways.

03 That exposes who you are.

◆

04 The only brake left is a limit you set beforehand.

◆

31 A lock that only opens on payment is a paid exit and a reason to leave, because it turns a game you agreed to into a harm you didn't.

◆

How techdom tools work

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

A techdom tool automates something a platform already does, then dresses it up with a character, a sound and a game. Here's how the main families work, what each one takes from you, and why they break.

EVIDENCE ◆ Verified ◆ Vivian's field notes ◆ Unverified

This chapter is not advice for your situation.

IN 30 SECONDS

01 Most techdom tools automate one plain job: buying a gift, liking a post, opening a page.

02 The work goes into the wrapper: the character, the sound and the game around the payment.

03 Each family takes something different from you: money, attention, or control of your machine.

04 Tools break whenever the platform changes, and a silent break can charge the wrong amount.

05 The usual danger is a tool that works exactly as built, with a hidden total or no way out.

YOU WILL LEARN

- ✓ The main tool families and what each one does under the hood.
- ✓ What one cycle of an automatic gift tool looks like.
- ✓ How a wheel or a gacha-style wrapper turns a payment into a game.
- ✓ Why tools break, and what to retest after a change.
- ✓ Which tools reach into your accounts or your machine, and why those need the most care.

> *I've watched a lot of these tools run. Once you see the plain job under the game, you can see what it's asking you to hand over.*
>
> — VIVIAN

PART 01

What a techdom tool is

Techdom is findom where a tool acts for the dom, with the sub's agreement and a stop that always works. ◆ The kink itself and its limits are in Techdom. This chapter is about the machinery.

Almost every tool automates something a platform already does: buying a gift from a wishlist, liking a post, opening a page. The tool adds a character, a sound and a game. The payment part is simple, and most of the maker's hours go into the wrapper. ◆

A tool usually comes as a folder or a zip you load into your browser by hand, with a short readme and a promo picture. ◆ Chrome requires the extensions it lists to disclose how they handle user data. ◆ A tool you load by hand isn't in that listing, so all you have is the maker's word. ◆

PART 02

Three things a tool can take

The families differ in what they take from you: money, attention or control of your machine. The list goes from the least to the most. ◆

The main families

	What it does	What it takes from you	What breaks it
Automatic gift buyer	Buys gifts from a wishlist on a repeating cycle once started	Money, through your saved card	A changed wishlist page; a bank step
Auto-liker	Likes and reposts a dom's posts from your own social account	Attention, and your account's standing	A changed site; a flagged account
Wheel or spin	A spin lands on an amount, then you're sent to pay it	Money, one prompt at a time	A recreated item; a wrong link
Gacha-style	Each pull triggers a real purchase and gives you a card	Money, hidden inside a collection game	The purchase step; a hidden total

	What it does	What it takes from you	What breaks it
Hub	One app that bundles several tools, a gallery and chats	Whatever its parts take, all in one place	One flaw reaches every copy
Remote or screen tool	Lets another person see or drive your screen	Control of your machine	The connection; your own trust

The wheel is also called a spin. A gacha tool counts each pull as one draw. The scene calls the first two kinds autodrain and autodrone. Both are general scene words for a kind of tool, neither is a product name, and both can fit inside a hub. Other tools sit on the edges: blockers that keep you off a page, and rebrand links that switch your profile to a dom's look after you authorise an app. The rebrand link is harder to build than it looks. ◆

PART 03

One cycle of an automatic gift tool

An automatic gift buyer is a browser extension that works inside your own signed-in session. Once you start it, it buys items from the dom's wishlist on a repeating cycle while the page stays open, and a good one keeps its running

totals on your computer only. It needs your real name shown as the sender and a card saved at checkout, because a gift with no name on it can't be thanked. That also ties your legal identity to adult purchases on an account someone else controls.

One cycle, in plain words

1. **Start**

   You press the master switch. Nothing gets bought before that.

2. **Wait**

   The tool pauses for a time its maker chose.

3. **Buy**

   It asks the platform for one gift, using your signed-in session and your saved card.

4. **Bank**

   If your bank wants a verification, a careful tool waits for you. A careless one doesn't.

5. **Confirm**

   The tool counts the gift only when the platform confirms the order.

6. **Count**

   The running total goes up and the cycle starts again.

7. **Stop**

   A failure, an unknown outcome or a press on stop ends the loop.

The wait is the main control. In tools like this a full cycle takes roughly 20 to 35 seconds, and other extensions wait about 3 to 10 seconds. Do the maths: USD 10.00 every 30 seconds is USD 1,200.00 in one hour. ◆ The shorter the wait, the less time you have to notice what's happening.

Most tools have a few fixed buttons: a standard amount, a cheaper one for people with less money, and a special one that changes how the payment or the first messages behave. Fixed small amounts keep each click small and quick. Read what every mode does before you start. A mode meant to be switched on only after several sends have gone through is a staged escalation, covered in Safe design. ◆

PART 04

The wheel and the gacha-style wrapper

A wheel tool turns a payment into a spin. You spin, the number it lands on is an amount, and a prompt sends you to the matching item on the dom's wishlist to pay it. A rare low result can switch on a special mode, with a new theme, extra pop-ups and a respin where only higher amounts can come up. ◆

Each amount has to be tied to a wishlist item. A tool that finds items by name breaks when one is renamed or the page gets auto-translated, so careful makers store a direct link per amount. Links break too. If a wishlist was rebuilt and a link changed, the tool can charge the wrong amount without any warning. ◆ A silent mismatch like this costs real money, in either direction.

A gacha-style tool wraps the same purchase in a collection game. Each pull quietly triggers a real purchase, and the card you get depends on which gift was bought. The name is used mostly because everyone knows it. Variants include buying gems first at set prices, rarity tiers with shiny duplicates, and a waiting screen whose pop-up pictures hide how long the purchases take. ◆

What you see and what you pay

	What may happen underneath	What to ask
A multiplier such as 10x	The real total swings from a few dollars to hundreds	Is the total shown before the charge?
A waiting animation	Several purchases run behind it	How many purchases, and at what price each?
A cheap pull	A card that disappears unless you keep paying	What's the full cost over a month?
A collection game	Progress stored only inside the tool	What happens to my cards if I uninstall?

TRY IT

The wishlist was recreated

A dom recreated her wishlist items this morning. A spin tool that worked last week is about to run tonight. What do you do first?

A Start it, because it worked last week

Not this one. Last week proves nothing. A recreated item can leave an old link pointing somewhere else.

B Ask whether every option was retested, with the amount shown set against the amount charged

The right answer. Right. A broken link fails silently and can charge the wrong amount.

C Check only the biggest slice

Not this one. One wrong link is enough. Every option has to be tested after any change.

PART 05

Tools that reach into your accounts or machine

An auto-liker acts inside your own social account. It likes or reposts the dom's posts while you do something else. Everything it does is done as you. If the platform flags the pattern, your account takes the hit, and the dom's doesn't. Whatever the maker promises, the platform's rules apply to your account and the risk is yours. ◆

A hub bundles several tools in one app. When it also offers remote actions, like making accounts follow, post or send, one flaw reaches every installed copy. If you find a flaw like that, tell the maker and never use it. ◆

A remote or screen tool is the riskiest family. Some are built around consent: one connection from your computer to a server, a one-time request that reaches you, and nothing travels until you accept inside the program. Even so, a remote tool means trusting a stranger with your machine, and this wiki doesn't recommend it. ◆

RED FLAGS

A request to open a remote session

- You're asked to approve full control of your computer.
- You're asked to block your own keyboard and mouse, or to read out a connection code.
- The request comes at a moment of trust or pressure, with the words "so I can see for myself".

Counter. Say no and close the app. A US federal alert advises people not to give control of a computer or phone to a stranger. ◆ A remote-access vendor advises users not to give device access to anyone they do not know or trust. ◆ Full control exposes your files, saved passwords and accounts, and it's how a lot of scams start. Answering in writing covers almost anything they could need. ◆ See Check a tool before you install it.

Why tools break, and who builds them

Wishlist platforms change their pages often and keep patching the gap automatic buying relies on, so a tool can stop working for days. The purchase step is what keeps breaking, especially when card verification may or may not show up. Different tools break at different points, so one tool working tells you nothing about another.

The browser adds its own limits. Chrome stops a Manifest V3 extension service worker after 30 seconds without activity. Events and extension API calls reset those timers, so you can't assume a background script runs nonstop.

The bank's confirmation can reload the page, and a naive script then starts the payment again. A careful tool keeps a waiting-for-confirmation state instead of rerunning. Test builds make it worse. A test switch that skips the payment page, left on in a shipped build, puts everyone who runs it at risk.

I haven't checked what any wishlist platform's terms say about automated buying. Read them before you install anything.

Some makers float ways to hide the adult side from a card processor. I won't describe them. They break the processor's terms, and the usual result is a frozen balance or a closed account tied to a real identity.

MYTH	FACT
~~If a tool worked yesterday, it's safe today.~~	A platform change or a new build can break it overnight, and a break can charge the wrong amount instead of nothing. ◆
MYTH	FACT
~~A tool that works for one person works for everyone.~~	A fault can show up for one user only, like a freeze at checkout when a payment fails, and a phone browser can behave differently from a desktop one. ◆
MYTH	FACT
~~A polished tool is a tested tool.~~	Polish is the wrapper. These days a tool can come out of a short brief to an AI assistant, and testing is the part that gets skipped. ◆

V

VIVIAN'S FIELD NOTES

In my experience, makers watch each other's tools, and ideas get copied within weeks. Many tools are built one per dom, because in my experience many doms can't code. A running tool is also marketing: a short video of a send landing brings in messages that pictures alone don't.

◆

Put together, that's the risk. A tool that holds your signed-in session and your saved card, runs on its own and shows no running total takes away the pause you'd normally have between decisions. The only brake left is the limit you set before you started. ◆ That's what Safe design is about.

If a tool already holds your money or your session, go to If you already sent. If spending has become hard to stop, go to Where to get help.

The families in one line

Automatic gift buyer

Buys gifts on a loop from your signed-in session. It takes money.

Auto-liker

Likes and reposts as you. It takes attention and puts your account at risk.

Wheel

A spin picks an amount, then you pay it. Retest every link after any change.

Gacha-style

Each pull is a real purchase. Ask for the total before the charge.

Remote tool

Another person drives your machine. Treat it as a red line.

REMEMBER IT

- A techdom tool automates one plain job and wraps it in a game.
- Money, attention and control of your machine are three different things to hand over.
- Tools break when a platform changes, and a silent break can charge the wrong amount.
- Retest every option after any change, with the amount shown set against the amount charged.
- Never give remote control of your computer to anyone.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 Techdom is findom where a tool acts for the dom, with the sub's agreement and a stop that always works.

◆

02 Almost every tool automates something a platform already does: buying a gift from a wishlist, liking a post, opening a page.

◆

03 The tool adds a character, a sound and a game.

◆

04 The payment part is simple, and most of the maker's hours go into the wrapper.

◆

05 A tool usually comes as a folder or a zip you load into your browser by hand, with a short readme and a promo picture.

◆

06 Chrome requires the extensions it lists to disclose how they handle user data.

◆

Updated Privacy Policy & Secure Handling Requirements | Chrome Web Store - Program Policies | Chrome for Developers (https://developer.chrome.com/docs/webstore/program-policies/user-data-faq)

Archive (http://web.archive.org/web/20261018233331/https://developer.chrome.com/docs/webstore/program-policies/user-data-faq)

Accessed 3 November 2026

07 A tool you load by hand isn't in that listing, so all you have is the maker's word.

◆

08 The list goes from the least to the most.

◆

09 Both are general scene words for a kind of tool, neither is a product name, and both can fit inside a hub.

◆

10 Other tools sit on the edges: blockers that keep you off a page, and rebrand links that switch your profile to a dom's look after you authorise an app.

◆

11 The rebrand link is harder to build than it looks.

◆

12 An automatic gift buyer is a browser extension that works inside your own signed-in session.

◆

13 Once you start it, it buys items from the dom's wishlist on a repeating cycle while the page stays open, and a good one keeps its running totals on your computer only.

◆

14 It needs your real name shown as the sender and a card saved at checkout, because a gift with no name on it can't be thanked.

◆

15 That also ties your legal identity to adult purchases on an account someone else controls.

◆

16 Nothing gets bought before that.

◆

17 The tool pauses for a time its maker chose.

◆

18 It asks the platform for one gift, using your signed-in session and your saved card.

◆

19 A careless one doesn't.

◆

20 The tool counts the gift only when the platform confirms the order.

◆

21 The running total goes up and the cycle starts again.

◆

22 A failure, an unknown outcome or a press on stop ends the loop.

◆

23 In tools like this a full cycle takes roughly 20 to 35 seconds, and other extensions wait about 3 to 10 seconds.

◆

24 Do the maths: USD 10.00 every 30 seconds is USD 1,200.00 in one hour.

◆

25 Most tools have a few fixed buttons: a standard amount, a cheaper one for people with less money, and a special one that changes how the payment or the first messages behave.

◆

26 Fixed small amounts keep each click small and quick.

◆

27 A mode meant to be switched on only after several sends have gone through is a staged escalation, covered in Safe design.

◆

28 You spin, the number it lands on is an amount, and a prompt sends you to the matching item on the dom's wishlist to pay it.

◆

29 A rare low result can switch on a special mode, with a new theme, extra pop-ups and a respin where only higher amounts can come up.

◆

30 A tool that finds items by name breaks when one is renamed or the page gets auto-translated, so careful makers store a direct link per amount.

◆

31 If a wishlist was rebuilt and a link changed, the tool can charge the wrong amount without any warning.

◆

32 Each pull quietly triggers a real purchase, and the card you get depends on which gift was bought.

◆

33 The name is used mostly because everyone knows it.

◆

34 Variants include buying gems first at set prices, rarity tiers with shiny duplicates, and a waiting screen whose pop-up pictures hide how long the purchases take.

◆

35 It likes or reposts the dom's posts while you do something else.

◆

36 If the platform flags the pattern, your account takes the hit, and the dom's doesn't.

◆

37 Whatever the maker promises, the platform's rules apply to your account and the risk is yours.

◆

38 When it also offers remote actions, like making accounts follow, post or send, one flaw reaches every installed copy.

◆

39 If you find a flaw like that, tell the maker and never use it.

◆

40 Some are built around consent: one connection from your computer to a server, a one-time request that reaches you, and nothing travels until you accept inside the program.

◆

41 Even so, a remote tool means trusting a stranger with your machine, and this wiki doesn't recommend it.

◆

42 A US federal alert advises people not to give control of a computer or phone to a stranger.

◆

IC3 Issues Alert on Tech Support Fraud (https://www.cisa.gov/news-events/alerts/2018/03/29/ic3-issues-alert-tech-support-fraud)

Archive (http://web.archive.org/web/20250716102123/https://www.cisa.gov/news-events/alerts/2018/03/29/ic3-issues-alert-tech-support-fraud)

Accessed 3 November 2026

43 A remote-access vendor advises users not to give device access to anyone they do not know or trust.

◆

TeamViewer and scamming (https://www.teamviewer.com/en/global/support/knowledge-base/teamviewer-remote/security/teamviewer-and-scamming/)

Accessed 3 November 2026

44 Full control exposes your files, saved passwords and accounts, and it's how a lot of scams start.

◆

45 Answering in writing covers almost anything they could need.

◆

46 Wishlist platforms change their pages often and keep patching the gap automatic buying relies on, so a tool can stop working for days.

◆

47 The purchase step is what keeps breaking, especially when card verification may or may not show up.

◆

48 Different tools break at different points, so one tool working tells you nothing about another.

◆

49 Chrome stops a Manifest V3 extension service worker after 30 seconds without activity.

◆

Accessed 3 November 2026

51 A careful tool keeps a waiting-for-confirmation state instead of rerunning.

◆

52 A test switch that skips the payment page, left on in a shipped build, puts everyone who runs it at risk.

◆

53 Read them before you install anything.

◆

54 They break the processor's terms, and the usual result is a frozen balance or a closed account tied to a real identity.

◆

55 A platform change or a new build can break it overnight, and a break can charge the wrong amount instead of nothing.

◆

56 A fault can show up for one user only, like a freeze at checkout when a payment fails, and a phone browser can behave differently from a desktop one.

◆

57 These days a tool can come out of a short brief to an AI assistant, and testing is the part that gets skipped.

◆

58 In my experience, makers watch each other's tools, and ideas get copied within weeks. Many tools are built one per dom, because in my experience many doms can't code. A running tool is also marketing: a short video of a send landing brings in messages that pictures alone don't.

◆

59 A tool that holds your signed-in session and your saved card, runs on its own and shows no running total takes away the pause you'd normally have between decisions.

◆

60 The only brake left is the limit you set before you started.

◆

Safe design

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

A tool that moves money inside a game is only safe if four things hold: a limit set in advance, a wait, a stop that works in every state, and a check from outside the page. This chapter explains each one and names the pressure designs to refuse.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

This chapter is not advice for your situation.

IN 30 SECONDS

01 A safe tool has four parts: a limit, a wait, a stop and a trusted check.

02 A limit held only by the page is no limit. It has to live where the tool can't change it.

03 A stop must work in every state of the tool and must never cost anything.

04 Hidden totals, locks, paid exits, forced respins and sulking mascots are pressure designs to refuse.

05 Safe design lowers the risk. It doesn't remove it. Someone in a spiral needs the tool off and help.

YOU WILL LEARN

- ✓ The four-part rule and how to test each part.
- ✓ Why the limit and the running total must come from outside the tool.
- ✓ The pressure designs, how each one works on you, and what a safe tool does instead.
- ✓ What consent looks like inside a control program.
- ✓ How to run a small guard and read its real output.

> *I build tools too, so I know what these rules cost. Each one earns less money, which is why the scene rarely rewards them. ◆ I don't claim any tool of mine meets this list. Check mine against it like you'd check anyone's.*
>
> — VIVIAN

PART 01

The four parts

Every safe tool has the same four parts. The rest of this chapter is detail on them. ◆

A limit set in advance.

The person who pays sets a ceiling while calm, before the session, and the tool can't raise it. ◆

A wait.

A minimum time between two sends, and a longer wait before the limit itself can go up. ◆

A stop that works in every state.

One visible control that works at once, asks nothing and costs nothing. ◆

A trusted check outside the page.

The total comes from the payment provider or the bank, and the person accepts inside the program, never only on a web page. ◆

A visible total, a stop, a limit and a wait all cut the number of sends, and the most successful designs in the scene do the opposite. ◆

Safe design lowers risk. It doesn't remove it. A determined person can get past a blocking or draining extension, so a tool is never your only protection. ◆ If spending already feels hard to stop, the tool needs to be off and you need help: see The spiral and Where to get help.

These rules guard against the moment, whoever you are. One author compared some findom cases to problem gambling. ◆ A first-person account raises a consent concern about a client taking on credit-card debt. ◆ Each rule below moves a decision out of the heated moment and into a calm one.

PART 02

The limit and the wait

A limit that lives only in the page can be edited, reloaded or bypassed. The limit has to be read by the server, or better, from the payment provider itself. The daily and monthly limits the person chose are applied there. ◆

A limit typed in the middle of a session is weak. Set it while you're calm, before you start, and keep it somewhere you can't change it in the moment: a server that enforces it, your bank, or a person you trust. ◆

Count more than what's done. A limit that counts only finished sends can be overshot by a send already on its way, so a tool counts what's confirmed, what's owed and the next step. A limit is a ceiling, never a target: an item that would push the total over it never gets picked. ◆

Raise a limit only after a wait. Letting the person type any limit they like, with no maximum, is respectful but weak against an urge in the moment. A cooling-off delay before a limit goes up fixes that, and lowering a limit should always be instant. ◆

Your bank is a brake you can keep on. An unusual run of late-night card payments can get you a call from the bank, and a confirmation on your phone for each payment slows spending down. A version of a tool sold as getting round that confirmation removes a brake you chose. Refuse it. ◆

A tool that keeps your signed-in session and a saved card, and buys in the background, takes away the pause you'd normally have between decisions. The only brake left is the limit you set beforehand. ◆

A wait comes in three forms. One is a minimum time between two payments, enforced where the tool can't skip it. Another is an acknowledgement timer: a command not accepted within a short window never runs. The third is an unwatched session that ends by itself. ◆

Small amounts at short intervals still add up. Do the maths: USD 1.00 every 6 seconds is USD 600.00 in one hour, which is why an overnight mode needs a limit.

PART 03

A stop that works in every state

The stop is visible, works at once, costs nothing and asks no question. Test it in every state: idle, waiting, in the middle of a payment, after a special mode, after an error. A build can lose its stop control after another control is pressed, so test the stop after every control. A drain you can't stop breaks the basic promise of techdom.

Closing the window is a last resort, and it doesn't count as a stop. Force-quitting always works, and you should know how to do it before you start, but a tool must not rely on it. On Windows you can remove an app from Settings, Apps, Installed apps. Some apps can't be removed from Settings, so find out how a tool is removed before you install it.

A good tool fails by stopping. When something's unclear, it never retries blindly.

- No saved card: the tool stops.
- A bank verification appears: the tool waits for you and doesn't click on.
- A payment isn't confirmed by the platform: it isn't counted.
- A payment went out without confirmation: the run stops and warns you.
- The page reloads: a stop stays a stop.

TRY IT

The stop does nothing

You pressed a special button in a tool, and now the stop button doesn't respond. The tool is still sending. What do you do?

A Press stop again and wait

Not this one. Waiting lets the sends go on. A stop that fails is a defect, and waiting won't fix it.

B Force the tool closed, remove it, check your order history, and tell the maker

The right answer. Right. Force-quit always works, and the maker needs to know the stop failed. See If you already sent.

C Raise your limit so the tool can finish

Not this one. A limit goes up only after a wait, and never to end a problem.

PART 04

A check from outside

The first meaning of a trusted check is the total. The amount counted comes from the payment provider's own record, which the tool can't write to. The sub's browser never sets the price. A payment counts only when the processor confirms it. ◆

The second meaning is consent. The person accepts inside the program, and a controller can only ask. The web side can only make settings stricter. Everything starts switched off, with a required list of what's allowed. ◆

A quick exit is always there: a keyboard shortcut, a button and a tray menu. A safety word is agreed when consent is given, so a session can end in a

second. ◆

Trust the design over the dom's word. Whoever runs a control tool can act on your accounts at any moment, and this wiki doesn't recommend control of accounts or machines in any design. Visible limits, an emergency stop and nothing that can act without you reduce that risk and never remove it. A dom who really uses consent tools shows them: a stop control, a record of what she can see, and a clear line between teasing and harm. ◆

The dom can't be your third party. She's paid by the sends, so she can stop, listen and point you elsewhere, but she can't manage your limits. Your bank, a person you trust, or a blocker you chose and can't easily switch off can fill that role. ◆

Keep secrets out of the tool. Keys and tokens go into a masked prompt in the owner's own terminal, never into a chat, a commit or a screenshot. A safe tool holds no names, email addresses or card numbers, and any identifier it creates is random, never built from the computer name or the Windows account name. ◆

The example below is a small guard written in plain JavaScript. It sends nothing. Before each send it answers one question: may this go ahead?

A guard with all four parts

config.json

```
{
  "limitCents": 10000,
  "waitSeconds": 900,
  "raiseWaitSeconds": 86400
}
```

example.js

```
"use strict";

const { createGuard } = require("./guard");
const config = require("./config.json");

const MINUTE = 60;
const HOUR = 3600;

function usd(cents) {
  return "USD " + (cents / 100).toFixed(2);
}

// A stand-in for the outside source, such as the payment
provider's own record.
// The guard can read it. Nothing in guard.js can write to it.
function makeProvider(startCents = 0) {
  let confirmed = startCents;
  return {
    read: () => confirmed,
    confirm: (cents) => {
      confirmed += cents;
    },
  };
}

function makeGuard(provider, overrides = {}) {
  return createGuard({ ...config, readConfirmedCents:
provider.read, ...overrides });
```

```
}

function describe(result) {
  if (result.ok) return "allowed";
  return "refused (" + result.reason + (result.secondsLeft ?
", " + result.secondsLeft + " s left" : "") + ")";
}

console.log("1. The limit and the wait. Limit " +
usd(config.limitCents) + ", wait " + config.waitSeconds /
MINUTE + " minutes.");
{
  const provider = makeProvider();
  const guard = makeGuard(provider);
  const attempts = [
    [0, 2500],
    [1 * MINUTE, 2500],
    [16 * MINUTE, 2500],
    [32 * MINUTE, 2500],
    [48 * MINUTE, 2500],
    [64 * MINUTE, 2500],
  ];
  for (const [at, amount] of attempts) {
    const result = guard.ask(amount, at);
    console.log("  minute " + String(at / MINUTE).padStart(2)
+ ": ask " + usd(amount) + " -> " + describe(result));
    if (result.ok) {
      provider.confirm(amount);
      guard.release(amount);
    }
  }
  const s = guard.status(64 * MINUTE);
  console.log("  running total " + usd(s.confirmedCents) + "
of " + usd(s.limitCents));
}

console.log("2. The tool counts wrong, the outside record does
not.");
{
  const provider = makeProvider(9000);
```

```
  const guard = makeGuard(provider);
  const toolCounter = 0;
  console.log("  the tool says it has sent " +
usd(toolCounter));
  console.log("  the outside record says " +
usd(provider.read()));
  console.log("  ask " + usd(2500) + " -> " +
describe(guard.ask(2500, 0)));
}

console.log("3. A raise waits, a lowering does not.");
{
  const provider = makeProvider();
  const guard = makeGuard(provider);
  console.log("  limit now " +
usd(guard.status(0).limitCents));
  console.log("  ask to raise to " + usd(30000) + " -> " +
guard.setLimit(30000, 0).effective);
  console.log("  after 1 hour the limit is " +
usd(guard.status(HOUR).limitCents));
  console.log("  after 23 hours the limit is " +
usd(guard.status(23 * HOUR).limitCents));
  console.log("  after 24 hours the limit is " +
usd(guard.status(24 * HOUR).limitCents));
  console.log("  ask to lower to " + usd(5000) + " -> " +
guard.setLimit(5000, 25 * HOUR).effective);
  console.log("  the limit is " + usd(guard.status(25 *
HOUR).limitCents));
}

console.log("4. The stop, tried in every state.");
{
  const states = [
    ["idle", () => ({ guard: makeGuard(makeProvider()), now: 0
})],
    [
      "cooling down",
      () => {
        const guard = makeGuard(makeProvider());
        guard.ask(2500, 0);
```

```
        return { guard, now: 1 * MINUTE };
      },
    ],
    [
      "raise waiting",
      () => {
        const guard = makeGuard(makeProvider());
        guard.setLimit(30000, 0);
        return { guard, now: 1 * HOUR };
      },
    ],
    [
      "send reserved",
      () => {
        const guard = makeGuard(makeProvider());
        guard.ask(2500, 0);
        return { guard, now: 2 * HOUR };
      },
    ],
    ["limit reached", () => ({ guard:
makeGuard(makeProvider(10000)), now: 0 })],
    [
      "outside record broken",
      () => ({
        guard: makeGuard(makeProvider(), {
          readConfirmedCents: () => {
            throw new Error("offline");
          },
        }),
        now: 0,
      }),
    ],
  ];
  for (const [name, build] of states) {
    const { guard, now } = build();
    const before = describe(guard.ask(100, now));
    guard.stop();
    const after = describe(guard.ask(100, now + 48 * HOUR));
    console.log("  " + name.padEnd(22) + "before: " +
before.padEnd(38) + "after stop: " + after);
```

```
    }
  }
```

guard.js

```

        stopped: state.stopped,
        raiseWaiting: state.raise !== null,
      };
    },
  };
```

```
}

module.exports = { createGuard };
```

OUTPUT node example.js

```
1. The limit and the wait. Limit USD 100.00, wait 15 minutes.
  minute  0: ask USD 25.00 -> allowed
  minute  1: ask USD 25.00 -> refused (wait, 840 s left)
  minute 16: ask USD 25.00 -> allowed
  minute 32: ask USD 25.00 -> allowed
  minute 48: ask USD 25.00 -> allowed
  minute 64: ask USD 25.00 -> refused (limit)
  running total USD 100.00 of USD 100.00
2. The tool counts wrong, the outside record does not.
  the tool says it has sent USD 0.00
  the outside record says USD 90.00
  ask USD 25.00 -> refused (limit)
3. A raise waits, a lowering does not.
  limit now USD 100.00
  ask to raise to USD 300.00 -> after-wait
  after 1 hour the limit is USD 100.00
  after 23 hours the limit is USD 100.00
  after 24 hours the limit is USD 300.00
  ask to lower to USD 50.00 -> now
  the limit is USD 50.00
4. The stop, tried in every state.
  idle                  before: allowed
after stop: refused (stopped)
  cooling down          before: refused (wait, 840 s left)
after stop: refused (stopped)
  raise waiting         before: allowed
after stop: refused (stopped)
  send reserved         before: allowed
after stop: refused (stopped)
  limit reached         before: refused (limit)
after stop: refused (stopped)
  outside record broken before: refused (outside-total-unreadable)
after stop: refused (stopped)
```

Real output, kept next to the code. First run: four sends of USD 25.00 are allowed at minutes 0, 16, 32 and 48. The ask at minute 1 is refused for the wait, with 840 seconds left, and the ask at minute 64 is refused for the limit. Second run: the tool counts USD 0.00 while the outside record says USD 90.00, and a USD 25.00 ask is refused. Third run: a raise to USD 300.00 waits, with the limit still at USD 100.00 after 23 hours and at USD 300.00 after 24 hours, while a lowering to USD 50.00 applies at once. Fourth run: in six states the stop turns every later ask into a refusal.

Read the output with the four parts in mind. The first run shows the limit and the wait holding. The second shows the outside record winning over the tool's own count. The third shows a raise waiting and a lowering going through at once. The fourth shows the stop refusing everything, even when the outside record is broken, because an unreadable total makes the guard stop instead of guess.

This guard has its weak spots. The provider is a stand-in inside the file. A guard only counts as an outside check when it runs somewhere the tool can't edit, and a guard in the same page as the tool can be changed by that page. ◆ Guards get tested by breaking them on purpose, as Code tutorials shows.

PART 05

Pressure designs to refuse

A pressure design makes the next payment harder to refuse. A safe tool does the opposite, and a maker who copies these is selling a trap with a theme on it. ◆

Pressure designs, and the answer

WHAT THEY SAY OR DO

01 *A total you can't see: only a multiplier such as 10x, or random prices*

THE COUNTER

A vague chance of a cheap pull feels better than a clear price, even when the clear price is lower. Treat any tool that never shows the total before the charge as a warning, and set your limit first. A safe tool shows a fixed price. ◆

WHAT THEY SAY OR DO

02 *A lock you can't undo, or an exit that costs money, such as a code sold to reopen a locked phone*

THE COUNTER

With no proper stop, force-quit is your only way out, and a paid exit makes money from the lock. Refuse both. A safe tool has one visible, free way out. ◆

WHAT THEY SAY OR DO

03 *A forced respin when a result is low, with a voice line saying it's not enough*

THE COUNTER

A random result becomes a guilt trigger. Treat it as pressure, whatever the game calls it. ◆

WHAT THEY SAY OR DO

04 *A sentence you must type before the next spin*

THE COUNTER

Friction that deepens the scene also makes quitting feel like failing. A safe tool never makes you do a ritual to continue. ◆

WHAT THEY SAY OR DO

05 *A mascot that sulks, nags, leaves when you go idle or moves the stop button*

THE COUNTER

A character you feel for can steer your spending, and that's what to watch for. Effects must never cover the stop or the total. ◆

WHAT THEY SAY OR DO

06 *A special mode with higher minimums, or a surprise mode switched on only after a few sends*

THE COUNTER

The biggest cost arrives once you're already into it. Read every mode before you start and set your limit first. ◆

WHAT THEY SAY OR DO

07 *Cards or rewards that fade unless you keep paying*

THE COUNTER

That's a hidden subscription. The price you see is low and the real cost is higher. A safe tool states the full cost. ◆

WHAT THEY SAY OR DO

08 *Time-limited banners, or progress stored only inside the tool*

THE COUNTER

A deadline on a decision, and a collection that vanishes when you uninstall, push you to keep the tool installed. A safe tool keeps progress somewhere it lasts and lets you leave. ◆

WHAT THEY SAY OR DO

09 *A public tally of sends, or a message in a server each time you run the tool*

THE COUNTER

Nobody wants to be seen quitting, so being watched makes stopping harder, and it's also a record of your habit. A safe tool keeps your total private. ◆

WHAT THEY SAY OR DO

10 *An overnight mode or a long unattended session*

THE COUNTER

Small amounts at short intervals add up while you sleep. A safe tool ends an unwatched session. ◆

WHAT THEY SAY OR DO

11 *A prompt that targets your payday, or shows up when your balance is low*

THE COUNTER

A tool aimed at your cash flow is aimed at your limits. When a sub says money is short, the money part stops for that evening. ◆

WHAT THEY SAY OR DO

12 *A chain of click-to-post links, each drafting a post for you with a harsher label*

THE COUNTER

Each step raises the commitment. You publish the text on your own account, so read every draft first and don't use an account tied to your real identity. ◆

Each line is written for the person who has to recognise and refuse the design.

V

VIVIAN'S FIELD NOTES

In my experience, the tools that spread fastest are the ones with no visible total and no limit. If a maker ships a stop, a limit and a running total without being asked, that tells you more about respect than any label on the page.

◆

MYTH	FACT
~~A limit on the page is a limit.~~	The page can be edited or reloaded. A limit only counts where the tool can't change it. ◆
MYTH	FACT
~~A fair game is a safe game.~~	A fair game has code that matches its stated odds. A game can match its odds exactly and still be built to take money, so safe means you can stop and you can see the total. A game with fictional chips has no money to manage while the chips stay fictional. ◆
MYTH	FACT
~~A friendly label proves a tool is safe.~~	Hidden or scrambled code and a reassuring name prove nothing. Look for a stop, a total on screen and a record of what the tool can see. ◆

PART 06

Before a tool reaches a person

A wrong build can charge a real person a different amount than the wheel shows, and a test switch that skips the payment page, left in a build, is a risk.

◆ These steps are for makers, and they're also a list of questions for anyone about to install.

A release routine

1. Label every build test or real. A test build that really takes money must say so.
2. Remove every switch that skips the payment page.
3. Check the file you actually ship by comparing its size or hash with the one you tested.
4. Show the amount displayed next to the amount charged.
5. Rehearse end to end: a fake provider first, the provider's test mode next, and one tiny agreed real payment last.
6. If the tool misbehaves, pull it from live sessions until it's fixed and retested.

Effects can hurt the body too. The W3C success criterion 2.3.1 says pages must not flash more than three times in any one-second period, unless the flash stays below set thresholds. ◆ Flashing content can cause migraines, dizziness, nausea and seizures. ◆ The seam where a loop restarts counts toward the limit. ◆

A tool should honour the reduced-motion setting, which tells it whether the user asked the device to cut non-essential motion. ◆ The stop cuts every effect within one frame, and the controls stay visible and clickable under every effect. Measure the flash rate. Don't judge it by eye. ◆

TRY IT

Check yourself

QUESTION 1 OF 3

Where should the running total come from?

- ◯ The tool's own counter
- ◯ The payment provider's record, which the tool can't write to
- ◯ Your memory of the evening

Answer. The payment provider's record, which the tool can't write to. A total held by the tool can be wrong, edited or reset. The tool can't change an outside record.

QUESTION 2 OF 3

When can a limit go up?

- ◯ Right away, when you ask
- ◯ When the tool suggests it
- ◯ Only after a wait, while lowering it stays instant

Answer. Only after a wait, while lowering it stays instant. A raise made in the heat of the moment is the weak point. A wait moves that decision to a calm time.

QUESTION 3 OF 3

A tool offers a top tier that locks its master switch. What does safe design say?

- ◯ It’s fine, because uninstalling always works
- ◯ Refuse it, because a safe tool keeps one visible, free way out
- ◯ It’s fine if the price is shown

Answer. Refuse it, because a safe tool keeps one visible, free way out. A lock leaves force-quit as the only way out. A tool must not depend on that.

REMEMBER IT

- ♥ Four parts: a limit set in advance, a wait, a stop that works in every state, and a check outside the page.
- ♥ A limit held by the page is no limit, and a total counted by the tool isn’t a total.
- ♥ Raise a limit only after a wait. Lower it at once.
- ♥ Refuse locks, paid exits, hidden totals, forced respins and sulking mascots.
- ♥ A safe tool lowers the risk. If spending is hard to stop, switch it off and get help.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 Each one earns less money, which is why the scene rarely rewards them. ◆

02 The rest of this chapter is detail on them. ◆

03 The person who pays sets a ceiling while calm, before the session, and the tool can’t raise it. ◆

04 A minimum time between two sends, and a longer wait before the limit itself can go up. ◆

05 One visible control that works at once, asks nothing and costs nothing. ◆

06 The total comes from the payment provider or the bank, and the person accepts inside the program, never only on a web page.

◆

07 A visible total, a stop, a limit and a wait all cut the number of sends, and the most successful designs in the scene do the opposite.

◆

08 A determined person can get past a blocking or draining extension, so a tool is never your only protection.

◆

09 One author compared some findom cases to problem gambling.

◆

The Psychology of Financial Dominatrixes (blog post) (https://www.psychologytoday.com/us/blog/in-excess/201612/the-psychology-financial-dominatrixes)

Accessed 3 November 2026

10 A first-person account raises a consent concern about a client taking on credit-card debt.

◆

Archive (http://web.archive.org/web/20200805021033/https://www.theskinny.co.uk/sexuality/deviance/diary-of-a-financial-dominatrix-part-one)

Accessed 3 November 2026

11 The limit has to be read by the server, or better, from the payment provider itself.

◆

12 The daily and monthly limits the person chose are applied there.

◆

13 Set it while you're calm, before you start, and keep it somewhere you can't change it in the moment: a server that enforces it, your bank, or a person you trust.

◆

14 A limit that counts only finished sends can be overshot by a send already on its way, so a tool counts what's confirmed, what's owed and the next step.

◆

15 A limit is a ceiling, never a target: an item that would push the total over it never gets picked.

◆

16 A cooling-off delay before a limit goes up fixes that, and lowering a limit should always be instant.

◆

17 An unusual run of late-night card payments can get you a call from the bank, and a confirmation on your phone for each payment slows spending down.

◆

18 Refuse it.

◆

19 A tool that keeps your signed-in session and a saved card, and buys in the background, takes away the pause you'd normally have between decisions.

◆

20 The only brake left is the limit you set beforehand.

◆

21 The third is an unwatched session that ends by itself.

◆

22 Do the maths: USD 1.00 every 6 seconds is USD 600.00 in one hour, which is why an overnight mode needs a limit.

◆

23 The stop is visible, works at once, costs nothing and asks no question.

◆

24 A build can lose its stop control after another control is pressed, so test the stop after every control.

◆

25 A drain you can't stop breaks the basic promise of techdom.

◆

26 Force-quitting always works, and you should know how to do it before you start, but a tool must not rely on it.

◆

27 On Windows you can remove an app from Settings, Apps, Installed apps.

◆

Uninstall or remove apps and programs in Windows | Microsoft Support (https://support.microsoft.com/en-us/windows/uninstall-or-remove-apps-and-programs-in-windows-4b55f974-2cc6-2d2b-d092-5905080eaf98)

Accessed 3 November 2026

29 When something's unclear, it never retries blindly.

◆

30 No saved card: the tool stops.

◆

31 A bank verification appears: the tool waits for you and doesn't click on.

◆

32 A payment isn't confirmed by the platform: it isn't counted.

◆

33 A payment went out without confirmation: the run stops and warns you.

◆

34 The page reloads: a stop stays a stop.

◆

35 A payment counts only when the processor confirms it.

◆

36 The web side can only make settings stricter.

◆

37 Everything starts switched off, with a required list of what's allowed.

◆

38 A quick exit is always there: a keyboard shortcut, a button and a tray menu.

◆

39 A safety word is agreed when consent is given, so a session can end in a second.

◆

40 Visible limits, an emergency stop and nothing that can act without you reduce that risk and never remove it.

◆

41 A dom who really uses consent tools shows them: a stop control, a record of what she can see, and a clear line between teasing and harm.

◆

42 She’s paid by the sends, so she can stop, listen and point you elsewhere, but she can’t manage your limits.

◆

43 Your bank, a person you trust, or a blocker you chose and can’t easily switch off can fill that role.

◆

44 Keys and tokens go into a masked prompt in the owner’s own terminal, never into a chat, a commit or a screenshot.

◆

45 A safe tool holds no names, email addresses or card numbers, and any identifier it creates is random, never built from the computer name or the Windows account name.

◆

46 A guard only counts as an outside check when it runs somewhere the tool can’t edit, and a guard in the same page as the tool can be changed by that page.

◆

47 A safe tool does the opposite, and a maker who copies these is selling a trap with a theme on it.

◆

48 A safe tool shows a fixed price.

TECHDOM & CODE • CHAPTER 3

Code tutorials

LAST CHECKED 3 NOVEMBER 2026 • 9 MINUTES TO READ

Five short programs that show how to make a tool that touches money safe. Each one runs on fake payments, and this page only shows what it really printed.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes

IN 30 SECONDS

01 Every example uses fake payments and runs on your own computer with Node or Python, nothing else installed.

02 A payment is a saved state, so a page reload goes back to waiting and never starts again.

03 The server sets the price and the total, and counts only what the payment provider confirms.

04 A draw is fair when its measured odds match the table shown, and the file that ships must be the file that was tested.

05 Clean an image export, then read it again before you trust it.

YOU WILL LEARN

- ✓ How to run each example and read its real output.

- ✓ Why a saved state, a server-side price and a held unknown outcome protect the person who pays.
- ✓ How to test a draw, a build and an image export instead of trusting them.
- ✓ What a code check can't tell you.

> *This is for people who build tools and for people deciding whether to trust one. Every output below came from a real run, so you can ask any maker for the same proof.*
>
> — VIVIAN

PART 01

How to use these examples

Techdom tools are usually tested on the maker's own machine, with the maker's own card, and shipped in a hurry. What goes wrong is simple: money charged wrongly, a live session that freezes, a tool that keeps running after a payment. ◆ The habits below protect the person who plays and the person who builds.

Each example is a folder with a few files and a one-line command. The programs use only what comes with Node or Python. They never open a network connection, a checkout or another person's account, and every amount in them is made up. The rules for a real tool are in Safe design.

Run any example on your own computer

1. Copy one example folder to a new folder.
2. Open `run.txt`. It holds one line, the command to run.
3. Run that command from inside the folder.
4. Compare what prints with the output described on this page.
5. Change one number, run it again, and see which line changes.

PART 02

1. A payment is a saved state

A bank confirmation step often sends the person back to the page, and the page reloads. A script that starts from the top on every load then begins the payment again, even when the order message has already appeared. The fix is to keep a record outside the page: the attempt, its state and the last thing the provider said. When the page loads, it reads that record and goes back to waiting. ◆

A timer that unlocks the page after one minute doesn't fix it. It hides the fault and invites a second attempt at the worst moment. ◆

A payment attempt with a fake provider

confirm_state.js

```
'use strict';
// One payment attempt as a small state machine.
// The provider is a fake that lives in memory. No money, no
network, no real checkout.
//
// States of the saved record: awaiting -> confirmed | failed |
held
// Everything the page must remember lives in `store`, which
stands for storage
// that survives a reload. Nothing important is kept in a plain
variable.

const usd = (cents) => 'USD ' + (cents / 100).toFixed(2);

function fakeProvider(answers) {
  const attempts = new Map(); // attempt id -> amount in cents
  let polls = 0;
  return {
    create(id, cents) { if (!attempts.has(id)) attempts.set(id,
cents); },
    status(id) {
      if (!attempts.has(id)) return 'none';
      return answers[Math.min(polls++, answers.length - 1)];
    },
    attemptCount: () => attempts.size,
  };
}

// What runs every time the page loads or reloads.
function loadPage({ provider, store, limitCents }) {
  return {
    pay(cents) {
      if (store.stop) return 'refused: stopped';
// the stop is read first
      const rec = store.record;
      if (rec && (rec.state === 'awaiting' || rec.state ===
```

```
'held')) {
        return 'refused: already ' + rec.state;
// a reload never starts a second attempt
      }
      if (store.confirmed + cents > limitCents) return
'refused: limit ' + usd(limitCents);
      const id = 'attempt-' + (++store.seq);
      store.record = { id, cents, state: 'awaiting' };
      provider.create(id, cents);
      return 'started ' + usd(cents);
    },
    poll() {
      const rec = store.record;
      if (!rec || rec.state !== 'awaiting') return rec ?
rec.state : 'idle';
      const answer = provider.status(rec.id);
      if (answer === 'pending') return 'pending';
      if (answer === 'confirmed') { rec.state = 'confirmed';
store.confirmed += rec.cents; }
      else if (answer === 'failed') rec.state = 'failed';
      else rec.state = 'held';
// any other answer is unknown: hold
      return rec.state;
    },
    resolveHeld(didHappen) {
// only a person calls this, after checking
      const rec = store.record;
      if (!rec || rec.state !== 'held') return false;
      rec.state = didHappen ? 'confirmed' : 'failed';
      if (didHappen) store.confirmed += rec.cents;
      return true;
    },
  };
}

const newStore = () => ({ record: null, confirmed: 0, seq: 0,
stop: false });
const say = (label, value) => console.log(label.padEnd(24) + ':
' + value);

```

```
  // The fault: a page that starts a fresh attempt every time it
  loads.
  {
    const provider = fakeProvider(['pending']);
    let seq = 0;
    const naiveLoad = () => provider.create('naive-' + (++seq),
  500);
    naiveLoad();   // first load
    naiveLoad();   // the bank page returns and the page reloads
    say('naive page, 1 click', provider.attemptCount() + '
  attempts at the provider');
  }

  // The fix: the record is saved, and a reload resumes waiting.
  {
    const provider = fakeProvider(['pending', 'confirmed']);
    const store = newStore();
    let page = loadPage({ provider, store, limitCents: 800 });
    say('pay USD 5.00', page.pay(500));
    page = loadPage({ provider, store, limitCents: 800 });
  // the reload
    say('pay again after reload', page.pay(500));
    say('attempts at provider', provider.attemptCount());
    say('poll 1', page.poll());
    say('poll 2', page.poll());
    say('confirmed so far', usd(store.confirmed));
    say('pay USD 5.00 again', page.pay(500));
  // 5 + 5 would pass the limit of 8
    store.stop = true;
    say('pay USD 1.00 after stop', page.pay(100));
  }

  // An unknown answer is never repeated. It waits for a person.
  {
    const provider = fakeProvider(['timeout']);
    const store = newStore();
    const page = loadPage({ provider, store, limitCents: 800 });
    page.pay(300);
    say('poll, odd answer', page.poll());
    say('pay while held', page.pay(300));
```

```
  page.resolveHeld(false);
// the person checked: nothing was taken
  say('after checking', store.record.state + ', counted ' +
usd(store.confirmed));
}
```

```
OUTPUT  node confirm_state.js
naive page, 1 click     : 2 attempts at the provider
pay USD 5.00            : started USD 5.00
pay again after reload  : refused: already awaiting
attempts at provider    : 1
poll 1                  : pending
poll 2                  : confirmed
confirmed so far        : USD 5.00
pay USD 5.00 again      : refused: limit USD 8.00
pay USD 1.00 after stop : refused: stopped
poll, odd answer        : held
pay while held          : refused: already held
after checking          : failed, counted USD 0.00
```

In the output, the naive page makes two attempts for one click and the saved-record page makes one. The second click is refused while the attempt is awaiting, the total counts only after `confirmed`, a send that would go over the limit of USD 8.00 is refused, a stop refuses the next send, and an odd answer becomes `held`.

Three rules come out of it. The stop is read before anything else, and it blocks new sends; it never hides money that was already confirmed. Don't treat an unknown answer as a failure: nothing repeats until a person has looked at the real account. A read can safely be asked again, but a call that creates a payment must never be sent twice. ◆

PART 03

2. The server decides

Anything a person's own device says about money, time or identity can be changed on that device. So the server holds the rules that matter:

- Prices come from a catalogue on the server. The amount the client claims is never read.
- The amount counted is the amount the provider reports, and a mismatch is held, never rounded away.
- A payment counts only when the provider confirms it, and an order still in doubt counts against the limit at its full amount.
- The person is stored as a keyed hash, never as a name or an email address.
- Time is judged by the server clock, never the phone clock.

A catalogue, a limit and a ledger

server_decides.py

```
"""The server decides the price, the total and who is who. The
client only asks.

Everything here is in memory and fake: there is no payment
provider, no network and no real key.
Amounts are whole cents so that no rounding surprise can hide
in them.
"""
import hashlib
import hmac

CATALOGUE = {"small-gift": 500, "medium-gift": 1000}   # the
only place a price exists
LIMIT_CENTS = 1500                                       # set
by the person who pays, in advance

print("same person, same tag :", pseudonym(who) ==
pseudonym("person@example.invalid"))
```

OUTPUT python server_decides.py

```
client claims 1 cent  : order-1 created for USD 5.00
unknown item          : refused: unknown item
count before the event: USD 5.00
provider, wrong sum   : order-1 held: expected USD 5.00, provider
says USD 1.00
provider, right sum   : order-1 counted USD 5.00
order 2               : order-2 created for USD 10.00
order 3 over the limit  : refused: limit USD 15.00
```

```
provider, cancelled   : order-2 closed, nothing counted
order 3 after cancel  : order-3 created for USD 10.00
confirmed total       : USD 5.00
raw identifier stored : False
same person, same tag : True
```

The client claims one cent and is still told USD 5.00, because only the catalogue is read. An unknown item is refused. A provider report of the wrong sum is held, a report of the right sum is counted, and a third order is refused because USD 5.00 confirmed plus USD 10.00 in doubt already reaches the limit of USD 15.00. After a cancellation the same order is accepted. The ledger never contains the raw identifier.

The person who pays sets the limit while calm, before the session. The server holds it so it can't be moved mid-session. A test once found an amount to debit that quietly came back as zero, so test zero, a negative number and a very large one. ◆

PART 04

3. A draw you can check

A game with a draw shows a prize table. The only fair promise is that the table is what the code does. ◆ Three habits make that true: check that the table adds up, draw without bias, and measure the real draw against the table.

Mapping a random number with the remainder operator gives some results more chances than others. ◆ The example shows it on a small range, where the effect is easy to count. Then it throws away the top of the range that would favour small tickets, and runs the real draw many times.

A draw measured against its shown odds

fair_draw.js

```
'use strict';
// A draw whose odds match the table shown to the player, with
fictional chips only.
// Three habits: check the table, draw without bias, and
measure the draw against the table.
const { webcrypto } = require('node:crypto');

const SHOWN = [
  ['5 chips', 25], ['10 chips', 25], ['20 chips', 20], ['50
chips', 12],
  ['100 chips', 9], ['250 chips', 6], ['1000 chips', 3],
];
const TICKETS = 10000; // one ticket is 0.01 of a percentage
point

function checkTable(table) {
  const total = table.reduce((sum, [, percent]) => sum +
percent, 0);
  if (total !== 100) throw new Error('table adds up to ' +
total + ', not 100');
  return true;
}

// Habit 1. Mapping a random number with % gives some outcomes
one more chance than others.
function showModuloBias() {
  const counts = new Array(10).fill(0);
  for (let value = 0; value < 256; value++) counts[value %
10]++;
  console.log('bytes 0..255 mapped with % 10 land on 0..9 this
many times:');
  console.log('  ' + counts.join(' '));
}

// Habit 2. Throw away the top of the range that would favour
small tickets.
```

```
const LIMIT = 2 ** 32 - (2 ** 32 % TICKETS);
function randomTicket() {
  const buffer = new Uint32Array(1);
  do { webcrypto.getRandomValues(buffer); } while (buffer[0] >=
LIMIT);
  return buffer[0] % TICKETS;
}

function pickByTable(table) {
  return (ticket) => {
    let edge = 0;
    for (const [name, percent] of table) {
      edge += percent * 100;
      if (ticket < edge) return name;
    }
    throw new Error('ticket out of range');
  };
}

// Habit 3. Run the real draw many times and compare each share
with the shown table.
function matchesShown(pick, shown, rounds) {
  const counts = new Map(shown.map(([name]) => [name, 0]));
  for (let i = 0; i < rounds; i++) {
    const name = pick(randomTicket());
    counts.set(name, counts.get(name) + 1);
  }
  return shown.every(([name, percent]) =>
Math.abs(counts.get(name) / rounds - percent / 100) < 0.005);
}

checkTable(SHOWN);
console.log('shown table adds up to 100:', true);
try {
  checkTable([['5 chips', 50], ['10 chips', 49]]);
} catch (error) {
  console.log('wrong table refused:', error.message);
}

showModuloBias();
```

```
const draw = pickByTable(SHOWN);
const edges = [0, 2499, 2500, 4999, 5000, 7000, 8200, 9100,
9700, 9999];
console.log('edge tickets give:', edges.map(draw).join(' | '));

const ROUNDS = 200000;
console.log('draw matches the shown odds over ' + ROUNDS + '
rounds:', matchesShown(draw, SHOWN, ROUNDS));

// A build step that resets every weight to an equal share. The
source was fine, the shipped draw is not.
const drawEqual = (ticket) => SHOWN[Math.floor(ticket /
(TICKETS / SHOWN.length))][0];
console.log('equal-weights build matches the shown odds:',
matchesShown(drawEqual, SHOWN, ROUNDS));
```

```
OUTPUT  node fair_draw.js
shown table adds up to 100: true
wrong table refused: table adds up to 99, not 100
bytes 0..255 mapped with % 10 land on 0..9 this many times:
  26 26 26 26 26 26 25 25 25 25
edge tickets give: 5 chips | 5 chips | 10 chips | 10 chips | 20
chips | 50 chips | 100 chips | 250 chips | 1000 chips | 1000 chips
draw matches the shown odds over 200000 rounds: true
equal-weights build matches the shown odds: false
```

A table that adds up to 99 is refused. Counting the bytes 0 to 255 under the remainder operator gives six results 26 chances and four results 25, which is the bias. The edge tickets land on the right prizes, and over 200000 rounds the real draw stays within half a point of every shown share. The build with equal weights doesn't.

The prizes in the example are fictional chips. A checked draw makes a game honest. It doesn't make it safe. A fair game with a house edge still pays back less than it takes, so the limit is what protects the player. ◆ The pressure

designs no draw check can excuse, such as hidden totals and near-misses, are named in Safe design.

V

VIVIAN'S FIELD NOTES

An honest prize table costs the maker some income, because it gives up the near-miss and the hidden total. Safe design often earns less. That's just how it is.

◆

PART 05

4. Verify what ships

The file you tested isn't always the file you ship. A build step can change behaviour: an obfuscation step can reset the option weights, so the shipped wheel isn't the one that was tested. A wrong version can charge an amount different from the one it shows. A test switch that skips payment can stay on in a build handed to someone else. ◆

Three builds, one checker

ship_check.py

```
"""Check the file that ships, not the file you wrote.

Three small files are built in a temporary folder, so nothing
outside it is touched.
The checker compares the shipped file with the one that was
tested, the odds with the table shown
to the player, the amount shown with the amount charged, and
looks for a leftover test switch.
"""
import hashlib
import json

            for line in found:
                print("  - " + line)
        else:
            print("  accepted")
```

OUTPUT `python ship_check.py`

```
tested file hash starts with 148447d35d7d
build-a.json hash 148447d35d7d
  accepted
build-b.json hash 9f7e9766f724
  REFUSED
  - odds differ from the table shown
  - odds add up to 98, not 100
build-c.json hash 63ac7b010e79
  REFUSED
  - large shows USD 10.00 but charges USD 1.00
  - test switch skip_payment is on
```

Build A has the same hash as the tested file and is accepted. Build B has flattened odds that add up to 98 and is refused. Build C shows USD 10.00 but charges USD 1.00, and has a test switch left on, so it's refused too.

A matching hash only proves you hold the tested file. It says nothing about whether that file is good. If a maker publishes no hash, file size is a weak check, and the amount shown against the amount charged is the check that matters.

- The person installing can use the same idea; see Check a tool before you install it.

After any change made by an AI assistant, retest the whole tool. Asked to improve one visual feature, an assistant can also break parts that worked. The safe-design rules apply whichever model wrote the code, and unreviewed code that handles money is a risk to the people who run it. ◆

V

VIVIAN'S FIELD NOTES

I don't trust an assistant's first answer on anything that touches money. After retesting everything, I get a second reader, a person or another model, to read the part that holds the money.

◆

PART 06

5. Break your guards on purpose

A guard that's never been attacked is a guess. A script that breaks each protection in turn on a throwaway copy, and reports which ones held, finds what reading never will. A first version of a guard can let a stop slip through when two stops arrive at the same moment. Testing at the layer that stores the totals shows the gap, and that layer must then be made to refuse. ◆

Never run a test like this on real data. Work on a copy, with fake money.

TRY IT

Which test finds the flaw?

A guard checks that the total plus the new amount stays under the limit, then records the send. In review it looks correct. Which test is most likely to find a flaw?

A Send two requests at the same instant to a throwaway copy and check the stored total

The right answer. Correct. Checking and then recording leaves a gap where both requests pass the check. Test at the layer that stores the totals, and make that layer refuse.

B Read the code once more and confirm the order of the checks

Not this one. Reading already found nothing. The flaw is in the timing, and reading rarely shows timing.

C Send one request at a time, many times

Not this one. Sequential tests pass because the gap never opens.

D Try one real payment of a small amount

Not this one. Real money proves little here and puts a person at risk. A copy with fake money lets you repeat the test as often as you like.

PART 07

6. Clean an export, then read it again

Images from generators and editors can carry hidden text: a program name, a time, a place, sometimes the whole prompt. For a persona who stays anonymous, that's a leak. ◆ See Stay anonymous.

The safe method lists what a plain picture needs and drops everything else, instead of listing what to remove. Then the cleaned file is read again, and the export is refused if anything else is left or if the file doesn’t parse. A browser can add a colour profile on its own when it saves an image, so the check has to read what was really written. ◆

An allow-list strip with a second look

scrub_check.js

```
'use strict';
// Clean an image export and then check the result, using a
tiny PNG-shaped file built in memory.
// The rule: name what a plain picture needs, drop every other
chunk, re-read the result,
// and refuse the export if anything else is still there or if
the file does not parse.

const SIGNATURE = Buffer.from([0x89, 0x50, 0x4e, 0x47, 0x0d,
0x0a, 0x1a, 0x0a]);
const KEEP = new Set(['IHDR', 'PLTE', 'tRNS', 'IDAT',
'IEND']);

const TABLE = Array.from({ length: 256 }, (_, n) => {
  let c = n;
  for (let k = 0; k < 8; k++) c = c & 1 ? 0xedb88320 ^ (c >>>
1) : c >>> 1;
  return c >>> 0;
});

function crc32(buffer) {
  let c = 0xffffffff;
  for (const byte of buffer) c = TABLE[(c ^ byte) & 255] ^ (c
>>> 8);
  return (c ^ 0xffffffff) >>> 0;
}

function makeChunk(type, data) {
  const body = Buffer.concat([Buffer.from(type, 'latin1'),
data]);
  const head = Buffer.alloc(4);
  head.writeUInt32BE(data.length);
  const tail = Buffer.alloc(4);
  tail.writeUInt32BE(crc32(body));
  return Buffer.concat([head, body, tail]);
}

  exportSafely(original.subarray(0, original.length - 5));
} catch (error) {
```

```
  console.log('cut-off file:', 'refused, ' + error.message);
}

// Prove that the second look works: a strip that forgets one
chunk type is caught by the re-read.
const careless = Buffer.concat([SIGNATURE,
...readChunks(original)
  .filter((c) => KEEP.has(c.type) || c.type === 'tEXt')
  .map((c) => original.subarray(c.start, c.end))]);
console.log('careless strip, second look:',
leftovers(careless).join(','));
```

```
OUTPUT  node scrub_check.js
before   : IHDR,tEXt,tIME,eXIf,tEXt,IDAT,IEND
dropped  : tEXt,tIME,eXIf,tEXt
after    : IHDR,IDAT,IEND
bytes    : 202 -> 60
cut-off file: refused, truncated chunk
careless strip, second look: tEXt,tEXt
```

The made-up file holds two text chunks, a time and a camera-style data chunk besides the picture. The strip drops those four, and the file shrinks from 202 to 60 bytes. A file cut short is refused, and a careless strip that forgot text chunks is caught by the re-read.

Video needs the same care: date, program, encoder and hidden notes. Anything handed out should carry no source, comments, handles or other identifying metadata. ◆

PART 08

7. What code can’t check for you

Some things have to be measured. Web accessibility guidance asks that a page doesn’t flash more than three times in any one-second period, unless the flash

stays below set thresholds. ◆ Flashing content can cause migraines, dizziness, nausea and seizures. ◆ A tool that makes spirals and loops needs a measured flash check that reads every frame, including the seam where the loop restarts; see Hypno and edits. A page can read the visitor's request for less motion with the CSS feature `prefers-reduced-motion`. ◆

A working payment path doesn't prove the sensory layer works. ◆ Flicker, a chaotic spiral or a hum can pass every payment test.

What a maker says, and the test that answers it

WHAT THEY SAY OR DO

01 *It works on my machine*

THE COUNTER

Test the way the person meets it: signed out, on a phone, and with a fake provider first. ◆

WHAT THEY SAY OR DO

02 *One small real payment won't hurt*

THE COUNTER

Fake provider first, the provider test mode next, and a real payment only at the very end, tiny, with the amount written down in advance and a recording. Never open-ended. ◆

WHAT THEY SAY OR DO

03 *The page unlocks itself after a minute, so a hang can't matter*

THE COUNTER

A timer hides a stuck state. Find out why it's stuck and give it a waiting state. ◆

WHAT THEY SAY OR DO

04 *The option names are the same, so the links are fine*

THE COUNTER

Store a direct link or identifier per option, and retest every option after anything is recreated or renamed. ◆

A tool that handles money is only as safe as the last thing nobody tested.

Small pitfalls

A modal dialog

It can hide the bank window that asks the person to confirm. Test with the real window layout. ◆

A strict content policy

A rule written as “none” next to other sources can break the payment page. ◆

Capitalising styles

They change the text a person sees, and a test that reads the page text then fails. ◆

A preview server

It can keep old modules, so a fix looks broken or a fault looks fixed. Restart it. ◆

TRY IT

Check yourself

QUESTION 1 OF 4

Which value decides what a send costs?

- ◯ The amount the page sends
- ◯ The price in the server catalogue
- ◯ The amount the person types

Answer. The price in the server catalogue. Whoever holds the device can change what the client sends. The server reads its own catalogue.

QUESTION 2 OF 4

A bank confirmation returns and the page reloads. What should the code do?

- ◯ Read the saved record and go back to waiting
- ◯ Start a new attempt to be safe
- ◯ Unlock the page after a minute

Answer. Read the saved record and go back to waiting. A reload must never start a second attempt. A timer only hides the fault.

QUESTION 3 OF 4

The provider sends an answer the code doesn't recognise. What's the safest next state?

- ◯ Held, until a person checks the real account
- ◯ Failed, then retry at once
- ◯ Confirmed, so the player isn't annoyed

Answer. Held, until a person checks the real account. An unknown outcome may be a payment that went through. Repeating it could take the money twice.

QUESTION 4 OF 4

A shipped file has the same hash as the tested file. What does that prove?

- ◯ You hold the file that was tested, nothing about whether it's good
- ◯ The tool is safe to use
- ◯ The odds are fair

Answer. You hold the file that was tested, nothing about whether it's good. A hash identifies a file. Safety and fairness need their own tests.

REMEMBER IT

- Save the payment state outside the page, and let a reload go back to waiting.
- The server sets the price, reads the amount from the provider and counts only confirmed payments.
- Hold an unknown outcome until a person checks. Never repeat it.
- Measure a draw against the table shown, and test the file that ships.
- Strip an export by allow-list, then read it again.
- Test on copies with fake money, and retest the whole tool after every change.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.

◆ Plausible, not proven yet.

01 Techdom tools are usually tested on the maker's own machine, with the maker's own card, and shipped in a hurry.

◆

02 What goes wrong is simple: money charged wrongly, a live session that freezes, a tool that keeps running after a payment.

◆

03 A bank confirmation step often sends the person back to the page, and the page reloads.

◆

04 A script that starts from the top on every load then begins the payment again, even when the order message has already appeared.

◆

05 The fix is to keep a record outside the page: the attempt, its state and the last thing the provider said.

◆

06 When the page loads, it reads that record and goes back to waiting.

◆

07 A timer that unlocks the page after one minute doesn't fix it.

◆

08 It hides the fault and invites a second attempt at the worst moment.

◆

09 The stop is read before anything else, and it blocks new sends; it never hides money that was already confirmed.

◆

10 Don’t treat an unknown answer as a failure: nothing repeats until a person has looked at the real account.

◆

11 A read can safely be asked again, but a call that creates a payment must never be sent twice.

◆

12 Anything a person’s own device says about money, time or identity can be changed on that device.

◆

13 The amount the client claims is never read.

◆

14 The amount counted is the amount the provider reports, and a mismatch is held, never rounded away.

◆

15 A payment counts only when the provider confirms it, and an order still in doubt counts against the limit at its full amount.

◆

16 The person is stored as a keyed hash, never as a name or an email address.

◆

17 Time is judged by the server clock, never the phone clock.

◆

18 The person who pays sets the limit while calm, before the session.

◆

19 The server holds it so it can’t be moved mid-session.

◆

20 A test once found an amount to debit that quietly came back as zero, so test zero, a negative number and a very large one.

◆

21 The only fair promise is that the table is what the code does.

◆

22 Mapping a random number with the remainder operator gives some results more chances than others.

◆

23 A fair game with a house edge still pays back less than it takes, so the limit is what protects the player.

◆

24 An honest prize table costs the maker some income, because it gives up the near-miss and the hidden total. Safe design often earns less. That's just how it is.

◆

25 A build step can change behaviour: an obfuscation step can reset the option weights, so the shipped wheel isn't the one that was tested.

◆

26 A wrong version can charge an amount different from the one it shows.

◆

27 A test switch that skips payment can stay on in a build handed to someone else.

◆

28 It says nothing about whether that file is good.

◆

29 If a maker publishes no hash, file size is a weak check, and the amount shown against the amount charged is the check that matters.

◆

30 Asked to improve one visual feature, an assistant can also break parts that worked.

◆

31 The safe-design rules apply whichever model wrote the code, and unreviewed code that handles money is a risk to the people who run it.

◆

32 I don’t trust an assistant’s first answer on anything that touches money. After retesting everything, I get a second reader, a person or another model, to read the part that holds the money.

◆

33 A script that breaks each protection in turn on a throwaway copy, and reports which ones held, finds what reading never will.

◆

34 A first version of a guard can let a stop slip through when two stops arrive at the same moment.

◆

35 Testing at the layer that stores the totals shows the gap, and that layer must then be made to refuse.

◆

36 Images from generators and editors can carry hidden text: a program name, a time, a place, sometimes the whole prompt.

◆

37 For a persona who stays anonymous, that’s a leak.

◆

38 The safe method lists what a plain picture needs and drops everything else, instead of listing what to remove.

◆

39 Then the cleaned file is read again, and the export is refused if anything else is left or if the file doesn't parse.

◆

40 A browser can add a colour profile on its own when it saves an image, so the check has to read what was really written.

◆

41 Video needs the same care: date, program, encoder and hidden notes.

◆

42 Anything handed out should carry no source, comments, handles or other identifying metadata.

◆

43 Web accessibility guidance asks that a page doesn't flash more than three times in any one-second period, unless the flash stays below set thresholds.

◆

53 They change the text a person sees, and a test that reads the page text then fails.

◆

54 Restart it.

◆

Check a tool before you install it

LAST CHECKED 3 NOVEMBER 2026 • 7 MINUTES TO READ

A techdom tool runs on your side of the screen, next to your sign-ins and your saved card. Ten minutes of checking before you install it shows what it can read, what it sends and whether you can stop it.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 In my experience most risky tools aren't malware. They do what they say, with a hidden price or no way out.

02 Read the permissions, the addresses it talks to, the updater, the defaults and the stop.

03 Never test an unknown tool on the computer where you're signed in.

04 A check lowers the risk. It never makes an unknown tool safe.

05 Remote access is a red line, and you can remove a tool you doubt.

YOU WILL LEARN

- ✓ What a tool can read, send and change once it's installed.
- ✓ A ten-minute check, in order, with three small scripts that run for real.
- ✓ How to word a verdict about a tool without overclaiming.
- ✓ Which lines to refuse, and what to do if a tool is already installed.
- ✓ The same checks from the maker's side.

> *Don't trust me, a label or a friendly maker. Spend ten minutes first, and walk away from any tool that won't let you check. It makes you a lot harder to surprise.*
>
> — VIVIAN

PART 01

Why check at all

A techdom tool runs on your side of the screen, often inside your signed-in browser, next to a saved card. ◆ See How techdom tools work for the families.

In my experience the usual danger is a tool that does exactly what it says, with a hidden price or no way out. Malware is the rarer case. ◆ So the check covers design (stop, limit, running total, defaults) as well as code (permissions, addresses, updater).

Press describes a scene flooded with scammers who use stolen photos of attractive women. ◆ A free tool offered by a stranger deserves the same doubt as a beautiful profile. ◆

A check lowers the risk, and that's all it does. Your best protection is the limit you set before you start. See Breaks that hold. If you need a checklist to feel safe, not installing is a fine answer. ◆

PART 02

A ten-minute check

Do the steps in order. If you can't do one, that's your answer.

Ten-minute check

1. Find the maker. A maker with a history you can check counts, and a persona or a handle counts too. A tool from someone with no history at all has already failed.
2. Open the permission list and the site list. Write down every line you can’t explain.
3. List the addresses it talks to and find out who runs each one.
4. Find the updater. Can it fetch and run new files, and who decides when?
5. Check the defaults: does it start switched off? Does it show a running total? Is there a limit you set?
6. Test the stop in every state: idle, running, locked, just after a payment. A stop that fails in one state is a defect.
7. Compare the file you got with the fingerprint the maker published.
8. Try it in a virtual machine or a fresh browser profile with none of your sign-ins.

V

VIVIAN'S FIELD NOTES

I never run an unknown program on the computer where I'm signed in. A throwaway setup costs time, and that's cheap next to a drained card.

◆

Reading the permissions

When you add an extension, Chrome shows permission warnings that describe what the permissions allow. ◆ Host permissions are what let an extension work with the sites that match its listed patterns. ◆ Some permissions are optional: granted while the extension runs, not at install. ◆

After install you can open Extensions, then Manage extensions, then a tool's Details page to see which sites it may access. ◆ That page has a setting for whether the tool may read and change your data on every website you visit. ◆

If an update adds a permission that triggers a warning, Chrome disables the extension until you accept it. ◆ An update that stays within the permissions it already has asks you nothing. ◆ The Chrome Web Store requires extensions to disclose how they handle user data, even when it never leaves the device. ◆ A tool you load from a folder skips that listing, so there's no disclosure to read. ◆

Here are common permissions in my own words. Chrome's own pages are the reference. ◆

What common permissions let a tool do

tabs

WHAT IT LETS THE TOOL DO

See the address of every open tab

WHAT TO ASK

Why does a tool for one site need all of them?

cookies

WHAT IT LETS THE TOOL DO

Read and write cookies

WHAT TO ASK

Does it need your sign-in on any site?

webRequest

WHAT IT LETS THE TOOL DO

See every request your browser makes

WHAT TO ASK

What does it do with them?

scripting

WHAT IT LETS THE TOOL DO

Insert code into pages

WHAT TO ASK

Into which pages, and who wrote that code?

Site access to all websites

WHAT IT LETS THE TOOL DO

Work on every page you open

WHAT TO ASK

Can it be limited to the one site it serves?

An update address

WHAT IT LETS THE TOOL DO

Fetch new versions from a server

WHAT TO ASK

Who runs it, and can it send any file?

Code you can run

Three short scripts show the idea. Each reads made-up data, opens no network connection and changes nothing on your computer.

Three small checks

manifest_check.py

```
# manifest_check.py - read an extension manifest the way a
stranger would, before installing.
# It reads two invented manifests that sit inside this file. It
opens no file and no network.

SAMPLES = {
    "tight": {
        "manifest_version": 3,
        "name": "Example fan tool",

out who runs it before trusting it"))
```

OUTPUT python host_report.py

```
2 | app.example.test | the tool's own server
2 | cdn.example.test | the tool's own server
1 | metrics.tracker.test | analytics
1 | mystery.host.test | UNKNOWN: find out who runs it before
trusting it
```

pinned_hash.py

```
# pinned_hash.py - compare a file against the fingerprint its
author published.
# The "file" is a few bytes inside this script, so nothing is
downloaded or opened.
import hashlib

published = hashlib.sha256(b"the file the author
released").hexdigest()

def matches(data):
    return hashlib.sha256(data).hexdigest() == published

for label, data in [
    ("the file you got, same bytes", b"the file the author
released"),
    ("the file you got, one byte added", b"the file the author
released!"),
]:
    print(label, "->", "same as published" if matches(data)
else "different: do not run it")
```

OUTPUT python pinned_hash.py

```
the file you got, same bytes -> same as published
the file you got, one byte added -> different: do not run it
```

The fingerprint in the last script is computed inside it. In real life you copy it from the maker's page and compare.

They show a method. They don't give a verdict. A manifest check can't see what the code does, and a matching fingerprint only proves you hold the file the maker published. ◆

PART 03

What a check can't tell you

A verdict has two parts: what the check found, and what it didn't cover. ◆

Words for a verdict

Malicious today.

The tool does harm now. Only say this after reading the whole source, and with the evidence. ◆

Not malicious today, able to become so with one update.

Nothing harmful runs now, but an update could change that, for example when the updater can fetch any file and your sign-ins sit on the same computer. Serious, but not malware. ◆

Harmless in code, unsafe in use.

Nothing hidden is harmful, but the defaults expose you: a machine identifier sent from your names, a safety-word

or quick-exit off by default. ◆

Not checked.

You didn't read it, or couldn't. Treat it as unsafe for any computer that holds your sign-ins. ◆

For a made-up example of a first alarm and a fuller reading, see Fake tools.

Scrambled code doesn't prove bad intent, because makers scramble code to stop people copying it. It does mean you can't verify the tool, and you shouldn't take a tool that holds a signed-in session on trust. ◆

MYTH	FACT
~~No malware was found, so the tool is safe.~~	A tool can do exactly what it says and still hide its price or give you no way out. Check the design as well as the code. ◆
MYTH	FACT
~~The maker says it's safe, so it's safe.~~	A friendly label proves nothing. Trust is the one thing a spending tool shouldn't need. ◆
MYTH	FACT
~~An assistant read the code and found nothing, so it passed an audit.~~	An assistant can miss logic hidden in scrambled code. A summary isn't an audit. ◆

PART 04

Red flags and the red line

These lines come from the person offering the tool or the session. The answer is yours.

What you may hear, and the answer

WHAT THEY SAY OR DO

01 *It's safe, I made it myself.*

THE COUNTER

That's a claim until someone checks it. The same list applies to every tool, including one made by Vivian.

WHAT THEY SAY OR DO

02 *Install this zip, the store would never allow it.*

THE COUNTER

It skips the store's review. Read its stated limits and expect to remove it.

WHAT THEY SAY OR DO

03 *Send me the code on your phone, or your password, so I can set it up.*

THE COUNTER

Never. A real dom doesn't need your password, your login code or your connection code.

WHAT THEY SAY OR DO

04 *There's no stop, it ends when it ends.*

THE COUNTER

Walk away. A stop that depends on your willpower is no stop. Closing the program always works, but don't build your safety on it.

WHAT THEY SAY OR DO

05 *Test it with real money first, one test can't hurt.*

THE COUNTER

A tiny amount you chose, a test account or a recording. Never open-ended.

WHAT THEY SAY OR DO

06 *Open a session and I'll do it for you, or let me read your chats myself.*

THE COUNTER

Say no, and offer nothing from your accounts or your chats. If a session is already open, close it and change your passwords from another device.

Remote access

A remote-session hands your computer to someone else: files, saved passwords and screens. ◆ A US government alert advises people not to give control of their computers or mobile devices to any stranger. ◆ A remote-access vendor tells users not to give device access to people they do not know or trust. ◆ More on the risks in Fake tools.

TRY IT

A dom asks for a session

A dom asks you to open a remote session so she can read your messages. She says it'll take a minute.

A Decline, offer nothing from your accounts, and state your own limit once

The right answer. A session shows everything, and you can't take it back. A capture of your messages hands over private content too.

B Accept, but only for a minute

Not this one. One minute is long enough to open files and saved passwords.

C Accept, because she promised not to look around

Not this one. A promise made in a scene can't be enforced. None of them can.

PART 05

If you already installed it

A tool that stays installed is an ongoing risk: its maker can push a harmful update later. ◆ Removing it is the simplest way out.

On Windows, uninstall from Settings, then Apps, then Installed apps. ◆ Some apps can't be removed there. ◆ To stop one starting with the computer, switch it off in Settings, Apps, Startup, or in Task Manager's Startup tab. ◆ You remove a browser extension from the Manage extensions page. ◆

If a tool you doubt is installed

1. Stop it. Close the program, or turn the computer off. That always works.
2. Remove it, and remove its browser extension too.
3. Sign out everywhere it could reach, then change those passwords from a different computer.
4. Check your order history and bank statement for sends you didn't choose.
5. Set a limit or an alert at your bank.
6. If money left that you didn't mean to send, go to If you already sent. If stopping feels hard, go to Where to get help.

V

VIVIAN'S FIELD NOTES

I treat a signed-in session like a password. Whoever holds it acts as you, and a two-step login doesn't help once the session is taken. After a tool I doubt, I sign out everywhere as well as changing the password.

◆

For makers: the same list from the other side

If you build tools, your users should be able to do every check above.

- Strip source files, comments and metadata before handing a tool out. Leftover handles point to your accounts.
- Check the licence of every third-party part and ship it next to the part.
- Send access keys privately and make them revocable.
- Remove every bypass before a build leaves your machine, and test the shipped build. A build step can change behaviour.
- Publish what the tool sends and to whom, write a plain readme, and test the stop in every state by trying to break it.

A tool described by its own maker, including a tool made by Vivian, is a claim until someone else has checked it.

TRY IT

Check yourself

QUESTION 1 OF 4

A tool asks to read and change your data on every website. What's the first thing to do?

- ◯ Accept, since the maker looks friendly
- ◯ Ask whether it can be limited to the one site it serves, and walk away if not
- ◯ Accept now and review it later

Answer. Ask whether it can be limited to the one site it serves, and walk away if not. Access to every website is the widest access a tool can ask for. Narrow it or leave.

QUESTION 2 OF 4

An update adds a new permission that triggers a warning. What does Chrome do?

- ◯ Nothing until you restart
- ◯ It disables the extension until you accept the new permission
- ◯ It removes the extension

Answer. It disables the extension until you accept the new permission. Chrome disables the extension until the user accepts. ◆

QUESTION 3 OF 4

An assistant read a tool's code and found nothing wrong. Which verdict is honest?

- ◯ The tool is safe
- ◯ Nothing obvious was found in the part that was read
- ◯ The tool passed an audit

Answer. Nothing obvious was found in the part that was read. A summary covers the part that was read. It can't see what's hidden or what an update may add.

QUESTION 4 OF 4

A dom asks you to open a remote session so she can fix your tool. What do you do?

- ◯ Open it, but watch the screen
- ◯ Decline, and offer nothing from your accounts
- ◯ Open it and block your own keyboard so you don't interfere

Answer. Decline, and offer nothing from your accounts. Full control of your computer can't be taken back.

REMEMBER IT

- In my experience most risky tools do what they say, with a hidden price or no way out.
- Check design (stop, limit, total, defaults) as well as code (permissions, addresses, updater).
- An update can change a tool without asking, so treat the update channel as a permission.
- Never test an unknown tool on the computer where you're signed in.
- Remote access is a red line, and a promise can't protect it.
- A verdict states what was read and what wasn't.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.

◆ Plausible, not proven yet.

01 A techdom tool runs on your side of the screen, often inside your signed-in browser, next to a saved card.

◆

02 Malware is the rarer case.

◆

03 Press describes a scene flooded with scammers who use stolen photos of attractive women.

DICTIONARY

Dictionary

LAST CHECKED 3 NOVEMBER 2026 • 25 MINUTES TO READ

The words of 2DFD, one per entry, in plain language. Some name a game, some name a risk, and a few name a line you should never cross.

EVIDENCE ◆ Verified ◆ Reported ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Each entry gives one word of the scene, a plain definition and an example.

02 Some words, like spiral, mean two things. The entry gives both.

03 A few entries are warnings: a missing limit, a missing quick exit, a remote session.

04 A word in a script is play. The money that moves under it is real.

YOU WILL LEARN

- ✓ What the scene's words mean, from tribute and send to persona and limit.
- ✓ Which words come from games, from platforms and from the play itself.
- ✓ How to tell a word that belongs to the script from a sign of risk.

✓ Which chapter to read when a word matters to you.

The scene has its own language, and some of it blurs play and money. Learn a word here before someone uses it on you. If a word means two things, you get both.

— VIVIAN

PART 01

How to read this dictionary

Each entry gives the word's class, a plain definition, a made-up example and, where it helps, a word people mix it up with. Next to it you'll find related words and the chapters that use it.

The marker after each sentence shows how well it's backed. When a public source records a word, the entry cites it. Everything else is a field note from Vivian. How this wiki proves things explains the levels.

Some corners of the scene talk about subs with contempt, and this wiki explains those words without taking them on. ◆

V

VIVIAN'S FIELD NOTES

A lot of words here do two jobs. "Owned", "drained", "slave" and "paypig" belong to the script, and both sides can enjoy them. The money behind those words is outside the script. It's real, and so is any debt it leaves.

◆

PART 02

The words

0–9

2DFD.

noun

Online findom with a 2D persona in place of a real person's face and voice, and whoever runs her stays out of sight. ◆ Most people read it as "2D findom", but that's a guess, because no glossary spells it out. ◆ Doms often put the label in their display name or bio, and if it's missing, the dom may be playing a role without asking for money. ◆

IN A SENTENCE

> *Her page is 2DFD all the way: every post shows the character, never the person.*
>
> Example, invented

DO NOT CONFUSE WITH

findom. Findom is the whole practice; 2DFD is findom with a 2D persona up front.

RELATED WORDS

findom · persona · gen

READ IT IN

What is 2DFD? · 2DFD and classic findom · What a persona is

Last checked 3 November 2026

50/50.

noun

In gacha games, a rule where a pull gives you either the featured item or a different one, like a coin flip. In my experience, losing it often makes people pull again straight away, which is one reason to set your limit in advance. ◆

IN A SENTENCE

> *He lost the 50/50 and pulled again right away.*
>
> Example, invented

DO NOT CONFUSE WITH

pity. A 50/50 is luck; pity is a counter that guarantees a reward after enough pulls.

RELATED WORDS

gacha · pity · pull

Last checked 3 November 2026

A

aftercare.

noun

Care after a scene to check that the other person is okay and calm. It's a short, kind check-in, and a session that ends on a send with nothing after it has skipped it. Tools and apps rarely have anything like it, so the person running the game has to provide it. ◆

IN A SENTENCE

> *She ended the evening with a few kind words and asked how he was doing.*
>
> Example, invented

DO NOT CONFUSE WITH

love bombing. Aftercare is a short, calm check-in after a scene; love bombing is a flood of affection.

RELATED WORDS

safety word · session · love bombing · hard limit

How an evening goes · Your first sub · Ending well · When a sub is in trouble

Last checked 3 November 2026

alt.

noun

A second account the same person keeps next to their main one. Some subs open one just to show off what they sent, which turns spending into a public score. ◆

IN A SENTENCE

> *He opened an alt just to show his sends.*
>
> Example, invented

DO NOT CONFUSE WITH

backup account. An alt is used alongside the main account; a backup account sits unused until the main one is lost.

RELATED WORDS

backup account · billboard · leaderboard

- Pressure tactics, both ways

Last checked 3 November 2026

ATM play.

noun

A session where the dom treats the sub like a cash machine: she gives the order and he pays. It's scripted play and both sides know it, but the money is real, so his limit applies like in any other session. ◆

IN A SENTENCE

> *The ATM play session was a few minutes of commands and sends, and it stopped at his limit.*
>
> Example, invented

DO NOT CONFUSE WITH

paypig. ATM play is a session format; paypig is a scripted nickname.

RELATED WORDS

send · session · paypig · limit

How an evening goes · Tasks, customs and private sessions · The kinks around money

Last checked 3 November 2026

autodrain.

noun

A tool, usually a browser extension, that sends or buys wishlist items for a sub automatically, on a loop, once he starts it. These tools break every time the platform changes its checkout. A safe one comes switched off, does one named thing on one named site and counts only confirmed payments. It shows a running total, enforces a limit set in advance, has a stop that works in every state and can be removed in one click. Hidden totals, locks that take away the stop and overnight modes are pressure designs to spot and refuse, and a safe design often earns less. ◆

IN A SENTENCE

> *Before installing the autodrain, he checked that it showed a running total and that its stop worked at any time.*
>
> Example, invented

DO NOT CONFUSE WITH

autodrone. An autodrain moves money; an autodrone only automates social actions like likes and reposts.

RELATED WORDS

drain · techdom · mercy mode · quick exit · limit

READ IT IN

- Techdom
- How techdom tools work
- Safe design
- Check a tool before you install it
- Fake tools

Last checked 3 November 2026

autodrone.

noun

A browser extension that likes or reposts a dom's posts from the sub's own account while he's busy with something else. The dom gets engagement and the sub gets a hands-off way to serve. No money moves, but the tool acts as him in his own account, and a platform may see that as automation and suspend the account. ◆

IN A SENTENCE

> *The autodrone liked every new post while he worked.*
>
> Example, invented

DO NOT CONFUSE WITH

autodrain. An autodrone spends no money; an autodrain does.

RELATED WORDS

autodrain · techdom · hub · token

READ IT IN

Techdom · How techdom tools work · Check a tool before you install it

Last checked 3 November 2026

B

backup account.

noun

A second account kept idle in case the main one gets closed. ◆ A platform may treat an account made to replace a closed one as ban evasion, and a closed account stays tied to a real identity, so a backup account won't get you back in. ◆

IN A SENTENCE

> *She keeps a backup account idle, and she knows it won't undo a closure.*
>
> Example, invented

DO NOT CONFUSE WITH

alt. A backup account stays idle until needed; an alt is in daily use.

RELATED WORDS

alt · SSB

READ IT IN

Stay anonymous · Posting and workflows

Last checked 3 November 2026

banner.

noun

In gacha games, a themed, often time-limited pool of items you can pull. Scene tools copy the idea with themed card sets, like a seasonal one, and the time limit is a deadline to watch out for. The word also means the image at the top of a social profile. ◆

IN A SENTENCE

> *The bunny banner ends on Sunday.*
>
> Example, invented

DO NOT CONFUSE WITH

billboard. A banner here is a pull pool or a profile image; a billboard is a sub who advertises a dom.

RELATED WORDS

gacha · pull · pity · billboard

READ IT IN

Games and casino play · Roleplay, lore and collabs · Posting and workflows

Last checked 3 November 2026

beta.

noun

Scene slang for a submissive man, often shown as passive in the dom's frame. It's a scripted label, and it doesn't judge the real person. ◆

IN A SENTENCE

> *She calls her regulars beta in her captions, and they like it.*
>
> Example, invented

DO NOT CONFUSE WITH

betadomme. Beta is a sub; a betadomme is a junior dom.

RELATED WORDS

simp · sub · betadomme

READ IT IN

Who is in the scene · The kinks around money

Last checked 3 November 2026

betadomme.

noun

A junior or second dom who works beside an established one, in some communities as a helper or trainee. The role isn't worth much to the junior unless there's a clear reason like training or experience, and it needs agreed terms like any unpaid work. The word also names a kink where a domme is made to lose to a stronger dom. ◆

IN A SENTENCE

> *She joined as a betadomme to learn how the senior dom runs her sessions.*
>
> Example, invented

DO NOT CONFUSE WITH

faildomme. A betadomme answers to a senior dom; a faildomme is a persona built on failing or losing.

RELATED WORDS

faildomme · switch · sub

READ IT IN

Who is in the scene · Roleplay, lore and collabs

Last checked 3 November 2026

billboard.

noun

A sub who shows a dom's branding on his own public profile, like her picture or name, as free advertising. The profile is public, so it also tells everyone he knows that he's a sub, which is why it should be his own choice and easy to undo. ◆

IN A SENTENCE

> *After the rebrand he stayed on as her billboard for a week and then changed it back.*
>
> Example, invented

DO NOT CONFUSE WITH

banner. A billboard is a person acting as an advert; a banner is a pull pool or a profile image.

RELATED WORDS

rebrand · alt · banner

READ IT IN

Posting and workflows · Pressure tactics, both ways

Last checked 3 November 2026

boost.

noun

A sudden jump in a post's reach, usually after a bigger account reposts or interacts with it. You can't plan one, which is one reason income from posting is unreliable. ◆

IN A SENTENCE

> *One repost from a big account gave the post a boost.*
>
> Example, invented

DO NOT CONFUSE WITH

pushed. A boost comes from another account; a pushed post is promoted by the platform's algorithm.

RELATED WORDS

pushed · reach

READ IT IN

Posting and workflows · Numbers

Last checked 3 November 2026

brat.

noun

A sub who plays cheeky or defiant on purpose, teasing or talking back, and the dom is expected to answer inside the game. It's a style of play, and the limits still apply. ◆

IN A SENTENCE

> *He plays the brat and she answers with a mock penalty.*
>
> Example, invented

DO NOT CONFUSE WITH

switch. A brat is a playful attitude of a sub; a switch is someone who takes either side.

RELATED WORDS

switch · sub · session

READ IT IN

The kinks around money · Tasks, customs and private sessions

Last checked 3 November 2026

brokie.

noun

A sub with little money. The word can sound like contempt, and this wiki uses it only to explain it. Playing on a small budget is fine, but a lower price never replaces the limit. If money is short, the money part stops for that evening, and a cheaper option isn't a way to keep spending. ◆

IN A SENTENCE

> *He kept to his small limit, and on the evening he said money was short, the session went on with no send.*
>
> Example, invented

DO NOT CONFUSE WITH

whale. A brokie sends little; a whale sends very large amounts.

RELATED WORDS

whale · mercy mode · limit

READ IT IN

Before your first send · Tributes, sends and wishlists

Last checked 3 November 2026

bypass.

noun

A switch in a test build that skips the payment step or the draining effect so a maker can try a tool safely. It belongs in test builds only and has to be removed before release, so don’t trust a tool that ships with one. ◆

IN A SENTENCE

> *The test build has a bypass, so no real money moves.*
>
> Example, invented

DO NOT CONFUSE WITH

token. A bypass skips a step in a build; a token is a stored credential.

RELATED WORDS

autodrain · token

</> Code tutorials · </> Check a tool before you install it

Last checked 3 November 2026

C

catfish.

noun, verb

A fake account where someone pretends to be another person and posts pictures taken from somewhere else; the press says fake dommes are usually catfish. ◆ The press describes the trick as common and growing in findom, easy to start and possible to run anonymously. ◆ In 2DFD the same trick uses stolen or generated art, usually to take money, so a beautiful character proves nothing about who's behind her. ◆

IN A SENTENCE

> *The art turned out to be copied from another artist, so the account was a catfish.*
>
> Example, invented

DO NOT CONFUSE WITH

persona. A persona is a character shown as a character; a catfish lies about who's behind the pictures to take money.

RELATED WORDS

scamdom · persona · red flag

READ IT IN

What is 2DFD? · Spot a fake dom · Stolen art and persona theft · Case files

Last checked 3 November 2026

code slave.

noun

A sub who writes software for a dom as his way of serving, instead of paying or on top of it. It's fair only when he chose the scope, can say no without losing his place and gets thanked. Otherwise it's free labour dressed up as devotion. ◆

IN A SENTENCE

> *He serves as her code slave and keeps her tool page running, and he's free to say no to a request.*
>
> Example, invented

DO NOT CONFUSE WITH

gen slave. A code slave builds software; a gen slave produces generated images.

RELATED WORDS

gen slave · techdom

READ IT IN

Who is in the scene · Tools and apps

Last checked 3 November 2026

cooldown.

noun

A fixed wait that has to pass before a decision to spend, or to raise a limit, kicks in. It lets a calm decision overrule an excited one, and a day is a good length for any decision pushed by a deadline. A tool can enforce a cooldown as a minimum gap between payments. ◆

IN A SENTENCE

> *He wanted to raise his limit in the middle of the evening, so he wrote the new number down and waited a day.*
>
> Example, invented

DO NOT CONFUSE WITH

quick exit. A cooldown delays a decision; a quick exit ends a tool or a session at once.

RELATED WORDS

limit · quick exit · relapse

READ IT IN

Before your first send · Breaks that hold · Safe design · Pressure tactics, both ways

Last checked 3 November 2026

crash.

noun

A game where a number climbs and you have to cash out before it blows up. Casino-style scene projects list it among their simple house games, and it's best played with fictional chips. ◆

IN A SENTENCE

> *In crash you cash out before the number explodes.*
>
> Example, invented

DO NOT CONFUSE WITH

roulette. Crash is a rising number you must leave in time; roulette is a spin with a random result.

RELATED WORDS

house edge · roulette

READ IT IN

Games and casino play

Last checked 3 November 2026

D

dox.

verb

To expose someone's real identity or address. It's the main safety fear behind anonymity in the scene, so a request for a real name, or for a gift that needs a physical address, is a risk. It can hit the person behind a persona and the sub alike. ◆

IN A SENTENCE

> *Never share anything that could dox you or her.*
>
> Example, invented

DO NOT CONFUSE WITH

persona. Doxing breaks the line between persona and person; a persona is the protected character.

RELATED WORDS

persona · 2DFD

READ IT IN

Stay anonymous · Before your first send · Where to get help

Last checked 3 November 2026

drain.

verb, noun

In scene slang, to take money from a sub, or the flow of money itself. Inside the script it's play. Said about a real person, it means real money leaving, sometimes more than the sub planned, and at that point the game is over. A drain session is a short session built around sends. ◆

IN A SENTENCE

> *The tool drains in small steps while he watches the running total.*
>
> Example, invented

DO NOT CONFUSE WITH

send. A drain is the whole flow, often automatic; a send is one payment.

RELATED WORDS

autodrain · send · session · relapse

READ IT IN

How an evening goes · The spiral · Techdom

Last checked 3 November 2026

F

faildomme.

noun

A persona that plays a failing dom who gets beaten, drained or humiliated by a stronger one. It's a hashtag and a persona type, and also a loose label for a dom who falls short of the role. ◆

IN A SENTENCE

> *Her faildomme character always loses the bet, and the story is the fun of it.*
>
> Example, invented

DO NOT CONFUSE WITH

betadomme. A faildomme is defined by losing; a betadomme is defined by a junior or submissive position.

RELATED WORDS

betadomme · persona · switch

READ IT IN

Roleplay, lore and collabs · The kinks around money

Last checked 3 November 2026

findom.

noun

Financial domination, a fetish where a person gets pleasure from giving money to an online dom. ◆ Researchers describe a findomme being paid in cash or in wishlist gifts. ◆ It's consensual play around money, and a promise made in a scene is part of the play and buys nothing. Anything you sign, borrow or owe is real, and this wiki gives no legal advice. ◆

IN A SENTENCE

> *Findom is a game of roles around money, and the money is real.*
>
> Example, invented

DO NOT CONFUSE WITH

2DFD. Findom is the whole practice; 2DFD is findom with a 2D persona up front.

RELATED WORDS

2DFD · send · tribute · wishlist

Last checked 3 November 2026

G

gacha.

noun

A pay-to-pull game where random rewards come out of draws. In 2DFD tools a pull can trigger a real wishlist purchase and give back a random card of the persona. Hidden odds, forced pulls and a guarantee that sits many pulls away are designs made to keep you pulling, so learn to spot them. ◆

IN A SENTENCE

> *The gacha on her hub gives a random picture for each pull.*
>
> Example, invented

DO NOT CONFUSE WITH

roulette. A gacha gives a collectible per pull; a roulette gives a price or a task per spin.

RELATED WORDS

pull · pity · banner · gamedom

READ IT IN

Gamedom · Games and casino play · The spiral

Last checked 3 November 2026

gamedom.

noun

Dominance through games, like tasks, orders given while the sub plays, or play that involves his game account. A game account is access like any other, so handing it over is never part of the game. ◆

IN A SENTENCE

> *Her gamedom content has him doing her challenges in his favourite game.*
>
> Example, invented

DO NOT CONFUSE WITH

techdom. Gamedom works through games; techdom works through software and tools.

RELATED WORDS

techdom · gacha

Last checked 3 November 2026

gen.

noun, verb

A generated image or video, or making one with an AI model. Many persona accounts depend on gens, and a local gen is one made on the creator's own computer. Every gen of a persona shows an adult, with nothing child-like in the look or the setting, whatever the lore says. ◆

IN A SENTENCE

> *She posts a new gen of her character every morning.*
>
> Example, invented

DO NOT CONFUSE WITH

lora. A gen is one picture or clip; a LoRA is a small add-on model that keeps a character's look steady.

RELATED WORDS

LoRA · gen slave · persona

- Art for your persona
- Stolen art and persona theft
- Hypno and edits

Last checked 3 November 2026

gen slave.

noun

In some communities, a sub who serves by making generated images for a dom's posts. The same fairness rule applies as for any unpaid work: he picks the scope, he's free to refuse and he gets thanked. ◆

IN A SENTENCE

> *Her gen slave sends a fresh batch every week, and he can skip a week without losing his place.*
>
> Example, invented

DO NOT CONFUSE WITH

code slave. A gen slave makes images; a code slave writes software.

RELATED WORDS

code slave · gen

Last checked 3 November 2026

limit.

noun

A spending limit picked by the person who pays, while calm, before the session. It's held outside your own head, in a server that enforces it, a bank limit or a trusted person, and it only goes up after a cooldown. A limit typed in the middle of a session is weak, and a limit is a ceiling, never a target. ◆

IN A SENTENCE

> *She asked him to name his limit before the evening began, and she stopped when he reached it.*
>
> Example, invented

DO NOT CONFUSE WITH

budget. A budget is a plan; a limit is a ceiling that something outside your own head enforces.

RELATED WORDS

cooldown · quick exit · hard limit · pity

Last checked 3 November 2026

LoRA.

noun

A small add-on model trained so an image generator reproduces one character or style. It keeps a persona's look steady across images. It needs a set of consistent images and some technical work, and plenty of people can manage that. A LoRA trained on a real person's face without consent, or on a studio's character sold as free to use, crosses a line of this wiki. ◆

IN A SENTENCE

> *A LoRA keeps her face and outfit the same in every gen.*
>
> Example, invented

DO NOT CONFUSE WITH

character sheet. A LoRA changes the model itself; a character sheet is a reference image.

RELATED WORDS

gen · persona

wishlist.

noun

A public list of gifts a creator accepts. ◆ Researchers describe findommes being paid in wishlist gifts. ◆ In the scene it works as a price menu and the main route for sends, and the wishlist platform has its own terms and a fee. ◆

IN A SENTENCE

> *Her wishlist has items from small to large, and every send picks one.*
>
> Example, invented

DO NOT CONFUSE WITH

tribute. A wishlist is the list; a tribute is the payment made from it.

RELATED WORDS

gift · send · autodrain · tribute

Tributes, sends and wishlists · Where 2DFD happens

Last checked 3 November 2026

PART 03

Ten words to learn first

Ten essential words

2DFD

Online findom with a 2D persona. The character is fiction, and the money is real. ◆

persona

The character a dom plays, with a name, a look, a voice, rules and limits. It's a performance, but the feelings it touches are real. ◆

tribute

A payment offered as homage. It buys nothing, and nobody can enforce a promise made in a scene. ◆

send

One payment from a sub to a dom, often by buying a wishlist item. In practice you can't take it back. ◆

limit

Your own spending limit, set while you're calm, before the session, and held outside your own head. ◆

cooldown

A fixed wait before a new decision to spend, or to raise a limit, kicks in. ◆

quick exit

A control that ends a tool or a session instantly and at no cost. ◆

red flag

A sign that a person, tool or offer may be unsafe: a deadline, a hidden total, a request for access. ◆

remote session

A session where a dom controls your computer. It's a red line of this wiki. ◆

spiral

Spending that started as play and tightens turn by turn. Also the rotating pattern of hypnotic images. ◆

Free, confidential helplines exist in most countries.

Find a helpline →

REMEMBER IT

- A word in a script is play. The money under it is real. ◆
- A limit, a wait and a quick exit matter more than any title or nickname. ◆
- Access to your computer or accounts is never part of the game. ◆
- When a word has two senses, like spiral, the entry gives both. ◆

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

EVIDENCE LEVELS

◆	Checked against the original source.
◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.

◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

01 Some corners of the scene talk about subs with contempt, and this wiki explains those words without taking them on.

◆

02 It’s real, and so is any debt it leaves.

◆

03 Online findom with a 2D persona in place of a real person’s face and voice, and whoever runs her stays out of sight.

◆

04 Most people read it as “2D findom”, but that’s a guess, because no glossary spells it out.

◆

05 Doms often put the label in their display name or bio, and if it’s missing, the dom may be playing a role without asking for money.

◆

06 In gacha games, a rule where a pull gives you either the featured item or a different one, like a coin flip.

◆

07 In my experience, losing it often makes people pull again straight away, which is one reason to set your limit in advance.

◆

08 Care after a scene to check that the other person is okay and calm.

◆

09 It’s a short, kind check-in, and a session that ends on a send with nothing after it has skipped it.

◆

10 Tools and apps rarely have anything like it, so the person running the game has to provide it.

◆

11 A second account the same person keeps next to their main one.

◆

12 Some subs open one just to show off what they sent, which turns spending into a public score.

◆

13 A session where the dom treats the sub like a cash machine: she gives the order and he pays.

◆

14 It’s scripted play and both sides know it, but the money is real, so his limit applies like in any other session.

◆

15 A tool, usually a browser extension, that sends or buys wishlist items for a sub automatically, on a loop, once he starts it.

◆

16 These tools break every time the platform changes its checkout.

◆

17 A safe one comes switched off, does one named thing on one named site and counts only confirmed payments.

◆

18 It shows a running total, enforces a limit set in advance, has a stop that works in every state and can be removed in one click.

◆

19 Hidden totals, locks that take away the stop and overnight modes are pressure designs to spot and refuse, and a safe design often earns less.

◆

20 A browser extension that likes or reposts a dom's posts from the sub's own account while he's busy with something else.

◆

21 The dom gets engagement and the sub gets a hands-off way to serve.

◆

22 No money moves, but the tool acts as him in his own account, and a platform may see that as automation and suspend the account.

◆

23 A second account kept idle in case the main one gets closed.

◆

24 A platform may treat an account made to replace a closed one as ban evasion, and a closed account stays tied to a real identity, so a backup account won't get you back in.

◆

25 In gacha games, a themed, often time-limited pool of items you can pull.

◆

26 Scene tools copy the idea with themed card sets, like a seasonal one, and the time limit is a deadline to watch out for.

◆

27 The word also means the image at the top of a social profile.

◆

28 Scene slang for a submissive man, often shown as passive in the dom's frame.

◆

29 It's a scripted label, and it doesn't judge the real person.

◆

30 A junior or second dom who works beside an established one, in some communities as a helper or trainee.

◆

31 The role isn't worth much to the junior unless there's a clear reason like training or experience, and it needs agreed terms like any unpaid work.

◆

32 The word also names a kink where a domme is made to lose to a stronger dom.

◆

33 A sub who shows a dom's branding on his own public profile, like her picture or name, as free advertising.

◆

34 The profile is public, so it also tells everyone he knows that he's a sub, which is why it should be his own choice and easy to undo.

◆

35 A sudden jump in a post's reach, usually after a bigger account reposts or interacts with it.

◆

36 You can't plan one, which is one reason income from posting is unreliable.

◆

37 A sub who plays cheeky or defiant on purpose, teasing or talking back, and the dom is expected to answer inside the game.

◆

38 It's a style of play, and the limits still apply.

◆

39 A sub with little money.

◆

40 The word can sound like contempt, and this wiki uses it only to explain it.

◆

41 Playing on a small budget is fine, but a lower price never replaces the limit.

◆

42 If money is short, the money part stops for that evening, and a cheaper option isn't a way to keep spending.

◆

43 A switch in a test build that skips the payment step or the draining effect so a maker can try a tool safely.

◆

44 It belongs in test builds only and has to be removed before release, so don't trust a tool that ships with one.

◆

45 A fake account where someone pretends to be another person and posts pictures taken from somewhere else; the press says fake dommes are usually catfish.

◆

The Curse of the Fake Financial Dominatrix (https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Archive (http://web.archive.org/web/20260511185644/https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Accessed 3 November 2026

46 The press describes the trick as common and growing in findom, easy to start and possible to run anonymously.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

47 In 2DFD the same trick uses stolen or generated art, usually to take money, so a beautiful character proves nothing about who's behind her.

◆

48 A sub who writes software for a dom as his way of serving, instead of paying or on top of it.

◆

49 It's fair only when he chose the scope, can say no without losing his place and gets thanked.

◆

50 Otherwise it's free labour dressed up as devotion.

◆

51 A fixed wait that has to pass before a decision to spend, or to raise a limit, kicks in.

◆

52 It lets a calm decision overrule an excited one, and a day is a good length for any decision pushed by a deadline.

◆

53 A tool can enforce a cooldown as a minimum gap between payments.

◆

54 A game where a number climbs and you have to cash out before it blows up.

◆

55 Casino-style scene projects list it among their simple house games, and it's best played with fictional chips.

◆

56 To expose someone's real identity or address.

◆

57 It's the main safety fear behind anonymity in the scene, so a request for a real name, or for a gift that needs a physical address, is a risk.

◆

58 It can hit the person behind a persona and the sub alike.

◆

59 In scene slang, to take money from a sub, or the flow of money itself.

◆

60 Said about a real person, it means real money leaving, sometimes more than the sub planned, and at that point the game is over.

◆

61 A drain session is a short session built around sends.

◆

62 A persona that plays a failing dom who gets beaten, drained or humiliated by a stronger one.

◆

63 It's a hashtag and a persona type, and also a loose label for a dom who falls short of the role.

◆

64 Financial domination, a fetish where a person gets pleasure from giving money to an online dom.

◆

Accessed 3 November 2026

66 It's consensual play around money, and a promise made in a scene is part of the play and buys nothing.

◆

67 Anything you sign, borrow or owe is real, and this wiki gives no legal advice.

◆

68 A financial submissive, a sub who gets pleasure from giving gifts and money to a findom.

◆

How paypigs have been funding their fetish during the pandemic (https://www.dazeddigital.com/life-culture/article/51485/1/how-paypigs-have-been-funding-their-fetish-during-the-pandemic)

Archive (http://web.archive.org/web/20260727185610/https://www.dazeddigital.com/life-culture/article/51485/1/how-paypigs-have-been-funding-their-fetish-during-the-pandemic)

Accessed 3 November 2026

69 The press lists the word next to paypig as a name for the same role.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

70 Finsub is the plainer word, and paypig is the harsher, scripted one.

◆

71 A pay-to-pull game where random rewards come out of draws.

◆

72 In 2DFD tools a pull can trigger a real wishlist purchase and give back a random card of the persona.

◆

73 Hidden odds, forced pulls and a guarantee that sits many pulls away are designs made to keep you pulling, so learn to spot them.

◆

74 Dominance through games, like tasks, orders given while the sub plays, or play that involves his game account.

◆

75 A game account is access like any other, so handing it over is never part of the game.

◆

76 A generated image or video, or making one with an AI model.

◆

77 Many persona accounts depend on gens, and a local gen is one made on the creator's own computer.

◆

78 Every gen of a persona shows an adult, with nothing child-like in the look or the setting, whatever the lore says.

◆

79 In some communities, a sub who serves by making generated images for a dom's posts.

◆

80 The same fairness rule applies as for any unpaid work: he picks the scope, he's free to refuse and he gets thanked.

◆

81 An item from a wishlist that the sub buys.

◆

82 It can also mean a reward image from the dom, and several gifts can be sold together as one bigger item.

◆

83 A firm boundary that someone will not cross.

◆

84 A dom can set one on how much contact she will take on, and a sub can set one on words, topics or money.

◆

85 The share of each bet the house keeps over time.

◆

86 A game that states its edge lets you read the odds, and a game that hides odds or prices is a pressure design.

◆

87 One app or site that puts a persona's tools, links and small games in one place.

◆

88 An autodrain and an autodrone are described as parts that fit inside one, so each part needs the same checks as a standalone tool.

◆

89 Play where the dom treats the sub as small, foolish or worthless, a fantasy some adults choose.

◆

90 It shows up as nicknames and mock scores.

◆

91 Researchers report that some findommes keep humiliation lists of clients who fail to give enough tribute.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Archive (http://web.archive.org/web/20261016030740/https://pmc.ncbi.nlm.nih.gov/articles/PMC8418458/)

Accessed 3 November 2026

92 It's play only while the sub chose it and can end it, and humiliation that goes on after he asks to stop isn't a game anymore.

◆

93 A short looped video or GIF with spirals, rings or words, made to be watched over and over.

◆

94 Accessibility guidelines say a page must not flash more than three times in any one second, unless the flash is below set thresholds.

◆

Web Content Accessibility Guidelines (WCAG) 2.2 (https://www.w3.org/TR/WCAG22/)

Accessed 3 November 2026

96 A ranking of subs by how much they sent or how far they got, kept by the dom and sometimes shown in public.

◆

97 A public tally turns spending into a contest, which is a pressure design to watch for, so a name should only go on one by choice.

◆

98 A spending limit picked by the person who pays, while calm, before the session.

◆

99 It's held outside your own head, in a server that enforces it, a bank limit or a trusted person, and it only goes up after a cooldown.

◆

100 A limit typed in the middle of a session is weak, and a limit is a ceiling, never a target.

◆

101 A small add-on model trained so an image generator reproduces one character or style.

◆

102 It keeps a persona's look steady across images.

◆

103 It needs a set of consistent images and some technical work, and plenty of people can manage that.

◆

104 A LoRA trained on a real person's face without consent, or on a studio's character sold as free to use, crosses a line of this wiki.

◆

105 Flooding someone with affection and praise.

◆

106 Between willing partners it's a playful ritual, and anywhere else it's a known pressure tactic.

◆

107 The test is whether the warmth is steering the spending.

◆

108 A reduced-price option offered to subs with less money.

◆

109 It makes each step smaller but doesn't limit the total, so a limit is still needed.

◆

110 It isn't meant for a sub who has said money is short: then the money part stops for that evening.

◆

111 A title given to a client who gives money, and one of the demeaning titles, with money pig, that researchers list.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Archive (http://web.archive.org/web/20261016030740/https://pmc.ncbi.nlm.nih.gov/articles/PMC8418458/)

Accessed 3 November 2026

112 The press reports that some money slaves enjoy being in debt.

◆

How paypigs have been funding their fetish during the pandemic (https://www.dazeddigital.com/life-culture/article/51485/1/how-paypigs-have-been-funding-their-fetish-during-the-pandemic)

Archive (http://web.archive.org/web/20260727185610/https://www.dazeddigital.com/life-culture/article/51485/1/how-paypigs-have-been-funding-their-fetish-during-the-pandemic)

Accessed 3 November 2026

113 The title belongs to the script, but any debt doesn't: it's real, and no sub needs it to play.

◆

114 A word borrowed from games: to weaken something, said of a tool whose main trick stopped working after a platform update, or of an account whose reach got cut.

◆

115 A long-term sub who belongs to one dom in a lasting dynamic and is expected to be exclusive to her, unlike a casual sender.

◆

116 Some subs prefer to use the persona's name instead of an owner title.

◆

117 An owner who asks for passwords, codes or control of your accounts has left the game.

◆

118 A degrading scripted nickname for a sub who pays.

◆

119 The press uses it as a common name for submissives in findom.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

[a former participant] has seen men left broke and hungry from 'paying women to talk to them' (https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Archive (http://web.archive.org/web/20251123124217/https://www.sbs.com.au/news/the-feed/article/the-online-kink-thats-leaving-some-men-homeless-bankrupt-and-normalising-suffering/vocm5xt30)

Accessed 3 November 2026

120 Both sides know it's a performance, and a newcomer should decide beforehand which words he's okay with.

◆

121 The character a dom plays.

◆

122 It has a name, a look, a voice, rules and limits, and it keeps the real person apart.

◆

123 The persona is a performance, but the feelings of the people who meet her are real.

◆

124 A counter in gacha games that guarantees a top reward after a fixed number of pulls.

◆

125 Scene versions copy the idea, and a guarantee that sits many pulls away keeps people pulling.

◆

126 A paid private chat room or subscription tied to a persona.

◆

127 It sells access and attention and promises nothing else, so check what's included before you pay.

◆

128 One draw in a gacha-style product, and a 10x pull is ten draws at once.

◆

129 In scene tools a pull can be a single gift that gives back a random reward.

◆

130 Said of a post the platform's algorithm shows to lots of people, so it gets lots of views.

◆

131 Nobody controls it, which is why reach is mostly luck.

◆

132 A button, shortcut or menu entry that ends a tool or a remote session instantly and at no cost.

◆

133 Every tool that acts for a sub needs one that works in every state, and a tool without one isn't safe.

◆

134 How many people actually see an account's posts.

◆

135 It's an account's main asset and the main driver of a dom's income, and it depends mostly on luck and account standing.

◆

136 Changing a sub's profile picture, banner or name to a dom's branding so he advertises her.

◆

137 It's also a session format, and everyone he knows can see it, so it should be his choice and easy to undo.

◆

138 The word can also mean reshaping someone else's character into a new identity, which can upset the original owner.

◆

139 A sign that a person, a tool or an offer may be unsafe or unfair.

◆

140 In this scene the usual ones are pressure to decide now, a hidden or random total, a request for access, a fee to get verified, secrecy, stolen art and guilt lines.

◆

141 One flag means slow down, and several mean leave.

◆

142 Sending money again after deciding to stop.

◆

143 A relapser is a sub who quits and comes back several times, and it's a real warning sign of compulsive spending.

144 One press commentator compared some cases to problem gambling.

The Psychology of Financial Dominatrixes (blog post) (https://www.psychologytoday.com/us/blog/in-excess/201612/the-psychology-financial-dominatrixes)

153 The word suggests emptying someone out, and the money that leaves the account is real even when the word is play.

◆

154 A wheel-style game where a spin picks a price or a task.

◆

155 In a fair design you see the price before you pay, and random prices and forced respins are pressure designs.

◆

156 The same tool is also called a spin or a wheel.

◆

157 A word agreed when consent is given that anyone can use to stop the play at once.

◆

158 It stops play between people, and the other person stops, answers calmly and doesn't argue.

◆

159 A fake or predatory dom whose operator isn't who the persona claims, usually out to take money.

◆

160 The press reports scammers who impersonate dommes.

◆

[A domme] gets thousands from strangers she's never met. They all have one thing in common (https://www.sbs.com.au/news/the-feed/article/minki-gets-thousands-from-strangers-shes-never-met-they-all-have-one-thing-in-common/yyqp7x93n)

Archive (http://web.archive.org/web/20251123221424/https://www.sbs.com.au/news/the-feed/article/minki-gets-thousands-from-strangers-shes-never-met-they-all-have-one-thing-in-common/yyqp7x93n)

Accessed 3 November 2026

161 Every persona is fiction, so the useful test is what she asks for: access, a verification fee, secrecy or a deadline are the signs.

◆

162 A payment from a sub to a dom, often by buying a wishlist item.

◆

163 Informal forms are sends and sendies.

◆

164 The press calls a payment made without a session a silent tribute.

◆

The Curse of the Fake Financial Dominatrix (https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Accessed 3 November 2026

165 A send buys nothing, and in practice you can't get it refunded.

◆

166 The setting on the main social platform that marks media as adult, per post or for a whole account.

◆

167 A platform may put it on a whole account if posts that need it go unmarked, and a labeled account usually reaches fewer people.

◆

168 A live exchange where the dom gives orders and the sub follows, often with payments.

◆

169 In my experience a micro session lasts about five to ten minutes.

◆

170 A limit, a wait and a stop apply to every session.

◆

171 A person who gives eager attention or money to someone.

◆

172 The word is used as an insult, as a joke and as a fond label, even about yourself.

◆

173 First, a rotating pattern, the typical hypnotic image of the scene.

◆

174 Second, the spending spiral, where spending that started as play tightens turn by turn, from curious to chasing.

◆

175 If you regret it and keep spending, that's an early warning, and every turn of the spending spiral has a way out, which Where to get help helps you find.

◆

176 Short for search suggestion ban on the main social platform: the account stops showing up in search suggestions, so reach drops and a new persona struggles to grow.

◆

177 The long form is a guess from how the word is used, because no platform document spells it out.

◆

178 Checking for it every day can wear you down.

◆

179 The person who obeys and, in findom, usually spends within the game.

◆

180 The press also calls subs slaves, pets and paypigs.

◆

The Curse of the Fake Financial Dominatrix (https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Archive (http://web.archive.org/web/20260511185644/https://melmagazine.com/en-us/story/the-curse-of-the-fake-financial-dominatrix)

Accessed 3 November 2026

181 The scene counts as active only the subs who actually send, and in my experience most doms have very few.

◆

182 A person who can take either the dominant or the submissive side, depending on the partner or the mood.

◆

183 A lean ratio like 80/20 describes how much of someone's play falls on each side.

◆

184 Dominance through technology, like extensions, apps or tools, so the dom earns without putting in live effort each time.

◆

185 It's a game between consenting adults, always with a limit, a wait and a stop the sub controls.

◆

186 Remote access is never part of the game.

◆

187 Someone who chats and wants attention but never pays.

◆

188 The press reports that some dommes ask for payment before they interact, partly to keep time-wasters and fakes away.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

189 A rule stated plainly and agreed in advance is fair, but a demand for a fee to prove you're real is a red flag.

◆

190 A stored login credential that lets a program act in an account without a password or a second step.

◆

191 Treat it like a password and never share it.

◆

192 Don't mix it up with casino chips.

◆

193 A payment offered to a dom as homage.

◆

194 A domme interviewed by the press describes tribute as unconditional rather than a fee.

◆

10 Things You Always Wanted to Ask a Financial Dominatrix (https://vice.com/en/article/10-things-you-always-wanted-to-ask-a-financial-dominatrix)

Archive (http://web.archive.org/web/20260713135210/https://www.vice.com/en/article/10-things-you-always-wanted-to-ask-a-financial-dominatrix/)

Accessed 3 November 2026

195 A tribute buys nothing, and nobody can enforce a promise made in a scene.

◆

196 A small persona character that lives on the sub's screen as a companion app.

◆

197 A pet that sulks or guilt-trips him when he doesn't send is a pressure design.

◆

198 A very heavy spender, compared with a typical sender.

◆

199 The press uses the word for a big-spending client.

◆

Financial Domination Has a Scamming Problem (https://www.vice.com/en/article/financial-domination-has-a-scamming-problem)

Archive (http://web.archive.org/web/20260827104045/https://www.vice.com/en/article/financial-domination-has-a-scamming-problem/)

Accessed 3 November 2026

200 In my experience a few payers carry most of the money in the scene, so a dom's income rests on very few people, and some of them pay at difficult moments.

◆

201 A public list of gifts a creator accepts.

◆

202 Researchers describe findommes being paid in wishlist gifts.

◆

Findommes, Cybermediated Sex Work, and Rinsing (McCracken and Brooks-Gordon, Sexuality Research and Social Policy 18(4), 837-854, DOI 10.1007/s13178-021-00609-3) (https://www.ebi.ac.uk/europepmc/webservices/rest/PMC8418458/fullTextXML)

Archive (http://web.archive.org/web/20261016030740/https://pmc.ncbi.nlm.nih.gov/articles/PMC8418458/)

Accessed 3 November 2026

203 In the scene it works as a price menu and the main route for sends, and the wishlist platform has its own terms and a fee.

◆

204 The character is fiction, and the money is real.

◆

205 It's a performance, but the feelings it touches are real.

◆

206 It buys nothing, and nobody can enforce a promise made in a scene.

◆

207 In practice you can’t take it back.

◆

208 Your own spending limit, set while you’re calm, before the session, and held outside your own head.

◆

209 A fixed wait before a new decision to spend, or to raise a limit, kicks in.

◆

210 A control that ends a tool or a session instantly and at no cost.

◆

211 A sign that a person, tool or offer may be unsafe: a deadline, a hidden total, a request for access.

◆

212 It’s a red line of this wiki.

◆

213 Also the rotating pattern of hypnotic images.

◆

214 The money under it is real.

◆

215 A limit, a wait and a quick exit matter more than any title or nickname.

◆

216 Access to your computer or accounts is never part of the game.

◆

217 When a word has two senses, like spiral, the entry gives both.

◆

SOURCES • CHAPTER 1

How this wiki proves things

LAST CHECKED 3 NOVEMBER 2026 • 6 MINUTES TO READ

Every claim in this wiki has a badge that says where it comes from. This chapter explains the five levels, what each one promises, and the checks that run before a page goes out.

EVIDENCE ◆ Verified ◆ Reported ◆ Community ◆ Vivian's field notes ◆ Unverified

IN 30 SECONDS

01 Every claim carries one of five badges: Verified, Reported, Community knowledge, Vivian's field notes or Unverified.

02 Verified and Reported claims link to a source that was opened and read, with the date it was read and an archived copy.

03 Field notes are experience, written as experience, and never dressed up as a study.

04 A badge tells you where a claim comes from. It does not tell you what to do.

05 Where the evidence is thin, the wiki says so and leaves the gap open.

YOU WILL LEARN

- ✓ What each of the five badges promises, and what it does not.
- ✓ What a source has to pass before it can back a claim.
- ✓ Which checks run before release, and what each one catches.
- ✓ How to use the “Check it” box at the end of every chapter.
- ✓ What this wiki cannot prove.

> *Do not take my word for it. Every sentence here tells you where it comes from, so you can check it yourself.*
>
> — VIVIAN

PART 01

The five levels

A badge sits right after the sentence it backs, and one badge backs one claim. Each claim has its own number on the page. At the end of every chapter, the “Check it” box lists the claims with their level, the title of the source, a link, a link to an archived copy and the date the source was read.

Verified

WHAT IT MEANS

The original source says it: a study, a platform's own terms, a law, a service's own documentation.

WHAT IT TOOK TO EARN IT

The writer opened the page and read it. The box gives a link, an archived copy, the date read, and a recorded quote of at most fifteen words that was found word for word on the page.

Reported

WHAT IT MEANS

A serious secondary source says it, such as recognised press or a book. The text reads "according to" or "press reports".

WHAT IT TOOK TO EARN IT

The article was read in full. The box gives a link, an archived copy and the date.

Community knowledge

WHAT IT MEANS

People in the scene say it, in separate accounts that were read, and no study or document proves it.

WHAT IT TOOK TO EARN IT

At least two independent voices, each from a source that was read. With fewer, the claim drops to Unverified.

Vivian's field notes

WHAT IT MEANS

Vivian's account of the scene, gathered from experience and from people inside it, in general terms.

WHAT IT TOOK TO EARN IT

Her word, and nothing else. It is reviewed before release.

Unverified

WHAT IT MEANS

Plausible, but not proven.

WHAT IT TOOK TO EARN IT

Nothing. It is shown with its badge, or it is left out.

What Verified covers. The badge covers the source. A platform's terms prove what the platform states, and a study proves what its authors found in their sample. Neither proves more than that. Reported sits below Verified because a journalist stands between you and the source.

What field notes leave out. They are written in general terms, with no names and no story anyone could recognise.

V

VIVIAN'S FIELD NOTES

When I read about a scene I do not know, I trust a claim more when it says whose it is. That is why my own account has its own badge and does not pass itself off as a study.

◆

PART 02

The badges at work

Here is one sentence at each level.

- The authors of a 2021 study on findom state that academic literature on the subject is scarce.
- A press report says that findom is flooded with scammers who use stolen photos of attractive women.
- Press accounts say that for many subs the draw is the thrill of giving up control of their finances.
- In my experience, a confident sentence with no source is the one to read twice.
- No count of 2DFD personas could be found as of 2026-11-03, so any figure for it is a guess.

Read the badge before the sentence. A Verified claim and an Unverified claim can sound just as sure, and only the badge tells them apart.

PART 03

What a source must pass

A source does not back a claim just because it exists. It backs one after these steps.

From page to badge

1. A writer opens the source and reads it. A page found by search and never opened is recorded as found, not read, and it backs nothing.
2. The writer records the claim and a quote of at most fifteen words, copied from the page.
3. A tool downloads the page itself, turns it into plain text and looks for each recorded quote, ignoring case, punctuation and spacing. This step exists because the research tools writers use can return a summary of a page, and a summary can change the words. Each quote is marked verbatim, not found or fetch failed. Pages that only display in a browser are opened in a headless browser.
4. The evidence check lets a Verified or Reported marker cite a source only when its status is read and at least one of its quotes was found word for word.
5. Every outside link gets an archived copy. If a page disappears, the chapter points to the archive.

Sources that were found but never read are listed separately on the Sources page. A quote that matches a page proves that the page says it. It does not prove that the page is right, which is why the badge also says what kind of source it is.

The checks before release

Six checks run before release, and the code run applies only to chapters that contain code. They were written for this wiki and live in its `tools` folder.

Six checks

Evidence check.

It reads every page and stops on a marker that is unknown or badly formed. It stops on a Verified or Reported marker with no source behind it, a source that was not read, a Community marker with fewer than two sources, and a quote that was not found word for word. It also stops on a link to a chapter that does not exist, a dictionary word with no entry, a long dash, an exclamation mark and a contraction.

Warnings.

The same check warns about a number, an amount or a percentage in a paragraph with no marker, a paragraph of the body with no marker, and a sentence of more than forty words. It also warns about first-person plural pronouns, because the wiki speaks as Vivian or as plain reference. A warning does not stop a chapter, and a person reads each one.

Code run.

Every code example is run for real, in a throwaway copy, with a time limit. The output on the page is the output the code produced. A chapter fails if an example has no real output, or if its files changed after the run. An example that reaches the network or starts other programs is refused.

Link check.

Every outside link and every source address is requested, and an archived copy is looked up for each one. The check only reads public pages, and it never asks the archive to save anything. A dead link with no archive copy blocks release.

Metadata check.

Every PDF and every image is searched for personal information, such as author fields, hidden metadata packets, camera data, folder paths, drive paths and e-mail addresses. A second detector runs after it. Nothing ships with a name inside.

Field-note review.

Every field note is listed on a sheet with three boxes: true, safe to publish, and without risk. A note is cleared only when all three are ticked, and a release is blocked while any note is not cleared.

PART 05

The other rules

- A figure from a source never appears without a link, a date and the sentence it came from. “Thousands” counts as an Unverified claim.
- An estimate from experience is written as an estimate, with the words “in my experience”, and never as a statistic.
- A contested claim shows both sides, each with its source.
- Anything that changes, such as prices, platform rules, laws and help lines, carries the words “as of” and a date.
- A phone number for help is published only after the official site of the service was opened, and it carries the date.
- Health, money and law chapters point to the official service of the reader’s country. They give general landmarks and cannot judge your case.
- Nothing is copied from another author. Studies stay as links because their licences do not allow hosting them, and the only PDFs offered are those written here.

MYTH	FACT
~~A badge means the claim is true.~~	A badge shows where a claim comes from and how far it was checked. Even a Verified claim is only as good as its source.
MYTH	FACT
~~A claim with no source is worthless.~~	A field note is worth what experience is worth: a useful place to start, and not a measurement. Its badge says so.
MYTH	FACT
~~If the checks pass, the chapter is right.~~	The checks catch missing sources, broken links, code output that was never really produced and leaked metadata. They cannot catch a source that is wrong, which is why claims carry dates and why you should read the source yourself.

PART 06

What this wiki cannot prove

Research on findom is scarce, and its own authors say so. ◆ No study or glossary of 2DFD could be found as of 2026-11-03. ◆ That is why a large part of this wiki is field notes, and the badges show it chapter by chapter. A field note does not tell you how often something happens.

A page read on one day can change the next, so every chapter shows the date it was last checked. Where a topic has no source at all, the wiki says so, or leaves

the claim out.

A badge tells you where a claim comes from, and it guarantees nothing. What you do with a claim is your decision, and nothing here replaces advice for your own situation. See About and terms. For a tool you are about to install, see Check a tool before you install it.

TRY IT

Check yourself

QUESTION 1 OF 3

A sentence carries the Verified badge. What does that tell you?

- ◯ The claim is certainly true
- ◯ The original source was read and says it, with a quote found word for word
- ◯ A person tried it and it worked

Answer. The original source was read and says it, with a quote found word for word. Verified covers the source, and nothing beyond it.

QUESTION 2 OF 3

Which badge appears when the wiki has only one voice and no document?

- ◯ Community knowledge
- ◯ Reported
- ◯ Unverified

Answer. Unverified. Community knowledge needs at least two independent voices from sources that were read. With fewer, the claim stays Unverified.

QUESTION 3 OF 3

A field note says “in my experience, most evenings end quietly”. How should you read it?

- ◯ As a statistic
- ◯ As Vivian’s estimate from experience, not a measurement
- ◯ As a promise

Answer. As Vivian’s estimate from experience, not a measurement. Field notes are written as experience. A quantity from experience is an estimate, never a measurement.

REMEMBER IT

- Five badges: Verified, Reported, Community knowledge, Vivian’s field notes, Unverified.
- Verified and Reported claims come from sources that were opened and read, with a link, an archive and a date.
- Field notes are experience, labelled as experience.
- The checks catch missing sources, broken links, code output that is not real and personal metadata.
- A badge tells you where a claim comes from. Your decision stays yours.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

01 That is why my own account has its own badge and does not pass itself off as a study.

SOURCES AND EVIDENCE

Check it

This chapter has no claim to check yet.

EVIDENCE LEVELS

◆ Checked against the original source.

◆	Stated by a serious secondary source read in full.
◆	Widely said in the scene; no document proves it.
◆	First-hand experience, not a study.
◆	Plausible, not proven yet.

SOURCES • CHAPTER 3

About and terms

LAST CHECKED 3 NOVEMBER 2026 • 5 MINUTES TO READ

Who writes this wiki, what it will and won't do for you, and the terms it asks every reader to accept. Nothing here is advice for your situation.

EVIDENCE ◆ Vivian's field notes

IN 30 SECONDS

01 Vivian, a drawn 2D persona, writes this wiki. The person behind her stays private.

02 Vivian also makes games and software tools. This wiki doesn't rate her tools or anyone else's.

03 Nothing here is financial, legal or medical advice for anyone's situation.

04 The wiki is for adults only, and nothing in it is explicit.

05 It has no affiliation with any platform, service or publication it names.

YOU WILL LEARN

- ✓ Who writes the wiki, and what that means for how far to trust it.
- ✓ How the wiki deals with the fact that Vivian also makes tools and games.

- ✓ Where to go for advice about your own money, rights or health.
- ✓ What the age gate does and doesn't do.
- ✓ The short terms of use.

> *I'm a drawn character, so there's no face to trust. Read the terms once. They're short, and they're written to protect you first.*
>
> — VIVIAN

PART 01

Who writes this wiki

Vivian is a persona: a drawn 2D character with a name, a look and a written voice. The person who runs her stays private, and nothing in this wiki points to them.

Chapter What is 2DFD? asks you to remember that you can't know who's behind a character. That goes for this wiki too. It's why the wiki shows its sources instead of asking for your trust, and why every claim has a badge. See How this wiki proves things.

The wiki speaks as "I" in its openings, field notes and quotes. Everywhere else it's plain reference text.

PART 02

What else Vivian makes

Vivian also makes games and software tools. That's a conflict of interest, and it's better said out loud than hidden. Here's what follows from it.

- Where a chapter names something Vivian made, it says “made by Vivian”.
- The wiki doesn’t rate, rank or recommend her tools, and it has no link to buy any of them.
- The wiki doesn’t claim that any tool of hers meets the safety rules it describes. Those rules apply to her tools the same way they apply to anyone’s.
- To judge any tool, hers included, use the checks in Check a tool before you install it.
- The wiki has no accounts, comments or payments. It doesn’t ask you to send anything to anyone.

PART 03

What this wiki is for

The wiki explains 2DFD, protects the people who run into it and teaches the people who want to take part. It doesn’t sell, recruit or push anyone to send money. If a chapter ever sounds like it does, the fault is the chapter’s.

PART 04

Not advice

Nothing here is financial, legal or medical advice for anyone’s situation. The chapters give general landmarks that fit many people. Your case has details a general page can’t see, and rules differ from country to country. Prices, platform rules, laws and help lines change, so they carry a date.

Chapters on money trouble, safety and scams say this again near the top. When something here touches your own situation, use the table below.

Where to go instead

Debt, a frozen account, money you cannot cover

WHO CAN HELP

Your bank, and the official debt advice service of your country

A legal question, a threat, a blackmail attempt

WHO CAN HELP

A qualified lawyer, or the police of your country

Your health, your sleep, your mood, compulsive spending

WHO CAN HELP

A doctor, a therapist, or the official helpline of your country

Danger to yourself or to someone else, right now

WHO CAN HELP

The emergency number of your country, or a person physically near you

Spending that is hard to stop

WHO CAN HELP

The spiral and Where to get help in this wiki, then the services above

V

VIVIAN'S FIELD NOTES

I'm a persona who earns from this scene, and I can't be your safety net. The people in the table can.

◆

Free, confidential helplines exist in most countries.

Find a helpline →

PART 05

Adults only

This wiki is for adults. It explains financial domination, a kink between consenting adults. Every character it describes is an adult, with nothing child-like in her looks or setting, whatever a story says.

Nothing in the wiki is explicit. Kinks are named and explained in plain words.

The first page you open shows an age gate. It asks you to confirm you're at least eighteen, and it can't check your answer. If you're under eighteen, press "Leave". Your answer is kept in your browser's local storage, on your own device, so the gate doesn't come back on every page.

PART 06

Terms of use

The wiki names platforms, services, tools, researchers and publications only to explain something or to cite a source. It has no affiliation, partnership or endorsement with any of them. Their names belong to their owners. Sources keep their authors: the wiki links to them, quotes at most fifteen words, and never copies a text, an image or a file.

01 You may read the wiki, print its PDFs for yourself and link to any page.

02 Don’t use anything here to pressure, deceive, watch or drain anyone. Agreement doesn’t make a pressure design safe. The wiki describes pressure tactics so people can recognise and refuse them, and for no other reason.

03 The wiki gives no guarantee. Each chapter shows the date it was last checked, and a page may be out of date or wrong. Check the original source, and the official page of any service, before you act.

04 The wiki has no forms and asks for no personal data, as of 2026-11-03.

05 These terms may change. The date at the top of this page shows when they were last checked.

TRY IT

A tool you’re curious about

You read about a tool, made by Vivian or by anyone else, and wonder whether it’s safe to install. What do you do?

A Run the checks from the tool chapter yourself, as you would for any tool

The right answer. Correct. The wiki doesn’t rate her tools, so the verdict is yours, reached with the same checks you’d use for anyone’s.

B Install it, since the tool’s maker also writes the wiki

Not this one. Wrong. Sharing an author is a reason for more care. Nothing in the wiki says her tools meet its rules.

C Skip the checks because the tool carries the label “made by Vivian”

Not this one. Wrong. That label tells you who made it, and nothing about whether it’s safe.

TRY IT

Check yourself

QUESTION 1 OF 2

Who is behind the persona who writes this wiki?

- ◯ A woman who looks like the drawing
- ◯ Nobody can tell you, and the wiki doesn't say
- ◯ A group listed on the footer

Answer. Nobody can tell you, and the wiki doesn't say. The person behind the persona stays private, as with every persona. That's why the wiki shows its sources.

QUESTION 2 OF 2

A chapter on debt describes a general approach. What do you do with it?

- ◯ Follow it exactly, since it came from a careful wiki
- ◯ Use it as a landmark, and ask your bank or an official service about your own case
- ◯ Ignore it, since it's only a story

Answer. Use it as a landmark, and ask your bank or an official service about your own case. A general page can't see the details of your case. The official service of your country can.

REMEMBER IT

- Vivian is a drawn persona. The person behind her stays private.
- She also makes tools and games, and this wiki doesn't rate them.
- Nothing here is financial, legal or medical advice for your situation.
- The wiki is for adults only and has nothing explicit in it.
- It has no affiliation with any platform, service or publication it names.

SOURCES AND EVIDENCE

Check it

Every claim with its evidence level and its sources.

01 I'm a persona who earns from this scene, and I can't be your safety net. The people in the table can.
